To be human is to be in relationships. We can't survive without them but it's in relationships that we can so easily get

---

unravelling. Some relationships just seem to do us in. Either we feel like we lose ourselves or feel burnt out from futile efforts to make things right for another. In our relationships we can experience the very best of ourselves and the very worst. The message of *Growing Yourself Up* is that you can't separate understanding the individual from understanding relationships. All of life's relationships are integral to increasing self-awareness and maturity. And it's not necessarily the comfortable relationships that promote personal growth. In this 2nd

edition of the bestselling book, Jenny examines how to help others without fostering dependency, and how to determine what kind of help you or others want from therapists. This is in response to the many lay and professional people who have found this book valuable personally and want to know how to help others grow. Drawing from Bowen family systems theory, the book takes you on a journey through each stage of life to see predictable patterns of relationships and to show how to use this knowledge to make purposeful

adjustments in yourself; as well as lending a mature helping hand to others. The result is a sturdier self, sturdier relationships and a refreshing new way to view life's challenges and opportunities.

"This book approaches the subject of material and energy balances from two directions. First, it emphasizes the fundamental principles of the conservation of mass and energy, and the consequences of these two principles. Second it applies the techniques of computational chemistry to materials processing, and introduces new software

---

developed by the author especially for material and heat balances. The third edition reflects the changes in the professional engineer's practice in the last 30 years, reflecting the dramatic shift away from metallurgical engineering and the extractive industry towards materials engineering. A large and growing number of recent graduates are employed in such fields as semiconductor processing, environmental engineering, and the production and processing of advanced and exotic materials for aerospace, electronic and structural applications. The advance in computing power and software for the desktop computer has significantly changed the way engineers make computations, and

the biggest change comes from the computational approach used to solve problems. The spreadsheet program Excel is used extensively throughout the text as the main computational "engine" for solving material and energy balance equations, and for statistical analysis of data. The use of Excel and the introduction of the add-in programs enables the study of a range of variables on critical process parameters, and emphasis is placed on multi-device flowsheets with recycle, bypass, and purge streams whose material and heat balance equations were previously too complicated to solve by the normally-used hand calculator. The Excel-based program FlowBal helps the user set up material and heat

balance equations for processes with multiple streams and units"--

Elementary Hydraulics is written for the undergraduate level and contains material to appeal to a diversified class of students. The book, divided into three parts, blends fluid mechanics, hydraulic

science, and hydraulics engineering. The first part of the text draws upon fluid mechanics and summarizes the concepts deemed essential to the teaching of hydraulics. The second part builds on the first section while discussing the science of hydraulics. The third section looks at the engineering practice of hydraulics and illustrates practical applications of the material covered in the text. In addition to these applications, the text contains a number of numerical problems and a reading aid at the end of each chapter to enhance student learning.

Rising young comedian Moshe Kasher is lucky to be alive. He started using drugs when he

was just 12. At that point, he had already been in psychoanalysis for 8 years. By the time he was 15, he had been in and out of several mental institutions, drifting from therapy to rehab to arrest to...you get the picture. But *KASHER IN THE RYE* is not an "eye opener" to the horrors of addiction. It's a hilarious memoir about the absurdity of it all. When he was a young boy, Kasher's mother took him on a vacation to the West Coast. Well it was more like an abduction. Only not officially. She stole them away from their father and they moved to

Oakland , California. That's where the real fun begins, in the war zone of Oakland Public Schools. He was more than just out of control-his mother walked him around on a leash, which he chewed through and ran away. Those early years read like part Augusten Burroughs, part David Sedaris, with a touch of Jim Carrol...but a lot more Jewish. In fact, Kasher later spends time in a Brooklyn Hasidic community. Then came addiction... Brutally honest and laugh-out-loud funny, Kasher's first literary endeavor finds humor in even the most horrifying

situations.

Reexamining a classical work of social anthropology, *African Political Systems* (1940), edited by Fortes and Evans-Pritchard, this book looks at

the colonial and academic context from which the work arose, as well as its reception and its subject matter, and looks at how the work can help with analysis of current politics in Africa. This book critically reflects upon the history of anthropology. It also contributes to a political anthropology which is aware of its antecedents, self-reflexive as a discipline, conscious of pitfalls and biases, and able to locate itself in its academic, social and political environment.

It is an acknowledged if not accepted fact that all European societies are being fundamentally transformed, and indeed perceptively unsettled, by increased migrations across nations and by the asserted presence of established minorities within their borders. The scale and speed at which these transformations have taken place have brought in their wake considerable social impacts and no small measure of fear and anxiety. Encounters with such diversity are part and parcel of the social work task, and learning how to negotiate them should be a de facto aspect of the training and continuous professional development of social workers

and other social professions. However, the moral and political dimensions of the role, scope and nature of the social work task in responding appropriately to these changed and changing realities are rather more contested. This volume addresses many dimensions of the response to issues of race and ethnicity in social work practice in Europe. It extends the debates on inter-cultural and race equality practice in social work through a stimulating and innovative collection of contributions. This book was originally published as a special issue of the *European Journal of Social Work*.
