Ensuring Safe School Environments: Exploring Issues--Seeking Solutions presents research findings and information about school violence, with a focus on strategies for increasing school safety. Based on a special topical issue of *Rural Special Education Quarterly*, the original journal articles have been rewritten to address safe schools from the perspective of suburban and urban, as well as rural environments.

Topics include the frequency of violence in these different settings; violence as it directly impacts school administrators; strategies for preventing and addressing violence at both the school and individual levels; and ways to work with the community both in and out of schools. Part I focuses on issues. In Part II, solutions that have been used to deal with youth violence are offered for readers to consider, including chapters on effective conflict management practices, behavioral support plans, school-community relations, the development of a caring school community as a way to decrease tendencies toward violence, and a model which demonstrates an in-practice, state-wide program designed to assist in the development of a community-focused school. Each chapter concludes with discussion questions and a case study to enhance understanding of and reflection on the issues surrounding school

violence. The text is intended as supplementary material for any course preparing school administrators. Presenting both research and practice, the text can be a guide for practicing school administrators in their search for ways to insure the safety and well being of the students whom they serve, as well as a resource for individuals in other community-based human service agencies who deal with school violence.

Systems of record (SORs) are engines that generate value for your business. Systems of engagement (SOE) are always evolving and generating new customer-centric experiences and new opportunities to capitalize on the value in the systems of record. The highest value is gained when systems of record and systems of engagement are brought together to deliver insight. Systems of insight (SOI) monitor and analyze what is going on with various behaviors in the systems of engagement and

information being stored or transacted in the systems of record. SOIs seek new opportunities, risks, and operational behavior that needs to be reported or have action taken to optimize business outcomes. Systems of insight are at the core of the Digital Experience, which tries to derive insights from the enormous amount of data generated by automated processes and customer interactions. Systems of Insight can also provide the ability to apply analytics and rules to real-time data as it flows within, throughout, and beyond the enterprise (applications, databases, mobile, social, Internet of Things) to gain the wanted insight. Deriving this insight is a key step toward being able to make the best decisions and take the most appropriate actions. Examples of such actions are to improve the number of satisfied clients, identify clients at risk of leaving and incentivize them to stay loyal, identify patterns of risk or fraudulent behavior and take action to minimize it as early as possible, and detect patterns of behavior in operational systems and transportation that lead to failures, delays, and maintenance and take early action to minimize risks and costs. IBM® Operational Decision Manager is a decision management platform that provides capabilities that support both event-driven insight patterns, and business-rule-driven scenarios. It also can easily be used in combination with other IBM Analytics solutions, as the detailed examples will show. IBM Operational Decision Manager Advanced, along with complementary IBM software offerings that also provide capability for systems of insight, provides a way to deliver the greatest value to your customers and your business. IBM Operational Decision Manager Advanced

brings together data from different sources to recognize meaningful trends and patterns. It empowers business users to define, manage, and automate repeatable operational decisions. As a result, organizations can create and shape customer-centric business moments. This IBM Redbooks® publication explains the key concepts of systems of insight and how to implement a system of insight solution with examples. It is intended for IT architects and professionals who are responsible for implementing a systems of insights solution requiring event-based context pattern detection and deterministic decision services to enhance other analytics solution components with IBM Operational Decision Manager Advanced.
