Project Report from the year 2016 in the subject History - World History - Basics, grade: -, , language: English, abstract: The proposed project is an anthology of readings suited for a college introductory survey course in world history to 1500. The anthology will be built around the theme of the innovative mind in history. The anthology will look at examples of significant innovations, inventions, new ideas, and new technology from prehistory to 1500. The author seeks to bring fresh new ideas and interpretations of the often routine taught survey of ancient and medieval history. The introduction will present the theme of the innovative mind, define the term and discuss the methodology as well as the learning objectives. The author wants to select from each major civilization in the world defining examples of innovation or advances in thinking. For each example the author will provide scholarly articles, excerpts from books, images, diagrams, to study and questions to lead discussions or for reflection. The rationale for this project is based upon author's years of experience in the college classroom as well as online teaching. She has observed that students' attentions are captured when explaining how a certain technology was developed or how certain modes of thought familiar today originated in history. In this way students saw a connection between the past and present. Their interest is stimulated. Students are especially interested when they recognize the connection of new ideas in antiquity and the Middle Ages throughout times and to their own present. Furthermore, the author has seen that subjects such as these are inadequately discussed in textbooks and not often covered in companion readers. The author also observed that more college students are entering into the so-called STEM (Science, Technology, Engineering, and Mathematics) fields. Examples from history of advances in scientific thinking, theorizing, and of practical application will appeal especially to these students. It can be predicted that this anthology will fill a need in the curriculum and college instructors will want to adopt it for their survey classes.

The Conscious Teacher is about all kinds of strategies and techniques educators might employ to become more effective teachers. In an accessible, conversational style, Deborah Nichols Poulos presents unique approaches to teaching that will inspire new and veteran teachers alike. She begins with her personal story of not being able to read all through elementary school. Her early failures convinced her she was dumb. At first, she struggled, but when she still failed, she adopted an avoidance strategy that served her well until junior high. An experience in the seventh grade flipped a switch and started her on a journey to becoming an outstanding student and, later, to applying the lessons she learned as a child to her own teaching. What makes The Conscious Teacher unique are the inspirational lessons that are unlike what most teachers get in their teacher-education courses or student teaching. Ms. Nichols Poulos points out, for example, that from the very first day, it is important that students learn they will be treated with dignity and respect no matter what. And especially helpful are the steps Ms. Nichols Poulos employs to set up a behavior management plan that works. She explains the strategic steps she takes before school starts—how essential it is to get to know each student before they walk into class on that first day. She also illustrates how setting up classroom routines helps students know what to expect and how to make the best use of every minute. And she emphasizes the importance of the parent-student-teacher team and includes many examples of how to communicate with—and involve—parents, even those who may be difficult. Foundational to her program are reading and writing. Among other things, she lays out the steps for students—even as early as fourth grade—to write five paragraph essays and their own student-authored books, and to research and write reports that include bibliographies. When she differentiated curriculum to support all students' needs, she found their learning accelerated. All teachers will appreciate her ideas about how to teach the basics of math, as well as advanced math concepts. And her ideas for teaching the arts are inspirational, as she describes in detail how her fourth graders performed Shakespeare's Hamlet, Macbeth, King Lear, Julius Caesar, and A Midsummer Night's Dream. She also

shows how to integrate social studies with literature and writing. Her experiences taught her that young students are much more capable than many people realize. The Conscious Teacher is an indispensable guide for all new teachers. Many of the ideas Ms. Nichols Poulos provides will also be an eye-opener for parents and experienced teachers as well. The Conscious Teacher is simply a must have for anyone truly interested in giving young children a positive and solid foundation for their later schooling.

Free Textbooks in Public Schools GRIN Verlag

Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

INTRO TO THE SOCIAL SCIENCES A

Excerpt from An Introduction to the Social Sciences, Vol. 1: A Textbook Outline This syllabus is published as it is being worked out in practice at the University of Southern California. While not in a finished form, it represents a beginning in what may be an important direction. The work of teaching in the field of the social sciences is handicapped through lack of an adequate course of study that will introduce the student to the general field and at the same time give him a comprehensive outlook. While this outline does not represent such an adequate course, it is printed in its present shape in order that it may be rapidly improved as the result of criticism. The increasing interest in the study of society and societal problems by thinking people has created a growing demand for social science courses in the colleges. The need is not entirely for upper division and graduate students, but also for college freshmen and sophomores and students in the normal schools. The general method of meeting this demand is to offer courses dealing in an apparently disconnected way with economics, government, history, et cetera. In many cases, the economist, for example, is teaching that economics is the fundamental social science and that all of the other social sciences are based upon and controlled by the economic desires of man, while in the same institution and at the same time, the historian, it may be, is teaching the same student that history and the historical method are primary to the understanding of human society. Thus the teachers and authorities in the field of the social sciences often present the rather strange spectacle of each claiming his own special social science as the most fundamental and of basing all other social sciences upon his own specialized field. Team-work among the teachers of the social sciences is still almost lacking. Anything like correlation has been generally accidental rather than scientific. Even sociology has been asking the student to postpone unifying courses in the social sciences until his senior and graduate years.
