Abstract: The manual transmission (MT) automobile allows for a unique driving experience. The MT is unlike other vehicle transmissions, like an automatic or continuously variable transmission (CVT), in that the driver is in control of the transmission. The reward and appreciation of driving an MT vehicle efficiently and properly comes with the daunting challenge of learning how to properly shift gears. This gear shift skill is required to shift gears up (upshift) and down (downshift) by using the clutch pedal and the shift selector. If the driver does not perform the upshift or downshift operation smoothly (match engine and transmission speed), then the vehicle and occupants experience a noticeable and uncomfortable jolt. Since the engine and transmission are to move at a relational rate of speed, when a driveline jolt occurs there is likely an observable characteristic that may indicate an incorrect shift. This thesis project explores a proof of concept aimed to provide

direct visual shift performance feedback to the driver of an MT vehicle by using visual cues (LED lights and an LCD display). The feedback system identifies an upshift or downshift while also identifying a good shift or bad shift. When a bad shift is determined, the device defines the cause of the poor performance. This will provide the driver insight on how to improve the shift and help to identify common issues to improve. The logic of the feedback system is derived from an experiment with an experienced MT driver. Of the total 269 identified shifts, the system correctly identified 150 good and 39 bad shifts with their reason of poor performance. This resulted in an overall accuracy of 70.3%. The implementation of this device will help increase the longevity of the vehicle components by reducing transmission wear or damage while also helping new and current drivers to master the gear shift operation.

California. Court of Appeal (2nd Appellate District). Records and Briefs Cengage Learning This book is a US-based, prophetic-themed, “race” and culture-focused work which will serve to foster discussion on several important topics for Christians seeking to live out their faith in this present socio-political era. The foundational belief underlying this book is that we are living in an era of unique possibilities for the church to begin to make second-order changes in our views of Christianity, the church universal, and the real life applications of theological concepts of evil and spiritual warfare as they apply to the struggles of this time in history. For Black people in the United

States, racism has long been the elephant in the room during most Black/White interactions on any level. Growing expressions of racism have now forced the elephant not only to the forefront of White discourse, but the elephant now sits comfortably at the altar railing of both Black and White church sanctuaries. This book argues that we are at a critical time for action, and gives suggestions for what at least some of those educational, theological and psychological actions could be.

Some people call it learning how to drive stick or how to drive a manual. Whatever you call it, both are the same. Many drivers never learn how to drive a car with a manual transmission, or stick shift. The ability to drive a stick shift will allow you to drive any type of vehicle regardless of it is automatic or manual. You've heard that a driving stick gives you more control of your car in every situation, from a passing maneuver to descending a snowy hill. You've heard driving a stick shift car is more economical at the gas pump. You've heard it's more fun. But you've also heard it's hard to learn. There are gearshifts to master, your engine can stall, your car can roll backward on a hill, and understanding the clutch is a nightmare. So, what if I told you using a clutch is no more difficult than using a faucet,

or that your car's handbrake is a lot more than just a 'parking brake', or that I can teach you - in one sentence - how to avoid ever stalling your engine? I've already taught thousands of people how to drive stick - men and women of all ages - normal people, not engineering students or race car engineers. And I can teach you.

A powertrain system for a hybrid vehicle. The hybrid vehicle includes a heat engine, such as a diesel engine, and an electric machine, which operates as both, an electric motor and an alternator, to power the vehicle. The hybrid vehicle also includes a manual-style transmission configured to operate as an automatic transmission from the perspective of the driver. The engine and the electric machine drive an input shaft which in turn drives an output shaft of the transmission. In addition to driving the transmission, the electric machine regulates the speed of the input shaft in order to synchronize the input shaft during either an upshift or downshift of the transmission by either decreasing or increasing the speed of the input shaft. When decreasing the speed of the input shaft, the electric motor functions as an alternator to produce electrical energy which may be stored

by a storage device. Operation of the transmission is controlled by a transmission controller which receives input signals and generates output signals to control shift and clutch motors to effect smooth launch, upshift shifts, and downshifts of the transmission, so that the transmission functions substantially as an automatic transmission from the perspective of the driver, while internally substantially functioning as a manual transmission.
