Few technological advances have affected the lives and dreams of individuals and the operations of companies and governments as much as the continuing development of flight. From space exploration to package transport, from military transport to passenger helicopter use, from passenger jumbo jets to tilt-rotor commuter planes, the

future of flying is still rapidly developing. The essays in this volume survey the state of progress along several fronts of this constantly evolving frontier. Five eminent authorities assess prospects for the future of rotary-wing aircraft, large passenger aircraft, commercial aviation, manned spaceflight, and defense aerospace in the post-Cold War era. Zoo-Looking Prentice Hall Professional This book is an exciting history of the personal computer revolution. Early personal computing, the "first" personal computer, invention of the microprocessor at Intel and the first microcomputer are detailed. It also traces the evolution of the personal computer from the software hacker, to its use as a consumer appliance on the Internet. This is the only book that provides such comprehensive coverage. It not only describes the hardware and software, but also the companies and people who

made it happen.

"Music Saved Them, They Say tells about the role music-making has played in community projects offered to young people in the poverty-stricken and often violent surroundings of Kinshasa, DR Congo. The young musicians described came out of complicated backgrounds - young adult men who were members of violent gangs, and young adult men and women who were as so-called 'witch'-children living in the streets. They believe that becoming musicians played an important role in (re-)constructing their lives, and they expressed this by saying that they were "saved by music". This book shares the findings of 3-1/2 years of research, with the hope to see the social music projects in Kinshasa inspire others to develop similar initiatives... in Kinshasa and elsewhere"--

The IBM® DB2® Analytics Accelerator Version 2.1 for IBM z/OS® (also called DB2 Analytics Accelerator or Query Accelerator in this book and in DB2 for z/OS documentation) is a marriage of the IBM System z® Quality of Service and Netezza® technology to accelerate complex queries in a DB2 for z/OS highly secure and available environment. Superior performance and scalability with rapid appliance deployment provide an ideal solution for complex analysis. This IBM Redbooks® publication provides technical decision-makers with a broad understanding of the IBM DB2 Analytics Accelerator architecture and its exploitation by documenting the steps for the installation of this solution in an existing DB2 10 for z/OS environment. In this book we define a business analytics scenario, evaluate the potential benefits of the DB2 Analytics Accelerator appliance, describe the installation and integration steps with the DB2 environment, evaluate performance, and show the advantages to existing business intelligence processes.

[If only] Bran would stop acting weird....Probably he had a perfectly reasonable explanation for everything. I just couldn't imagine what it would be. When Britt's older brother, Bran, lands a summer job house-sitting for the Marquises, an elderly couple, it seems like a great opportunity. Britt and Bran have moved to Florida so their mother can finish college, and the house-sitting income will allow their mom to quit her job and take classes full-time. Having never lived in a real house before, Britt is thrilled. There's only one problem: Britt starts to suspect her family isn't supposed to be there. She's been noticing that Bran is acting weird and defensive -- he hides the Marquises' mail, won't let anyone touch the thermostat, and discourages Britt from meeting any of the neighbors. Determined to get to the bottom of things, Britt starts investigating and makes a startling discovery -- the Marquises aren't who Bran has led her and their mom to believe. So whose house are they staying in, and why has Bran brought them there? With unexpected twists and turns, award winner Margaret Peterson Haddix has again crafted a thriller that will grip readers until its stunning conclusion.

This book highlights the case of Brazil, a major economic player among developing countries. In seventeen years of enforcing the Brazilian Antitrust Law, Brazil's

Administrative Council for Economic Defence (CADE) has achieved outstanding results and has been recognized as the most effective antitrust enforcement agency in the developing world. This book is the first to describe and analyse the workings and case law of the CADE, emphasizing the agency's fundamental methodology and focusing on the contributory roles of such factors as the following: mechanisms and procedures of enforcement of the Antitrust Law in Brazil; methodologies (tests) used for antitrust assessment (for merger and conduct controls); evaluation of barriers to entry and rivalry in analysed markets; assessment of proof and circumstantial evidence within CADE case law and court decisions; examination of rational justifications for practices under investigation; legality of exchange of information; leniency agreements; cease and desist agreements; cultural issues and modifications; civil and criminal enforcement; private damages considerations; and the role of international and regional competition law regimes (OECD, UNCTAD, WTO, ICN, Mercosur). The book's consolidated research on Brazil's cartel investigations clearly describes the main defence theories and the courts' decisions. The authors also explore the relationship of Brazil's antitrust law to the country's public policies in the areas of consumer rights, public procurement, and measures against corruption, with special emphasis on the synergies arising from antitrust law and consumer protection. It is worth noting that the studies carried out in this book discussed Law No. 8884/94 (Brazilian Antitrust Law) and the New Brazilian Antitrust Law, which was passed on 5 October 2011 and which will be enforced in 2012. With its unique synthesis

of constitutional law, comparative antitrust law, and CADE's case law, this book will be welcomed by competition lawyers and other parties interested in methods and procedures used in merger and conduct control, and especially in anti-cartel enforcement, in developing countries.

"The "Computers Nobody Wanted" is a history of an ill-conceived acquisition, in 1969, of Xerox's entry into the computer business to its subsequent abandonment. The text discusses attempts to convert a superior scientific computer to replace Xerox' own IBM computers that were processing business applications. The author was responsible for managing these conversions against technical obstacles that could not be overcome. After spending tens of millions for technology improvements, Xerox decided to exit from the computer business. The book also traces investments in a computer workstation - the STAR computer - from conception in 1973 to its dissolution in 1984. It describes the pioneering research at the Xerox PARC (Palo Alto Research Center) and how an inspired group produced superb innovations that were of no commercial value. During this epoch Strassmann was Vice-President of Strategic Planning for the Information Products Group that was responsible for transfer of PARC results to the marketplace.

Nurses and midwives have a professional responsibility to keep up-to-date with current research impacting on their clinical practice. They require the skills and knowledge to read and understand research reports, evaluate the

quality of the research, synthesise different research studies, apply the most appropriate findings to their clinical practice and be able to evaluate its effectiveness. This book presents a unique approach to teaching the principles of health research using practical case studies with which students can identify and engage. The book covers core concepts and principles including: - what evidence is and why understanding research is vital - finding reliable sources of evidence - the nature of the research process - understanding quantitative and qualitative research - ethical considerations - using research to guide clinical practice.

Throughout the book, activities, summaries and review questions help ground theory in real life scenarios, highlighting how evidence-based practice can be applied in every aspect of nursing care. 'The text is highly readable while achieving the aim of familiarising the reader with the language of, and process for, doing research. It is logically organised and ... guides reader learning using a variety of techniques that reinforce [the] information presented and challenge thinking.' Alan Kefauver's "Audio Recording Handbook" is a comprehensive guide which covers every aspect of the recording process. Following a discussion of sound, Kefauver explores loudspeakers and microphones and also current audio signal processing devices. He covers at length issues of reverberation, equalizers, compressors, noise reduction, and other processes for recording and editing sound. "The Audio Recording Handbook" includes sections devoted to analog and digital audio systems, digital editing workstations, tape recorder alignment, and synchronization systems. In addition, Kefauver discusses the features of both analog and digital recording consoles, as well as various console automation systems. Throughout the book, applications to surround sound formats are addressed. One of the most useful parts of The Audio Recording Handbook is the discussion of the recording, mixdown, and editing sessions, which brings together everything covered in the text clearly and effectively.
