The chess playing mind does not work like a machine. Selecting a move results from rather chaotic thought processes and is not the logical outcome of applying a rational method. The only problem with that, says International Master Willy Hendriks, is that most books and courses on improving at chess claim exactly the opposite. The dogma of the chess instruction establishment is that if you only take a good look at certain 'characteristics' of a position, then good moves will follow more or less automatically. But this is not how it happens. Chess players, weak and strong, don't first judge the position, then formulate a plan and afterwards look at moves. It all happens at the same time, and pretending that it is otherwise is counterproductive. There is no use in forcing your students to mentally jump through theoretical hoops, according to experienced chess coach Hendriks. This work shows a healthy distrust of accepted methods to get better at chess. It teaches that winning games does not depend on ticking off a to-do list when looking at a

position on the board. It presents club and internet chess players with loads of much-needed no-nonsense training material. In this provocative, entertaining and highly instructive book, Hendriks shows how you can travel light on the road to chess improvement!

Which side stands better? How much better? Why? Most chess players rely on loosely knit, unstructured methods to evaluate chess pieces and positions. They learn positional principles which often lead to inaccurate evaluations and faulty decisions about how to proceed. This groundbreaking book by best-selling chess author Dan Heisman addresses the evaluation and understanding of how static features affect the value of the pieces in a given position. Emphasis is placed on the static evaluation of each piece's value and its role in the overall position rather

than the assessment of a specific position, but Heisman's approach can also be applied to help evaluate entire positions by helping to answer the questions who stands better, by how much, and why?
