To train your ear, one must learn to distinguish sounds. Acquiring Perfect Pitch requires in addition to remember pitches. In early childhood we collect the vast part of our relevant sound memory by imitating the sounds with our vocal cords. However, our brain doesn't stop there. At a later age we can still learn a new foreign language. Three new method's to acquire Absolute Pitch and Relative Pitch, supported by software feedback, are presented in this book. The first method, the Singing Funnel method, lets you acquire Absolute Pitch

like a foreign language. The second method, the Octave Anchor Pithes method helps you to orientate yourself in the pitch realm. The last method, the Interval Overtone method, improves your interval hearing. Twentieth Century Manual of Railway Veloce Publishing Ltd

New research on the adaptive behavior of natural and synthetic agents. The biannual International Conference on the Simulation of Adaptive Behavior brings together researchers from ethology, psychology, ecology, artificial intelligence, artificial life, robotics, engineering, and related fields to advance the understanding of behaviors and underlying mechanisms that allow natural and synthetic agents (animats) to adapt and survive in uncertain environments. The work presented focuses on well-defined models--robotic, computer simulation, and mathematical--that help to characterize and compare various organizational principles or architectures underlying adaptive behavior in both animals and animats. The proceedings of the eighth conference treat such topics as passive and active perception, navigation and mapping, collective and social behavior, and applied adaptive behavior.
