Drawing on the tools of game design to fix democracy. Anyone who has ever been to a public hearing or community meeting would agree that participatory democracy can be boring. Hours of repetitive presentations, alternatingly alarmist or complacent, for or against, accompanied by constant heckling, often with no clear outcome or

decision. Is this the best democracy can offer? In *Making Democracy Fun*, Josh Lerner offers a novel solution for the sad state of our deliberative democracy: the power of good game design. What if public meetings featured competition and collaboration (such as team challenges), clear rules (presented and modeled in multiple ways), measurable progress (such as scores and levels), and engaging sounds and visuals?

These game mechanics would make meetings more effective and more enjoyable—even fun. Lerner reports that institutions as diverse as the United Nations, the U.S. Army, and grassroots community groups are already using games and game-like processes to encourage participation. Drawing on more than a decade of practical experience and extensive research, he explains how games have been integrated

into a variety of public programs in North and South America. He offers rich stories of game techniques in action, in children's councils, social service programs, and participatory budgeting and planning. With these real-world examples in mind, Lerner describes five kinds of games and twenty-six game mechanics that are especially relevant for democracy. He finds that when governments and organizations

use games and design their programs to be more like games, public participation becomes more attractive, effective, and transparent. Game design can make democracy fun—and make it work. *We Make the Image in Real Time* Dragonfly Books Provides information on creating a Web site, covering such topics as HTML, Cascading Style Sheets, JavaScript, Flash, setting up an e-commerce site, and keeping a site up-to-date.

Investigating Internet Crimes Springer After a slow and somewhat tentative beginning, machine vision systems are now finding widespread use in industry. So far, there have been four clearly

discernible phases in their development, based upon the types of images processed and how that processing is performed: (1) Binary (two level) images, processing in software (2) Grey-scale images, processing in software (3) Binary or grey-scale images processed in fast, special-purpose hardware (4) Coloured/multi-spectral images Third-generation vision systems are now commonplace, although a large number of binary and software-based grey-scale processing systems are still being sold.

At the moment, colour image processing is commercially much less significant than the other three and this situation may well remain for some time, since many industrial artifacts are nearly monochrome and the use of colour increases the cost of the equipment significantly. A great deal of colour image processing is a straightforward extension of standard grey-scale methods. Industrial applications of machine vision systems can also be sub divided, this time into two main areas, which have

largely retained distinct identities: (i) Automated Visual Inspection (A VI) (ii) Robot Vision (RV) This book is about a fifth generation of industrial vision systems, in which this distinction, based on applications, is blurred and the processing is marked by being much smarter (i. e. more "intelligent") than in the other four generations. Learn to find the

happiness that is natural to you, and enjoy better relationships, better health, more success and a longer life. The peculiar thing about us humans is, we spend a lot of time working to find people and things that will make us happy. In fact, we seem to spend the majority of our time doing this. However, there is no guarantee that any of this effort will work. There are lots of people who have hordes of people around them, and who have lots of things, but have been unable to make themselves happy. The truth is, happiness can be had with little effort. Have you ever been happy for no reason at all? Of course you have. Without anything changing in life, happiness just appears. We see it in young children all the time. In fact, we expect to see it in children. If you happen to ask a smiling child why he or she is so happy, at best the answer may be, "Because." For an adult this may be an unsatisfying answer, but for the child it is the truth -- happiness exists "just because." As we age we seem to lose touch with happiness-for-no-reason-at-all. We see a world where everyone is striving for stuff, striving for popularity, striving, striving, striving. The natural fount of happiness we once enjoyed disappears as we join them. However, that happiness is not gone. All that happened is we lost our connection to it. This book is about recovering that connection. We all grow up believing that

if we work hard, and if we are good people, we will enjoy good relationships with others, good health, success and a long life. Obviously this is not true. There are a lot of rich old people who are not happy. What we have, what we do, and the other circumstances of our lives do not provide authentic happiness. Instead, happiness comes from inside of us, and all by itself enables us to have secure relationships, good health, more success and longer lives. So, what is the secret of being happy? Being happy is a little like flipping a switch. When it 's on you are happy and when it 's off you are not. It 's so easy. How else can you explain being happy for no reason. What you need to do is

learn to turn it on, and keep it turned on. This book discusses seven practices that help you do that. There is a lot of wisdom available about how to be happy. Most of it is thousands of years old, but some is quite new. The seven practices we will look at incorporate this wisdom to help you learn how to turn on happiness in your life. This kind of happiness does not require changing anything in your life. All you have to do is learn to turn it on. Front-End Vision and Multi-Scale Image Analysis Lulu Press, Inc

"Art is inherently a reflection of the human condition. As I am working, my intention is to make images that, at the very least, capture the audience's attention. By adding layers and fracturing the images, I want the audience to see through various visual relationships. These visual relationships can be

interpreted as a metaphor of the often hectic and unstable qualities of daily life. As the human figure is my connection to the work, it also serves as the viewer's connection. The blending of media and mixing up of figurative representation with abstraction is my attempt to challenge the viewer to search for their own humanity among the clamor of everyday existence. I want to bring a sense of balance and harmony to the disorder of being. This body of work is an attempt to blend abstract expressionistic painting, collage, and

large-format, digital, inkjet printing. In the past I have always kept my life as a graphic designer separate from my life as an artist. I now feel comfortable with the idea of integrating these aspects of myself to create energetic, stimulating, and thought-provoking images. The finished pieces range in size from 36"x24" to 63"x45". Some elements in the imagery are painterly in contrast to the mechanical and digital processes that I employ. Figurative elements are combined with abstract forms. Through training, education, and practice I have come

to be a process-oriented artist. I don't intend to make art that overtly makes any kind of personal, social or political statement. The two things most important to me are the act of making the image and the image itself. This does not mean that content does not play a role in my process. As I work, I let the content emerge intuitively. I use the figure as an element of form. I use bright, contrasting and complementary colors to stimulate the image. I integrate pattern and design to create depth and motion."--Abstract. Picture Perfect CRC Press

Although

contemporary art may sometimes shock us, more alarming are recent attempts to regulate its display. Drawing upon extensive interviews, a broad sampling of media accounts, legal documents and his own observations of important events, sociologist Steven Dubin surveys the recent trend in censorship of the visual arts, photography and film, as well as artistic upstarts such as video and performance art. He examines the dual meaning of arresting images--both the nature of art work which disarms its viewers and the social reaction to it.
