Selected Practice Recommendations for Contraceptive Use Cambridge University Press
Cervical cancer is the second most common cancer among women worldwide. This book serves as a concise teaching manual on visual inspection with acetic acid (VIA) and with Lugol's iodine to train health personnel, especially in developing countries, with the aim to detect this disease in the early pre-invasive phase and save women's

lives. These two simple low-technology screening tests based on the ability of the trained health-care personnel to detect acetowhite areas, or yellow non-iodine uptake areas, in the cervical transformation zone are being evaluated as potential alternatives to cervical cytology.

Presents almost 100 common and uncommon gynecologic problems encountered in urgent and

emergency settings with an emphasis on practical management. Women and Health Strategic Book Publishing Dispelling the common notion that American women became activists in the fight against female cancer only after the 1970s, Kirsten E. Gardner traces women's cancer education campaigns back to the early twentieth century. Focusing on breast cancer, but using research on cervical,

ovarian, and uterine cancers as well, Gardner's examination of films, publications, health fairs, and archival materials shows that women have promoted early cancer detection since the inception of the American Society for the Control of Cancer in 1913. While informing female audiences about cancer risks, these early activists also laid the groundwork for the political advocacy and patient

empowerment movements of recent decades. By the 1930s there were 300,000 members of the Women's Field Army working together with women's clubs. They held explicit discussions about the risks, detection, and incidence of cancer and, by mid-century, were offering advice about routine breast self-exams and annual Pap smears. The feminist health movement of the 1970s, Gardner explains, heralded a

departure for female involvement in women's health activism. As before, women encouraged early detection, but they simultaneously demanded increased attention to gender and medical research, patient experiences, and causal factors. Our understanding of today's vibrant feminist health movement is enriched by Gardner's work recognizing women's roles in grassroots educational programs

throughout the twentieth century and their creation of supportive networks that endure today. Electronic Fetal Monitoring and Sonography Elsevier Health Sciences The book provides guidance for conducting a well-woman visit, based on the American College of Obstetricians and Gynecologists Well Woman Task Force recommendations. The scope of problems, the rationale for screening or

prevention, and the factors that alter screening are explained, then the recommendations are summarized, and advice is offered on their application.
