This book provides a novel and holistic perspective on the deployment of prepaid electricity meter technology among energy impoverished (vulnerable) households based in developing or under-developed communities of Sub-Saharan Africa. It explores and reviews the nexus between the technology and socio-economic development, technology acceptance and rejection in low-income households, and ultimately proposes a contextual model to avert or assuage energy poverty in the region using the technology. Science is applied as a convenient, valid, and reliable model to generate bespoke, contextual, and relevant knowledge for policy makers on the

---

development of prepaid meter market in the region. The knowledge shared contributes to extant discourse and debates around the effectiveness of the technology within indigent household settings. The book is intended for energy/electricity utilities, prepaid electricity businesses, policy developers, and other interested parties whose work is related to prepaid electricity meters.

This is not a book about algorithms. This is not a book about architecture. This is not a book about frameworks. This is not even a book about project management, agile or otherwise. This is a book about "the other things" that are important to writing and maintaining a sustainable code base. It's also a book about automation of parts of the programming process. If you're a CTO, the economic case for "code quality plus automation" is already strong, and getting stronger

---

with each new iteration of hardware. If you're a programmer (maybe aspiring to be a CTO), it's about being able to concentrate on the stimulating, interesting, and creative parts of the craft, and getting the tedious parts done for you. Much of the book is about the general craft of programming and helping programmers become more productive, and should be useful no matter what programming language(s) you've chosen. However, I find it works better to illustrate principles with examples. And this edition of the book picks examples from the PHP programming language.

Here is a portrait of the poet by his wife which has no equal, not even in Mary Shelley's sketches of her husband. New

Statesman Under Storm's Wing collects all that Helen

Thomas (1877-1967) wrote about the poet Edward Thomas (1878-1917): the celebrated volumes *As It Was* and *World Without End*, her letters to Edward, and separate memoirs of her meetings with W.H. Davies, D.H. Lawrence, Ivor Gurney, Eleanor Farjeon, Robert Frost and W.H. Hudson. The book has been assembled by Myfanwy, the youngest daughter of Edward and Helen. Myfanwy includes her own enchanted account of childhood with her father, and the tragedy of his death at the Battle of Arras in 1917. She adds an appendix of six letters from Robert Frost to Edward Thomas. Helen wrote *As It Was*, the story of her courtship and early marriage, shortly after Edward's death, and *World Without End* a few years later. In the original editions and later reprints fictitious names were used for the protagonists. In this edition the actual names are restored. The book provides a brilliant, lasting evocation of

one of Britain's best-loved  
poets.
