The late 1980s, revolutionary advances in digital halftoning enabled inkjet printers to achieve much higher image fidelity. The rapid rate of progress has resulted in numerous breakthroughs scattered throughout the literature, rendering old technologies obsolete and renewing the need for a centralized source on the current state of the art. Entirely revised and updated, Modern Digital Halftoning, Second Edition provides an integrated and up-to-date treatment of stochastic halftoning and digital printing. Using full-color illustrations to enhance the text, this edition incorporates new topics as well as updated models, algorithms, and methods used to construct and improve the quality of green-noise, blue-noise, and multitone images. Following a review of various halftoning techniques, this edition now covers amplitude modulated dither arrays, adapting to human visual models, direct binary search, and handling stochastic moiré problems. It also presents a new chapter on lenticular printing, a means for printing color holographic images. Accompanying downloadable resources contain MATLAB® software files and illustrated examples employing algorithms, statistics, and other key concepts from the book. Documenting the development of digital printing since the first edition, Modern Digital Halftoning, Second Edition offers a well-rounded and accurate perspective on the technological capabilities of digital printing and provides all the necessary tools for continuing research in the field.

The deployment of communications networks and distributed computing systems requires the use of open, standards-based, integrated management systems. During the last five years, the overall industry effort to develop, enhance, and integrate management systems has crystallized in the concept of management platforms. Management platforms are software systems which provide open, multi vendor, multiprotocol distributed management services. They allow multiple management applications to run over core platform services which constitute the essential part of the management platform framework. This book provides a comprehensive analysis of the features and technical characteristics of distributed management platforms by examining both qualitative and quantitative management capabilities required by each management platform service. The analysis covers the management platform run-time environment, the operational aspects of using management platforms, the development environment, which consists of software toolkits that are used to build management applications, the implementation environment, which deals with testing interoperability aspects of using management platforms, and of course the distributed applications services which platforms make available to management applications. Finally, the analysis covers the capabilities of several management applications, either generic or specific to devices or resources which run on top of management platforms.

This much-needed book offers trainers, consultants, evaluation professionals, and human resource executives and practitioners a hands-on resource for understanding and applying the proven principles of confirmative evaluation. Confirmative evaluation is a marriage of evaluation and continuous improvement. Unlike other types of evaluation—which are used during the design of a learning program or applied immediately after conducting a program—confirmative evaluation follows several months after the program is implemented. It tests the endurance of outcomes, the return on investment, and establishes the effectiveness, efficiency, impact, and value of the training over time.
