In the fall of 1930, David Packard left his hometown of Pueblo, Colorado, to enroll at Stanford University, where he befriended another freshman, Bill Hewlett. After graduation, Hewlett and Packard decided to throw their lots in together. They tossed a coin to decide whose name should go first on the notice of incorporation, then cast about in search of products to sell. Today, the one-car garage in Palo Alto that housed their first workshop is a California historic landmark: the birthplace of Silicon Valley. And Hewlett-Packard has produced thousands of innovative products for millions of customers throughout the world. Their little company employs 98,400 people and boasts constantly increasing sales that reached \$25 billion in 1994. While there are many successful companies, there is only one Hewlett-Packard, because from the very beginning, Hewlett and Packard had a way of doing things that was contrary to the prevailing management strategies. In defining the objectives for their company, Packard and Hewlett wanted more than profits, revenue growth and a constant stream of new, happy customers. Hewlett-Packard's success owes a great deal to many factors, including openness to change, an unrelenting will to win, the virtue of sustained hard work and a company-wide commitment to community involvement. As a result, HP now is universally acclaimed as the world's most admired technology company; its wildly successful approach to business has been immortalized as The HP Way. In this book, David Packard tells the simple yet extraordinary story of his life's work and of the truly exceptional company that he and Bill Hewlett started in a garage 55 years ago.

InfoWorld also celebrates people, companies, and projects. **Day of the Dead** Yale University Press Bachelor Thesis from the year 2012 in the subject Business economics - Miscellaneous, grade: 1,5, Furtwangen University (HFU Business School), language: English, abstract: The subject of this work is to give the reader a detailed overview of the current state of the All-in-One PC market for German consumers. The author questions the public perception of All-in-One PCs in the consumers' minds. Also, the use and acceptance of touch technology for large screen devices is studied. The purpose of this thesis is to analyze how All-in-One PCs can be effectively marketed in an industry that focuses more and more on mobile computing devices. In the first part an introduction to the desktop PC market and touch screen technology is given. Then, the theoretic concepts of strategic marketing and techno-ready marketing are discussed within a hypercompetitive and innovation-driven industry. The research part consists of a thorough market and competitive analysis of the All-in-One PC market in Germany. In addition, a conducted opinion survey provides valuable insights from a consumer perspective. The findings of the research are afterwards evaluated and interpreted. Thereupon, the originally outlined problem is reassessed and recommendations are given to HP Germany, the cooperating company of this thesis, on how to adjust respective marketing activities for technological innovative products. Finally, a market outlook weighs the opportunities and threats that lie ahead for the product category All-in-One PC. The last chapter summarizes the

key learnings of this thesis, how it benefits the cooperating company and ends with a brief personal assessment about the topic by the author. The results of the market analysis suggest that HP can improve its brand preference and that people are not aware enough of the product All-in-One PC and its features and benefits. A more educative marketing approach is proposed by adding a 5th P - for pedagogy - to the traditional marketing mix.
