How is practical change work carried out in modern organizations? And what kind of challenges, tasks and other difficulties are normally encountered as a part of it? In a turbulent and changing world, organizational culture is often seen as central for sustained competitiveness. Organizations are faced with increased demands for change but these are often so challenging that they meet heavy resistance and fizzle out. Changing Organizational Culture encourages the development of a reflexive approach to organizational change, providing insights as to why it may be difficult to maintain momentum in change processes. Based around an illuminating case study of a cultural change programme, the book provides 15 lessons on the entire change journey; from analysis and design, to implementation and how organizational members should approach change projects. This enhanced edition considers the most recent studies on organizational change practice, with new examples from businesses and the public sector, and includes one empirical study which uses the authors' own framework, enriching their practical recommendations. It also draws on the latest theoretical developments, including ideas of power and storytelling. Accompanying the text is an online pedagogic and research ideas guide available for course instructors and lecturers at Routledge.com. Changing Organizational Culture will be vital reading for students, researchers and practitioners working in organizational studies, change management and HRM.

This volume showcases some of the latest research on academic writing by leading and up-and-coming corpus linguists. The studies included in the volume are based on a wide range of corpora spanning first and second language academic writing at different levels of writing expertise, containing texts from a variety of academic disciplines (and sub-disciplines) and of different academic registers. Particularly novel aspects of the collection are the inclusion of research that combines rhetorical moves with multi-dimensional analysis, studies that cover both fixed and variable phraseological items (lexical bundles, phrase-frames, constructions), and work that is based on corpora of English as an academic lingua franca. Going beyond merely summarizing their findings, the authors also discuss what their research means for academic writing practice and pedagogical settings. The volume will be of interest to researchers, students, and teachers who would like to expand their knowledge of how academic writing functions and what it looks like in a variety of contexts.

In Writing Anthropology, fifty-two anthropologists reflect on scholarly writing as both craft and commitment. These short essays cover a wide range of territory, from ethnography, genre, and the politics of writing to affect, storytelling, authorship, and scholarly responsibility. Anthropological writing is more than just communicating findings: anthropologists write to tell stories that matter, to be accountable to the communities in which they do their research, and to share new insights about the world in ways that might change it for the better. The contributors offer insights into the beauty and the function of language and the joys and pains of writing while giving encouragement to stay at it—to keep writing as the most important way to not only improve one's writing but to also honor the stories and lessons learned through research. Throughout, they share new thoughts, prompts, and agitations for writing that will stimulate conversations that cut across the humanities. Contributors. 'I applaud the authors for this sizeable undertaking, as well as the care exercised in selecting and sequencing topics and subtopics. A major strength and salient feature of this volume is its range: It will serve as a key reference tool for researchers working in L2 composition and in allied fields.' – John Hedgcock, Monterey Institute for International Studies Synthesizing twenty-five years of the most significant and influential findings of published research on second language writing in English, this volume promotes understanding and provides access to research developments in the field. Overall, it distinguishes the major contexts of English L2 learning in North America, synthesizes the research themes, issues, and findings that span these contexts, and interprets the methodological progression and substantive findings of this body of knowledge. Of particular interest is the extensive bibliography, which makes this volume an essential reference tool for libraries and serious writing professionals, both researchers and practitioners, both L1 and L2. This book is designed to allow researchers to become familiar with the most important research on this topic, to promote understanding of pedagogical needs of L2 writing students, and to introduce graduate students to L2 writing research findings.

*Perspectives on Contemporary Issues* Taylor & Francis
Program synthesis is the task of automatically finding a program in the underlying programming language that satisfies the user intent expressed in the form of some specification. Since the inception of artificial intelligence in the 1950s, this problem has been considered the holy grail of Computer Science. Despite inherent challenges in the problem such as ambiguity of user intent and a typically enormous search space of programs, the field of program synthesis has developed many different techniques that enable program synthesis in different real-life application domains. It is now used successfully in software engineering, biological discovery, compute-raided education, end-user programming, and data cleaning. In the last decade, several applications of synthesis in the field of programming by examples have been deployed in mass-market industrial products. This monograph is a general overview of the state-of-the-art approaches to program synthesis, its applications, and subfields. It discusses the general principles common to all modern synthesis approaches such as syntactic bias, oracle-guided inductive search, and optimization techniques. We then present a literature review covering the four most common state-of-the-art techniques in program synthesis: enumerative search, constraint solving, stochastic search, and deduction-based programming by examples. It concludes with a brief list of future horizons for the field.

Paul LeBlanc has re-imagined higher education, with a focus on the most fundamental of functions: student learning. In Students First, he advocates for an entire higher education ecosystem in which students have the flexibility to gain, assess, and certify their knowledge on their own terms and timelines. In a perceptive analysis, LeBlanc provides a clear-eyed view of how and why higher education is failing to reach and serve a great many potential students. He then deftly explores how reform can address systemic inequities, improve college affordability, and broaden accessibility. Through case studies, he highlights alternative delivery models such as online, distance, and just-in-time learning, and envisions a learning environment that values competencies rather than credit hours. LeBlanc describes how these innovations and others will allow colleges and universities to help close the skills gap and respond to a rapidly evolving, technology-driven job market. Although a college education

remains one of the great drivers of socioeconomic mobility, today's higher education industry has built financial, logistical, and practical barriers that keep out the very students who are most in need of opportunity. Students First makes a persuasive case that realigning US educational priorities will enable larger populations of graduates to enjoy return on investment in the form of good pay, meaningful work, and a stable future. As the book emphasizes, such change is imperative, for in better serving its students, higher education will better serve society.

Teaching Academic Literacy provides a unique outlook on a first-year writing program's evolution by bringing together a group of related essays that analyze, from various angles, how theoretical concepts about writing actually operate in real students' writing. Based on the beginning writing program developed at the University of Wisconsin-Madison, a course that asks students to consider what it means to be a literate member of a community, the essays in the collection explore how students become (and what impedes their progress in becoming) authorities in writing situations. Key features of this volume include: * demonstrations of how research into specific teaching problems (e.g., the problem of authority in beginning writers' work) can be conducted by examining student work through a variety of lenses such as task interpretation, collaboration, and conference, so that instructors can understand what factors influence students, and can then use what they have learned to reshape their teaching practices; * adaptability of theory and research to develop a course that engages basic writers with challenging ideas; * a model of how a large writing program can be administered, particularly in regards to the integration of research and curriculum development; and * integration of literary and composition theories.
