My main purpose in writing this book is to show how different things may have been created or will take place in reality and prepare for it. Some of the things that we believe in may have already taken place. If things have taken place that pertains to our salvation, then we need to believe them. The main thing that we need to do is to be prepared and help others to meet Christ at his coming, or when we die. That should be the desire of all of us that follow Christ. I believe the First Resurrection started at the resurrection of Christ and will end at his coming. You must believe this because Christ paid the price in full by dying on the cross.

The goal of this text is to describe the technical design aspects of the IT infrastructure; it does not give the details of installing and customizing SAP software, nor business process reengineering. Using primarily HP products for the solution examples, the chapters guide the reader through the foundation of the systems from an IT perspective, reviews its business application and architecture and introduces the server systems, then describes data storage, high availability and recovery solutions, client PCs with front-end user interfaces, output management and printing solutions, network infrastructure and requirements, cabling designs, LANs and WANs, and connecting mySAP.com to the Internet. Both authors are members of the HP-SAP International Competence Center. Annotation copyrighted by Book News, Inc., Portland, OR
