Originally, my intention was to write a "History of Algebra", in two or three volumes. In preparing the first volume I saw that in ancient civilizations geometry and algebra cannot well be separated: more and more sections on ancient geometry were added. Hence the new title of the book: "Geometry and Algebra in Ancient Civilizations". A subsequent volume on the history of modern algebra is in preparation. It will deal mainly with field theory, Galois theory and theory of groups. I want to express my deeply felt gratitude to all those who helped me in shaping this volume. In particular, I want to thank Donald Blackmore Wagner (Berkeley) who put at my disposal his English translation of the most interesting parts of the Chinese "Nine Chapters of the Art of Arithmetic" and of Liu Hui's commentary to this classic, and also Jacques Sesiano (Geneva), who kindly allowed me to use his translation of the recently discovered Arabic text of four books of Diophantos not extant in Greek. Warm thanks are also due to Wyllis Bandler (Colchester, England) who read my English text very carefully and suggested several improvements, and to Annemarie Fellmann (Frankfurt) and Erwin Neuenschwander (Zurich) who helped me in correcting the proof sheets. Miss Fellmann also typed the manuscript and drew the figures. I also want to thank the editorial staff and production department of Springer-Verlag for their nice cooperation.

Mathematics can be fun and exciting if we as teachers make it exciting and fun for our students. Our goal, as authors of this book, is to help you find creative ways to bring enjoyable mathematics material into your classroom. TAG - Tricks, Activities, and Games are ideas that we have implemented in our own teaching to help students explore, discover, conjecture, investigate, verify, explain, and understand mathematics in a creative and motivating way. It is important to arouse each student's curiosity by presenting mathematics in fresh and stimulating ways that are captivating and motivating. The ideas presented in this book are designed to help students become powerful mathematics thinkers and to help them make sense out of mathematics. Based on the NCTM Standards and NCTM's new Focal Points, we have emphasized Number and Operations, Algebra, Geometry, Measurement, and Data Analysis and Probability. We have provided objectives, materials, procedures, and solutions to the entries.

The granny square is a classic crochet pattern. It is often one of the first items a person learns to make when first learning how to crochet. Many people use the term "granny square" to refer to any type of crocheted square but this tutorial covers how to make a true granny square. There are lots of variations on this basic design. I will show you many patterns about this.

A colorful square, dissected into four parts, with hinges marked in black. If you leave the blue piece fixed and swing the others around their hinges, a new shape will emerge. Can you guess just by looking what it will be? This is just one of the tricky geometrical gems that will make a puzzler's mind work overtime. Try drawing a set of variously shaped polygons using only a compass and a ruler (no measuring allowed!), figuring out which of two sculptures is bigger (logic alone won't give you the answer), and lots more.

The 48 motifs in this book are squares or hexagons that can be tiled together to make a fabric. Also included are half motifs, which keep the integrity of the design but are only pieces of the motif. These are used to neatly fill in spaces and add shape, and they give more flexibility when building a project. Motifs in themselves can be complete projects, such as coasters or washcloths. Or multiple motifs can be added together to make something larger, including a scarf or a placemat. By stitching even more motifs together, you can even create a wrap or an afghan. The designs that can be made using motifs are limitless. As an extra bonus, the book contains symbol crochet for each motif and design. The four designs are a scarf, a hat, a cowl, and a blanket. All motifs and projects can be made using Plymouth Encore worsted-weight yarn.

A terrorist at the Moscow Film Festival plots an international incident. Built in the twilight of the Tsarist state, Moscow's Metropole Hotel is a poignant reminder of the decadence of the last regime. But today its corridors are musty, its rooms are dank, and now its restaurant is the scene of a quadruple murder. Four men—one American, one Japanese, and two citizens of Mother Russia—share a meal of smoked salmon, caviar, and two bottles of vodka. In the morning, all are found dead, blood on their lips and faces contorted in pain. To keep the killings under wraps, the Kremlin hands the investigation over to famously discreet police investigator Porfiry Rostnikov. A terrorist is targeting foreigners to embarrass the Soviet state, and the killer will happily sacrifice any Russian who gets in the way.
