Personality in Business .. Routledge
This book is a critical analysis of telematics industries in the Philippines, Caribbean, sub-Saharan Africa, Mexico, Malaysia, Brazil, India and Singapore. The study contrasts with most previous studies of the 'information society' - which focus on the US, Japan and the EEC. Noted scholars make contributions that fill a gap in the literature on communications policy and communications development, in particular national and international political-economic and policy aspects. Topics such as satellites, television, computer systems and links with international communications are discussed as well as specific policy issues which have arisen in opposition to the First World's continuing media and data monopolies.

Only 43 per cent of U.S. construction firms remain in business after four years. Why? Inadequate management, according to the U.S. Small Business Administration. This is surprising because most construction firms are formed by ambitious construction project managers, executives and tradesmen who have excelled at what they have been doing. But as experienced as these entrepreneurs may be, they are not likely prepared to take on the full range of

responsibilities forced on them in managing the business of construction in its entirety. While this business failure rate and its causes are based on U.S. experience, available data from a number of other industrialized countries shows they are similar. This book describes in detail what the business side of the construction equation requires of the construction firm owner. The contractor who quickly learns these requirements can identify and avoid or manage around the pitfalls that cause the high failure rate in our industry and put his or her construction firm on a level playing field with the best-run companies in the business. The detailed duties of the owner, whether in the U.S., U.K., Australia or Canada, are a common theme throughout the book. The author, Nick Ganaway, speaks peer-to-peer, and the book is sprinkled with supporting examples from his own experience. He is immersed in the industry and this book is "based on the things I've learned, used, and refined as a light-commercial general contractor in the course of starting and operating my own construction firm for 25 years." The contractor doing \$5 million or \$50 million or more in annual sales or the equivalent amount in other countries, or the entrepreneur who is just starting up, can use the tried and proven material in this book to build a business that is profitable, enjoyable, and enduring. Additionally, the book

devotes a chapter to specializing in chain-store construction.

This new major work shines a spotlight on key criminological themes in the study of transnationalism and globalization, and, through a selection of the established literature on the subject along with more contemporary writing, explores how globalization is defined, researched and debated within criminology. In order to do this, the set is broken down into three volumes: Volume One: Concept, History, Method Volume Two: Transnational Crime, Deviance and Crime Policy Volume Three: New Directions in Criminology and Criminal Justice The three-volume structure enables comprehensive coverage of the historic development of the concept, its key definitional and methodological issues, ample case studies as well as theoretical and normative academic debates. Each volume is framed by its own newly-written introduction which places the selection of articles in context, making this set a truly valuable resource for scholars in the field.

ACDC Principles and Applications teaches learners how to apply basic laws and analysis techniques to traditional introductory circuits, as well as popular, real-world AC and DC circuits. AC/DC Principles combines standard theory of electricity with fundamentals of electronics and demonstrates electronic theory as applied to actual applications. Throughout the book, only those circuit theorems and analysis techniques that are practical and typically used in real-world circuit analysis are addressed. In addition, Kirchhoff's current law, Kirchhoff's voltage law, Thevenin's Theorem and Ohm's law are introduced to ensure that the learner has a complete understanding of each law before attempting to apply all or part to traditional series and parallel circuits.

Bourgault (mass communication, Northern Michigan U.-Marquette) analyzes the historical, political, economic, social, cultural, and stylistic factors that have shaped media products in African radio, television, and newspapers. She investigates the three major influences of the precolonial legacy of the oral tradition, the presence of an alienated managerial class, and the domination of African nations by systems based on patronage, and looks at recent developments in technology and the move toward privatization.
