This research report analyses the impact of information technology on policing, using the QPS as a case study. It examines the extent to which the implementation of information technology has modified the accountability structure and the occupational culture of policing and whether information technology has significantly altered police practices at the street, supervisory and management levels.

The organization, functioning, and the role of libraries in university communities continue to change dramatically. While academic research libraries continue to acquire information, organize it, make it available, and preserve it, the critical issues for their management teams in the twenty-first century are to formulate a clear mission and role for their library, particularly as libraries transition to meet the new information needs of their university constituents. Building a Virtual Library addresses these issues by providing insight into the current changes and developments within the area of library science.

Since the time of domestication more than 10,000 years ago, cattle have played an increasingly crucial role in the development of human civilizations. Progress has been quite remarkable since the turn of the century; the sequencing of the bovine genome in 2009 launched new avenues for furthering our understanding of theoretical and practical aspects of cattle genetics. Covering a vast array of questions, this book reviews major topics from molecular and developmental genetics, disease resistance and immunogenetics to genetic improvement of dairy and beef breeds, addressing all current problems in the field. This second edition includes a new team of authors and completely new chapters on the genetics of fat production, nutrition, feed intake and efficiency, growth and body composition. Fully updated throughout, it provides a valuable resource on cattle genetics for researchers, breeders, veterinarians and postgraduate students.

This book constitutes the proceedings of the First Indo-Japanese conference on Perception and Machine Intelligence, PerMIIn 2012, held in Kolkata, India, in January 2012. The 41 papers, presented together with 1 keynote paper and 3 plenary papers, were carefully reviewed and selected for inclusion in the book. The papers are organized in topical sections named perception; human-computer interaction; e-nose and e-tongue; machine intelligence and application; image and video processing; and speech and signal processing.

The authors trace the emergence of Ataturk and Reza Shah through the constitutional revolutions in Iran and the Ottoman Empire, which led to the introduction of European social models, the establishment of dictatorship and of secularist reforms. This produced in both Turkey and Iran highly authoritarian, nationalist, and quasi-westernised states, where the personality cult of the leader defined the politics of each country."

It can be stated with some justification that polymers, because of their mainly synthetic origins, are important because of their applications, perhaps more than in the case of more familiar and conventional materials such as metals and wood, which would exist apart from their use in human activities. The majority of polymers have been synthesized under the impetus of requirements for new and improved properties. The preparative routes to new polymers and blends, and the exploration of their structures and properties constitute absorbing subjects for study, but it is the final application of these materials in real, commercial products that provides the driving force for such developments. In recent years a number of excellent books have appeared which deal with the chemistry, structure, properties and engineering aspects of polymers. The processing of polymers, as products of the chemical industry, into engineering and consumer goods has received much less attention. There are some valuable texts for individual processes, especially the extrusion and injection moulding of thermoplastics, but others are

less well served. This book provided a review of all the important processing routes for transforming polymers into products.

Certificate Practical Physics

This book describes the fundamental scientific principles underlying high quality instrumentation used for environmental measurements. It discusses a wide range of in situ sensors employed in practical environmental monitoring and, in particular, those used in surface based measurement systems. It also considers the use of weather balloons to provide a wealth of upper atmosphere data. To illustrate the technologies in use it includes many examples of real atmospheric measurements in typical and unusual circumstances, with a discussion of the electronic signal conditioning, data acquisition considerations and data processing principles necessary for reliable measurements. This also allows the long history of atmospheric measurements to be placed in the context of the requirements of modern climate science, by building the physical science appreciation of the instrumental record and looking forward to new and emerging sensor and recording technologies.

In the Blue Pike -- Volume 03

This paper is a response to discussions of digitization at meetings of the National Humanities Alliance (NHA). NHA asked the Council on Library and Information Resources (CLIR) to evaluate the experiences of cultural institutions with digitization projects to date and to summarize what has been learned about the advantages and disadvantages of digitizing culturally significant materials. Findings revealed that digitization often raises expectations of benefits, cost reductions, and efficiencies that can be illusory and, if not viewed realistically, have the potential to put at risk the collections and services libraries have provided for decades. One such false expectation--that digital conversion has already or will shortly replace microfilming as the preferred medium for preservation reformatting--could result in irreversible losses of information. This paper defines digital information; identifies weaknesses of digitization as a preservation treatment; discusses the benefits and drawbacks of digital technology for access; and highlights issues institutions must consider in contemplating a digital conversion project.
