This book by Lionel Robbins first appeared in 1932 as an outstanding English-language statement of the Misesian view of economic method, namely that economics is a social science and must advance its propositions by means of deductive reasoning and not through the methods used in the natural sciences. The case is argued here with patience and attention to scholarly details. The unfortunate second edition of this book, which is more available today, introduces confusions by departing from Austrian microeconomic theory. Thus does the Mises Institute celebrate the 75th anniversary of the first edition with this reprint. "Reading Robbins," writes Samuel Bostaph of the University of Dallas, "is an excellent way of contrasting his explanation of the basic nature of economics with that of the Austrian School, as found in the work of Mises as an extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one ’ s understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "

The 2021 World Trade Report analyses how digital technologies are transforming global commerce and international trade cooperation. It examines in particular how trade is likely to evolve in the coming 10 to 15 years as a result of digital technologies, such as 3D printing, artificial intelligence and blockchain. Case studies will provide concrete examples of how companies are already using new technologies to streamline their operations. The report will also include contributions from academics and leading experts on how they see digital technologies having an impact on the future of trade and the nature of trade cooperation.

Vladimir Ilich Lenin's Imperialism: The Highest Stage of Capitalism, originally published in 1916, was one of the first attempts to account for the increasing importance of the world market in the twentieth century. The essay is a synthesis of Lenin's modifications and developments of economic theories that Karl Marx formulated in 'Das Kapital'. This remarkable Marxist text explains fully the inescapable flaws and destructive power of Capitalism. Lenin offers a predictive scenario of a world shaken by competitive instability, warfare and crisis, dominated by monopolies, the merging of finance and industrial capital, and fierce territorial competition. Its pertinence is now greater than ever. Lenin vaticinated that those third world countries used merely as capitalist labour would have no choice but to join the Communist revolution in Russia. His theoretical framework remains the best method for understanding recent global developments.

Design, Deployment and Operation of a Hydrogen Supply Chain introduces current energy system and the challenges that may hinder the large-scale adoption of hydrogen as an energy carrier. It covers the different aspects of a methodological framework for designing a HSC, including production, storage, transportation and infrastructure. Each technology's advantages and drawbacks are evaluated, including their technology readiness level (TRL). The multiple applications of hydrogen for energy are presented, including use in fuel cells, combustion engines, as an alternative to natural gas and power to gas. Through analysis and forecasting, the authors explore deployment scenarios, considering the dynamic aspect of HSCs. In addition, the book proposes methods and tools that can be selected for a multi-criteria optimal design, including performance drivers and economic, environmental and societal metrics. Due to its systems-based approach, this book is ideal for engineering professionals, researchers and graduate students in the field of energy systems, energy supply and management, process systems and even policymakers. Explores the key drivers of hydrogen supply chain design and performance evaluation, including production and storage facilities, transportation, information, sourcing, pricing and sustainability Presents multi-criteria tools for the optimization of hydrogen supply chains and their integration in the overall energy system Examines the available technology, their strengths and weaknesses, and their technology readiness levels (TRL), to draw future perspectives of hydrogen markets and propose deployment scenarios Includes international case studies of hydrogen supply chains at various scales

Supermarket business is now a popular business in most of the countries of the world. Every year there are lots of new supermarkets starting their business in the different parts of the universe. But managing the business in this changing economic environment is always difficult for the owners and top management. So they need to develop and implement effective management practice to operate the business smoothly. The book explains the connection between economic environment and the supermarket's management practices. For this reason, the author has been conducted a research on the two popular supermarkets of UK namely Tesco and ASDA. These two shops are the most popular supermarkets in the UK and operating their business in the different parts of the world as well. The management system of these two supermarket chain corporations and effect of economic environment in these two business organizations are nicely discussed in this book. The book presents how the companies are effectively sustain their management practices in this changing economic environment. The author also tries to analyze the economic condition of these two supermarket chain corporations and tries to use the theoretical concepts of economics and business in the practical sense. Thus, most of the major concepts and theories are discussed in this book based on the real life scenario. Some basic concepts and theories are discussed in the first part. It will clear the idea of the readers to understand the practical implementation of the concepts and theories.

Hydrogen Economy: Supply Chain, Life Cycle Analysis and Energy Transition for Sustainability explores the challenges for the transition into a sustainable hydrogen economy. In this book, experts from various academic backgrounds discuss the tools and methodologies for the analysis, planning, design and optimization of hydrogen supply chains. They examine the available technologies for hydrogen production, storage, transport, distribution and energy conversion, providing a cross cutting perspective on their sustainability. Environmental, social and economic aspects are considered, allowing for a more complete life cycle assessment of the entire supply chain. Methods and frameworks for multi-criteria decision making for the sustainable implementation of hydrogen systems are also covered. Providing a broad overview of the subject and well-recognized tools to manage hydrogen sustainability, this book is a useful resource for engineering researchers and PhD students in energy, environmental and industrial areas, energy economy researchers, practicing hydrogen energy engineers and technicians, energy and environmental consultants, life cycle assessment practitioners and consultants. Provides a broad perspective of the issues related to environmental, social and economic sustainability of hydrogen energy and its future perspectives Presents the current applied research and available tools for managing and assessing hydrogen energy sustainability, such as LCA, optimization, multi-criteria decision making and supply chain optimization Explores how experts in the field handle all issues related to the application of life cycle assessment for hydrogen production, storage, transport, distribution and end use
