Raise the hoist to its maximum height. Open the cylinder release valve, and press the hoist back

down to its lowest position. This bleeds air from the hydraulic cylinder. Check the oil level again, and add more if necessary. Repeat this procedure until the lift functions properly. Reinsert the oil fill plug.

1. Remove the valve covers, and pick a cylinder that you are going to set the preload on.
2. Hand rotate the engine in its normal direction of rotation and watch the exhaust valve on that particular cylinder.
