Research on quotation has yielded a rich and diverse knowledge-

base. Scientific interest has been sparked particularly by the recent emergence of new quotative forms in typologically related and unrelated languages (i.e. English be like, Hebrew kaz é , Japanese mitai-na).The present collection gives a platform to research conducted within different linguistic sub-disciplines and on the basis of a variety of Western and non-Western languages. The introduction presents an overview of forms and functions of old and new quotative constructions. The nine chapters investigate quotation from different perspectives, from conversation analysis over grammaticalization and language variation and change to typological and formal approaches. The collection advocates a comprehensive approach to the phenomenon ' quotation ' , seeking a more nuanced knowledge-base as regards the linguistic properties, social uses and pragmatic functions than monolingual or single disciplinary approaches deliver. The cross-disciplinary nature and the wealth of data make the findings broadly available and relevant.

How to Drive a Stick Shift: Full Tutorial for Controlling Your Car in Every Situation

Abstract: The manual transmission (MT) automobile allows for a unique driving experience. The MT is unlike other vehicle transmissions, like an automatic or continuously variable transmission (CVT), in that the driver is in control of the transmission. The reward and appreciation of driving an MT vehicle efficiently and properly comes with the daunting challenge of learning how to properly shift gears. This gear shift skill is required to shift gears up (upshift) and down (downshift) by using the clutch pedal and the shift selector. If the driver does not perform the upshift or downshift operation smoothly (match engine and transmission speed), then the vehicle and occupants experience a noticeable and uncomfortable jolt. Since the engine and transmission are to move at a relational rate of speed, when a driveline jolt occurs there is likely an observable characteristic that may indicate an incorrect shift. This thesis project explores a proof of concept aimed to provide direct visual shift performance feedback to the driver of an MT vehicle by using visual cues (LED lights and an LCD display). The feedback system identifies an upshift or downshift while also identifying a good shift or bad shift. When a bad shift is determined, the device

defines the cause of the poor performance. This will provide the driver insight on how to improve the shift and help to identify common issues to improve. The logic of the feedback system is derived from an experiment with an experienced MT driver. Of the total 269 identified shifts, the system correctly identified 150 good and 39 bad shifts with their reason of poor performance. This resulted in an overall accuracy of 70.3%. The implementation of this device will help increase the longevity of the vehicle components by reducing transmission wear or damage while also helping new and current drivers to master the gear shift operation.

Some people call it learning how to drive stick or how to drive a manual. Whatever you call it, both are the same. Many drivers never learn how to drive a car with a manual transmission, or stick shift. The ability to drive a stick shift will allow you to drive any type of vehicle regardless of it is automatic or manual. You've heard that a driving stick gives you more control of your car in every situation, from a passing maneuver to descending a snowy hill. You've heard driving a stick shift car is more economical at the gas pump. You've heard it's more fun. But you've also heard it's hard to learn. There are gearshifts to master, your engine can stall, your car can roll backward on a hill, and understanding the clutch is a nightmare. So, what if I told you using a clutch is no more difficult than using a faucet, or that your car's handbrake is a lot more than just a 'parking brake', or that I can teach you - in one sentence - how to avoid ever stalling your engine? I've already taught thousands of people how to drive stick - men and women of all ages - normal people, not engineering students or race car engineers. And I can teach you.

This book is a US-based, prophetic-themed, " race " and culture-focused work which will serve to foster discussion on several important topics for Christians seeking to live out their faith in this present socio-political era. The foundational belief underlying this book is that we are living in an era of unique possibilities for the church to begin to make second-order changes in our views of Christianity, the church universal, and the real life applications of the theological concepts of evil and spiritual warfare as they apply to the struggles of this time in history. For Black people in the United States, racism has long been the elephant in the room during most Black/White interactions on any level. Growing expressions of racism have now forced the elephant not only to the forefront of White discourse, but the elephant now sits comfortably at the altar railing of both Black and White church sanctuaries. This book argues that we are at a critical time for action, and gives suggestions for what at least some of those educational, theological and psychological actions could be.
