In the nineteenth century, the Irish population was halved. The Great Shame is Thomas Keneally's astonishing work of non-fiction which traces the three causes of this depletion: the famine, the emigrations, and the transportations to Australia. Based on unique research among little-used sources, this masterly book traces eighty years of Irish history, told through the intimate lens of political prisoners - some of them Keneally's ancestors who served time as convicts in Australia. Beginning with Hugh Larkin, a twenty-four-year-old 'Ribbonman' transported for life in 1834, The Great Shame tells of the Ireland these prisoners came from and the Australia they encountered. It brings us close to Irish women such as Esther, wife of Larkin, and the future Lady Wilde, mother of Oscar, friend and collaborator of notable Irish prisoners. But we also encounter the 'Female Factory' and the Irish convict women who married humble Protestant criminals, and we learn of the often desperate survival methods of 'transportation-widowed' women left in Ireland. Throughout the nineteenth century, Australian and American organisations participated in the extraordinary escapes or attempted escapes from Australia of some of the world-famous Irish politicals. Among these was William Smith O'Brien, nobleman, leader of an uprising at the height of the Irish Famine, who became, from solitary confinement in Van Dieman's Land, the Mandela of his age. Thomas Francis Meagher's spectacular escape led to a glittering American career as orator, Union general, and tragic Governor of Montana. John Mitchel, Meagher's friend in Van Dieman exile, became a Confederate newspaper man, gave two of his sons to the Confederate cause, was imprisoned with Jefferson Davis, but emerged to reinfiltre Ireland and become member for Tipperary. Through many such lives, famous and obscure, we see not only the daily experience of famine sufferers and Irish activists, but also the astonishing history of the Irish diaspora: to Saint Lawrence, to New York, to the high plains of Montana and the bush towns of New South Wales. All of them are vividly present in this extraordinary tale of Australian imprisonment, Irish disaster and New World redemption.

Overall Equipment Effectiveness (OEE) is a

crucial measure in TPM that reports on how well equipment is running. It factors three elements ---the time the machine is actually running, the quantity of products the machine is turning out, and the quantity of good output – into a single combined score. Directly addressing those who are best positioned to track and improve the effectiveness of equipment, OEE for Operators defines basic concepts and then provides a systematic explanation of how OEE should be applied to maximize a piece of equipment's productivity and recognize when its efficiency is being compromised.

The line began forming after eight o'clock. Sal, short and heavy-set, kept everyone busy. Neat, in a white shirt and sports jacket, with his grey fedora cocked to the side, his crooked grin made you smile. Without warning the heavy door would swing open and the waiters would come outside to join him. They were dressed in pajamas or prison garb, with hats and horns, and were there to warm up the crowd. Some in line expected this, others were shocked. The pink polka dot building should have been a warning. Complete strangers in line became chummy, exchanging stories they had heard; toilet seat covers to serve drinks on, microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

Women suffer from headaches far more than men. According to the World Health Organization, migraine is one of the most disabling medical conditions. The understanding of the pathophysiology of migraine has changed

dramatically over the past decade, leading to more rational and targeted treatments. Since most migraineurs are young women, use of contraception, management of headaches with menstruation, pregnancy, lactation, and menopause are important issues addressed in this text.

Headaches are often inherited, and, as such, the book also discusses genetic issues, particularly relevant in this era of customized medicine. The hormonal management of transgenders is important as many will experience severe headaches during their transitions. Comorbidities, including psychiatric syndromes and strokes, are also presented in detail. This text will be of interest to all practitioners who manage women with headaches.

In an era of ubiquity, nomadism and ecological challenge, the maturity of wireless technologies, the readiness of broadband Internet access and the popularity of smart terminals should contribute to emancipating IT services in connection with the home and home-based resources. This book, in light of several years of applied research and technological surveys, aims at describing the digital home networking environment, its techniques, and the challenges around its service architecture.

Digital Home Networking aims to provide a broad introduction to state-of-the-art digital home standards and protocols, as well as an in-depth description of service architectures for entertainment and domotic services involving digital home resources. The book covers aspects such as networking, remote access, security, interoperability, scalability and Quality of Service. Notably, it describes the generic architecture, which was proposed and developed in the context of the EUREKA/Celtic research project "Feel@Home".
