'Elish and the Wicker Tale' is a graphic novel based on the original story by Kamran Salayev. It follows the life of Elish, a young boy who has trouble communicating and coping with the world around him. Elish would rather keep to himself, doing what he loves more than anything, crafting wicker artifacts. Once trouble stirs in his world, however, Elish is set on the path of adventure, forced to step outside his comfort zone and confront his fears in order to help those around him. Elish's behavior and insecurities mirror those of children from around the globe who suffer from autism. Just like Elish, children with

autism find it hard to understand and relate to people, so they end up devoting their time to something they can understand, usually a hobby or craft such as wicker-making. Kamran Salayev's goal is to promote awareness of this subject through his book and Timur has decided to join him in that endeavor. As of spring 2020, Timur has been working on a comic/graphic novel adaptation of 'Elish and Wicker Tale'. With support from the crowdfunding campaigns, we are able to publish the graphic novel, allowing children both with and without autism to access this story in a more visual and engaging form. Sales will also contribute to the cause, with 20% of profits going directly to charities and organizations that tackle autism and make the lives of children affected by autism easier and happier.

How to update your PC BIOS in 3 easy steps National Geographic Books
In the fall of 1930, David

Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful

companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard

tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago. *What You Can Do With Your Computer* Little, Brown

Revolutionary essays on design, aesthetics and materialism - from one of the great masters of modern architecture Adolf Loos, the great Viennese pioneer of modern architecture, was a hater of the fake, the fussy and the lavishly decorated, and a lover of stripped down, clean simplicity. He was also a writer of effervescent,

caustic wit, as shown in this selection of essays on all aspects of design and aesthetics, from cities to glassware, furniture to footwear, architectural training to why 'the lack of ornament is a sign of intellectual power'. First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use

an ink jet printer, buying this book will save you money.
