Anthropology, fifty-two
anthropologists reflect
on scholarly writing as

both craft and
commitment. These
short essays cover a
wide range of territory,
from ethnography,
genre, and the politics
of writing to affect,
storytelling, authorship,
and scholarly
responsibility.

Anthropological writing
is more than just
communicating findings:
anthropologists write to
tell stories that matter,
to be accountable to the

communities in which they do their research, and to share new insights about the world in ways that might change it for the better. The contributors offer insights into the beauty and the function of language and the joys and pains of writing while giving encouragement to stay at it—to keep writing as the most important way to not only improve one's writing but to also honor the stories and lessons learned through research. Throughout, they share new thoughts, prompts, and agitations for writing that will stimulate conversations that cut across the humanities.

Textbooks are symbols of

People, Pens & Paper is about creative and fresh ideas. It's not a creative rule book, but a suggestive

guide of techniques and projects to make the creative process more fluid and more enjoyable for students. Often, it's our setting and mindset that determines creative output, so in order to be truly effective we need to set the scene, and that also includes within ourselves. At this initial stage of the process all we need are paper, pens and people - we keep it organic and focus on generating solutions without any interference. With the projects featured, there's a focus on seeking out solutions for our planet rather than profit and commercialism. These ideas are recorded in a simple sketch book. This book can then help form a 'portfolio' of concepts for each student, so not only do the ideas look to help our world, they also show

initiative and entrepreneurial flair, useful for life beyond school. From a marketing campaign for a local charity through to looking at ways to solve traffic issues at a school, teachers will be able to use innovative projects to inspire and also foster habitual ways to conceptualise, be it written or doodled. Readers will find no rules or quick-fixes. People, Pens & Paper is all about the process.

Despite using them every day, most software engineers know little about how programming languages are designed and implemented. For many, their only experience with that corner of computer science was a terrifying "compilers" class that they suffered through in undergrad and tried to blot from their memory as soon as they had scribbled their last NFA to DFA conversion on the final exam. That fearsome reputation belies a field that is rich with useful techniques and not so difficult as some of its practitioners might have you believe. A better understanding of how programming languages are built will make you a stronger software engineer and teach you concepts and data structures you'll use the rest of your coding days.

You might even have fun. This book teaches you everything you need to know to implement a full-featured, efficient scripting language. You'll learn both high-level concepts around parsing and semantics and gritty details like bytecode representation and garbage collection. Your brain will light up with new ideas, and your hands will get dirty and calloused. Starting from `main()`, you will build a language that features rich syntax, dynamic typing, garbage collection, lexical scope, first-class functions, closures, classes, and inheritance. All packed into a few thousand lines of clean, fast code that you thoroughly understand because you wrote each one yourself.
