'Bretherick' is widely accepted as the reference work on reactive chemical hazards and is essential for all those working with chemicals. It attempts to include every chemical for which documented information on reactive hazards has been found. The text covers over 5000 elements and compounds and as many again of secondary entries involving two or more compounds. One of its most valuable features is the extensive cross referencing throughout both sections which links similar compounds or incidents not obviously related. The fifth edition has been completely updated and revised by the new Editor and contains documented information on hazards and appropriate references up to 1994, although the text still follows the format of previous editions. Volume 1 is devoted to specific information on the stability of the listed compounds, or the reactivity of mixtures of two or more of them under various circumstances. Each compound is identified by an UPAC-based name, the CAS registry number, its empirical formula and structure. Each description of an incident or violent reaction gives reference to the original literature. Each chemical is classified on the basis of similarities in structure or reactivity, and these groups are listed alphabetically in Volume 2. The group entries contain a complete listing of all the compounds in Volume 1 assigned to that group to assist cross referral to similar

compounds. Volume 2 also contains hazard topic entries arranged alphabetically, some with lists. Appendices include a fire related data table for higher risk chemicals, indexes of registry numbers and chemical names as well as reference abbreviations and a glossary.

* It has been rumored that a bumble bee has such aerodynamic deficiencies that it should be incapable of flight. Fiberglass-reinforced polymer composites, similarly, have two (apparently) insurmountable obstacles to performance: 1) Water can hydrolyze any conceivable bond between organic and inorganic phase, and 2) Stresses across the interface during temperature cycling (resulting from a mismatch in thermal expansion coefficients) may exceed the strength of one of the phases. Organofunctional silanes are hybrid organic-inorganic compounds that are used as coupling agents across the organic-inorganic interface to help overcome these two obstacles to composite performance. One of their functions is to use the hydrolytic action of water under equilibrium conditions to relieve thermally induced stresses across the interface. If equilibrium conditions can be maintained, the two problems act to cancel each other out. Coupling agents are defined primarily as materials that improve the practical adhesive bond of polymer to mineral. This may involve an increase in true adhesion, but it may also involve improved wetting, rheology, and other handling properties. The coupling agent may also modify the interphase region to strengthen the organic and inorganic boundary layers.

When surveying the computer technology available for working out mathematical problems, one fact quickly becomes apparent-most personal and super-computers are not designed for computation.

Without the aid of costly and often only partially compatible software programs, most computer operating systems cannot perform mathematical computations. Mathematics textbooks and handbooks provide useful equations, but they do not offer accessible means for evaluation. The HP48SX, an object-oriented computer containing a custom CPU and operating system, is designed specifically for this task. With a low-cost computer chip and an inexpensive calculator, the HP 48SX Engineering Mathematics Library: An Introduction to Symbolic and Complex Computation with Applications package offers users an affordable and versatile alternative for solving simple and complex problems. Key Features * Offers single-button plotting of all HP 48, MATHLIB, and all real and complex functions stored in the VAR directory-linear, semi-log and log-log lots with titles and labeled axes * Creates 36 user-defined programmable command menus, instead of offering users stock, menu-driven commands * Supports many different fields of study, (including physicists, and electrical, mechanical, and aerospace engineers), where computation ranges from basic to advanced mathematics * Provides extensive symbolic algebra, calculus, and linear algebra tools * Features menus and a manual logically built around subject areas * Allows for over 300 tabulations of complex math functions, most within 10-digit accuracy * 100 statistical operations and tests plus 50 statistical probability distributions and their inverses * 100 data and signal processing operations * 200 vector and matrix commands, plus 50 symbolic array commands * 200 algebra operations, including 3 powerful complex-coefficient polynomial root-solvers * 50 data editing, sorting, windowing, clipping, and peak and valley analysis commands * Can solve a 40 x 40 linear system of equations with iterative refinement in under 4 minutes

A comprehensive guide to the integrated detox of body, mind, and spirit • Presents a practical 28-day plant-based program, divided into four cycles, to initiate and maximize physical, mental, and spiritual detoxification • Integrates the ancient wisdom of yoga, Ayurveda, and Traditional Chinese Medicine with naturopathic principles and contemporary nutritional science • Provides plant-based smoothie and meal recipes, tips on liver health and healthy elimination, exercise and yoga practices, breathing and meditation techniques to address toxic thought patterns, and Karma/Forgiveness cleansing rituals Integrating the ancient wisdom of yoga, Ayurveda, and Traditional Chinese Medicine with naturopathic principles and contemporary nutritional science, Jonathan Glass, M.Ac., C.A.T., presents a practical 28-day program, divided into four cycles, designed to initiate and maximize detoxification of your body, mind, and spirit from the harmful effects of the modern lifestyle. Glass reveals the interconnectedness of what we consume, both mentally and nutritionally, emphasizing that cleansing of the body alone will offer only a temporary solution if we do not also apply the same cleansing principles to our thoughts and actions. He provides delicious plant-based smoothie and meal

recipes, step-by-step instructions to resolve blockages and stagnation in the physical or emotional body, including tips on liver health and healthy elimination, guidance on how to cleanse the proliferation of toxic thought patterns in the mind, as well as outlining a supportive Karma/Forgiveness cleanse ritual to detoxify the spirit. He explains how the soul is encased in five coverings, known as Koshas, and details how to harmonize all five Koshas through a plant-based diet, exercise, yoga, breathing techniques, and meditation/introspective practices. Citing wisdom from teachers he has revered over the years and sages past and present, as well as teachings from the Vedas and other ancient texts, Glass reinforces that how we eat, think, and live directly impacts our health in body, mind, spirit, and our relationships. He also shows how the principles of the Total Life Cleanse inherently support the environment. By empowering you with a new way of thinking, seeing, and being, the Total Life Cleanse program allows you not only to heal yourself by changing your life patterns but also to heal others, as we foster a deeper connection to the life that surrounds us and ultimately the universe.

Most lifting bodies, or "flying bathtubs" as they were called, were so ugly only an engineer could love them, and yet, what an elegant way to keep wings from burning off in supersonic flight between earth and orbit. Working in their spare time (because they couldn't initially get official permission), Dale Reed and his team of engineers demonstrated the potential of the design that led to the Space Shuttle. *Wingless Flight* takes us behind the scenes with just the right blend of technical information and fascinating detail (the crash of M2-F2 found new life as the opening credit for TV's "The Six Million Dollar Man"). The flying bathtub, itself, is finding new life as the proposed escape-pod for the Space Station.
