This book describes the state-of-the art of industrial and academic research in the architectural design of heterogeneous, multi/many-core processors. The authors describe methods and tools to enable next-generation embedded and high-performance heterogeneous processors to confront cost-effectively the inevitable variations by providing Dependable-Performance: correct functionality and timing guarantees throughout the expected lifetime of a platform under thermal, power, and energy constraints. Various aspects of the reliability problem are discussed, at both the circuit and architecture level, the intelligent selection of knobs and monitors in multicore platforms, and systematic design methodologies. The authors demonstrate how new techniques have been applied in real case studies from different applications domain and report on results and conclusions of those experiments. Enables readers to develop performance-dependable heterogeneous multi/many-core architectures Describes system software designs that support high performance dependability requirements Discusses and analyzes low level methodologies to tradeoff conflicting metrics, i.e. power, performance, reliability and thermal management Includes new application design guidelines to improve performance dependability Carbon Removal, Renewable and Nuclear Energy, Volume 1 Cambridge University Press

Above all, this book focuses on the application of sociodemographic survey questions. Based on theoretical foundations, it addresses the operationalization of variables and presents socio-demographic questionnaire modules for within- and across-country comparative survey research. The book pursues three main objectives: to provide a thorough and comprehensive overview of the survey instruments currently available for the measurement of sociodemographic variables in cross-national comparative research; to offer the reader a set of harmonized international demographic standards; and to show how these standards can be implemented by the various parties involved in international comparative surveys – from the central project coordinators, to the researchers on the national survey teams, to the fieldwork agencies and their interviewers, to respondents, and eventually, to the data processing experts preparing the datasets for comparative analysis. The book offers a valuable resource for researchers, practitioners and students actively involved in producing and analyzing sociodemographic survey data. The typical readers will be social science researchers, qualified consultants and professionals interested in the field of (comparative) survey research. The book can also serve as a useful supplement to introductory textbooks on survey methodology and is suitable for Bachelor and Master students of the social sciences.

Public-private Partnerships Policy and Practice John Wiley & Sons

The issue of generational transfers is growing in importance. Populations are ageing, placing an increasing burden on provision of pensions, health care and other welfare services. In many nations the imbalance between a growing, older generation, supported by a shrinking younger generation, has fuelled debates about intergenerational justice. The key argument being that political and institutional developments over the last century have been to the advantage of older generations at the expense of current younger and future generations. But this only addresses half of the story, neglecting the flows of resources, through private, family channels. One key response to the growing fiscal problem of ageing societies has been to focus responsibility on self-funding and familial support. The growth of asset values, particularly housing, which are concentrated among the elderly, underpin such strategies. But this exposes new risks as potentially extractable resources are determined by wider fluctuations in the economy, and housing markets in particular. Clearly, these cohort effects, and responses to them, play out differently in different national developmental settings, depending on long-run patterns of economic, social and demographic change. This collection address these issues and provides original insights across different international contexts. The collection focusses on financial and non-financial transfers, generational interdependencies, and the role of labour and housing markets in welfare support, set against the changing economic landscape following the Great Financial Crisis of 2007. Although institutional and national differences exist the key emerging issues are the same: the financial and welfare challenges of supporting aging in societies; inequalities in the availability of assets across individuals, families and nations; and the extent to which private asset accumulation can support families over the life course. Drawing from examples across European countries, this collection will nonetheless be relevant to researchers and policy makers in other nations addressing the complexities of providing welfare across the life course in the face of restricted financial resources.

Over the past twenty years, the knowledge and understanding of wastewater treatment has advanced extensively and moved away from empirically based approaches to a fundamentally-based first principles approach embracing chemistry, microbiology, and physical and bioprocess engineering, often involving experimental laboratory work and techniques. Many of these experimental methods and techniques have matured to the degree that they have been accepted as reliable tools in wastewater treatment research and practice. For sector professionals, especially a new generation of young scientists and engineers entering the wastewater treatment profession, the quantity, complexity and diversity of these new developments can be overwhelming, particularly in developing countries where access to advanced level laboratory courses in wastewater treatment is not readily available. In addition, information on innovative experimental methods is scattered across scientific literature and only partially available in the form of textbooks or guidelines. This book seeks to address these deficiencies. It assembles and integrates the innovative experimental methods developed by research groups and practitioners around the world. *Experimental Methods in Wastewater Treatment* forms part of the

internet-based curriculum in wastewater treatment at UNESCO-IHE and, as such, may also be used together with video records of experimental methods performed and narrated by the authors including guidelines on what to do and what not to do. The book is written for undergraduate and postgraduate students, researchers, laboratory staff, plant operators, consultants, and other sector professionals.

Big data is presenting challenges to cybersecurity. For an example, the Internet of Things (IoT) will reportedly soon generate a staggering 400 zettabytes (ZB) of data a year. Self-driving cars are predicted to churn out 4000 GB of data per hour of driving. Big data analytics, as an emerging analytical technology, offers the capability to collect, store, process, and visualize these vast amounts of data. *Big Data Analytics in Cybersecurity* examines security challenges surrounding big data and provides actionable insights that can be used to improve the current practices of network operators and administrators. Applying big data analytics in cybersecurity is critical. By exploiting data from the networks and computers, analysts can discover useful network information from data. Decision makers can make more informative decisions by using this analysis, including what actions need to be performed, and improvement recommendations to policies, guidelines, procedures, tools, and other aspects of the network processes. Bringing together experts from academia, government laboratories, and industry, the book provides insight to both new and more experienced security professionals, as well as data analytics professionals who have varying levels of cybersecurity expertise. It covers a wide range of topics in cybersecurity, which include: Network forensics Threat analysis Vulnerability assessment Visualization Cyber training. In addition, emerging security domains such as the IoT, cloud computing, fog computing, mobile computing, and cyber-social networks are examined. The book first focuses on how big data analytics can be used in different aspects of cybersecurity including network forensics, root-cause analysis, and security training. Next it discusses big data challenges and solutions in such emerging cybersecurity domains as fog computing, IoT, and mobile app security. The book concludes by presenting the tools and datasets for future cybersecurity research.
