Considering the pervasive immorality and high divorce rate of our contemporary Christian culture, we evidently need a biblically based, theologically compelling, practical understanding of sex, dating, and relationships. Pastors Gerald Hiestand and Jay Thomas counteract this problem with their paradigm-shifting view of purity and relationships—a view that challenges even the basic assumptions of evangelical subculture. Unlike most books on dating, this one cuts straight to the heart of

dating relationships, asserting with confidence that the line must be drawn at “no sexual activity” whatever. Few have dared to define and apply the Bible’s understanding of purity in premarital relationships to this degree, but Heistand and Thomas have done it. Furthermore, both authors are vocational pastors who communicate regularly with the target audience and have a proven ability to express biblical truth in a winsome and compelling manner. *Sex, Dating, and Relationships* adds a new, almost provocative voice to the conversation that, with straightforward theological insight, pleads with Christians to get serious about honoring Christ with their sexuality. The Definitive Vulkan™ Developer's Guide and Reference: Master the Next-Generation Specification for Cross-Platform Graphics The next generation of the OpenGL specification, Vulkan, has been redesigned from the ground up, giving applications direct control over GPU acceleration for unprecedented performance and predictability. *Vulkan™ Programming Guide* is the essential, authoritative reference to this new standard

for experienced graphics programmers in all Vulkan environments. Vulkan API lead Graham Sellers (with contributions from language lead John Kessenich) presents example-rich introductions to the portable Vulkan API and the new SPIR-V shading language. The author introduces Vulkan, its goals, and the key concepts framing its API, and presents a complex rendering system that demonstrates both Vulkan's uniqueness and its exceptional power. You'll find authoritative coverage of topics ranging from drawing to memory, and threading to compute shaders. The author especially shows how to handle tasks such as synchronization, scheduling, and memory management that are now the developer's responsibility. *Vulkan™ Programming Guide* introduces powerful 3D development techniques for fields ranging from video

games to medical imaging, and state-of-the-art approaches to solving challenging scientific compute problems. Whether you 're upgrading from OpenGL or moving to open-standard graphics APIs for the first time, this guide will help you get the results and performance you 're looking for. A provocative, handpicked collection of relevant (and surprising) essential recipes for today ' s cook. We have countless recipes at our disposal today but what are the real keepers, the ones that don ' t just feed us when we ' re hungry or impress our friends on Saturday night, but inspire us to get into the kitchen? At the forefront of American cooking for more than 20 years, the editors at America ' s Test Kitchen have answered this question in an essential collection of recipes that you won ' t find

anywhere else: 100 Recipes Everyone Should Know How to Make. Organized into three recipe sections—Absolute Essentials, Surprising Essentials, and Global Essentials—each recipe is preceded by a thought-provoking essay that positions the dish. For example, Treating Pasta Like Rice Simplifies Everything; A Covered Pot Is a Surprisingly Good Place to Roast a Chicken; and Re-imagine Pie in a Skillet to Simplify the Process. You ’ ll find useful workday recipes like a killer tomato sauce that ’ s almost as easy as opening a jar of the store-bought stuff; genius techniques for producing amazing flavor—try poaching chicken breasts over a garlic-and-soy- spiked brine (trust us, it ’ s that good); and familiar favorites reinvigorated—the best beef stew comes from Spain (and it ’ s even easier to make than the stateside stew

you ’ ve been eating for years). Gorgeous photography (shot right in the test kitchen) accompanies every recipe, revealing the finished dish as well as highlights of its preparation. Likely to stir debate among anyone interested in food and cooking, 100 Recipes Everyone Should Know How to Make provides a snapshot of how we cook today and will galvanize even the most jaded cook to get into the kitchen. The rapid growth of electronic

commerce, along with changes in information, computing, and communications, is having a profound effect on the United States economy. President Clinton recently directed the National Economic Council, in consultation with executive branch agencies, to analyze the economic implications of the Internet and electronic commerce domestically and internationally, and to consider new types of data collection and research that could be undertaken by public and private organizations. This book contains work presented at a conference held by executive branch agencies in May 1999 at the Department of Commerce. The goals of the conference were to assess current research on the digital economy, to engage the private sector in developing the research that informs investment and policy decisions, and to promote better understanding of the growth and socioeconomic implications of information technology and electronic commerce. Aspects of the digital economy addressed include macroeconomic assessment,

organizational change, small business, access, market structure and competition, and employment and the workforce. A Moment in Time Aviation Supplies & Academics Mechatronics is a core subject for engineers, combining elements of mechanical and electronic engineering into the development of computer-controlled mechanical devices such as DVD players or anti-lock braking systems. This book is the most comprehensive text available for both mechanical and electrical engineering students and will enable them to engage fully with all stages of mechatronic system design. It offers broader and more integrated coverage than other books in the field with practical examples, case studies and exercises throughout and an Instructor's Manual. A further key feature of the book is its integrated coverage of programming the PIC microcontroller, and the use of MATLAB and Simulink programming and modelling, along with code files for

downloading from the accompanying website. * Integrated coverage of PIC microcontroller programming, MATLAB and Simulink modelling * Fully developed student exercises, detailed practical examples * Accompanying website with Instructor's Manual, downloadable code and image bank

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-

date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.
