A classic text about the social study of food, this is the first English language edition of Jean-Pierre Poulain's seminal work. Tracing the history of food scholarship, *The Sociology of Food* provides an overview of sociological theory and its relevance to the field of food. Divided into two parts, Poulain begins by exploring the continuities and changes in the modern diet. From the

effect of globalization on food production and supply, to evolving cultural responses to food – including cooking and eating practices, the management of consumer anxieties, and concerns over obesity and the medicalization of food – the first part examines how changing food practices have shaped and are shaped by wider social trends. The second part provides an overview of the emergence of food as an academic focus for sociologists and anthropologists. Revealing the obstacles that lay in the way of this new field of study, Poulain shows how the discipline was first established and explains its development over the last forty years. Destined to become a key text for students and scholars, *The Sociology of Food* makes a major

contribution to food studies and sociology. This edition features a brand new chapter focusing on the development of food studies in the English-speaking world and a preface, specifically written for the edition.

South Asia has grown rapidly with significant reductions in poverty, but it has not been able to match the fast-growing working age population, leading to lingering concerns about jobless growth and poor job quality. Could export growth in South Asia result in better labor market outcomes? The answer is yes, according to our study, which rigorously estimates—using a new methodology—the potential impact from higher South Asian exports per worker on wages and employment over a 10-year period. Our study shows the

---

positive side of trade. It finds that increasing exports per worker would result in higher wages—mainly for better-off groups, like more educated workers, males, and more-experienced workers—although less-skilled workers would see the largest reduction in informality. How can the benefits be spread more widely? Our study suggests that scaling up exports in labor-intensive industries could significantly lower informality for groups like rural and less-educated workers in the region. Also, increasing skills, and participation of women and young workers in the labor force could make an even bigger dent in informal employment. The region could achieve these gains by: (i) boosting and

connecting exports to people (e.g., removing trade barriers and investment in infrastructure); (ii) eliminating distortions in production (e.g., by more efficient allocation of inputs); and (iii) protecting workers (e.g., by investing in education and skills).

leading practitioners in the field, working in such diverse areas as phosphines, hydrogen complexes, transition metal complexes and nitrogen fixation, have been influenced by Chatt. The reader is then brought right up-to-date with the inclusion of some of the latest research on these topics, all of which serves to underline Chatt's continuing legacy. Intended as a permanent record of Chatt's life, work and influence, this book will be of interest to lecturers, graduate students, researchers and science historians.

Defined as, “ The science about the development of an embryo from the

fertilization of the ovum to the fetus stage,” embryology has been a mainstay at universities throughout the world for many years. Throughout the last century, embryology became overshadowed by experimental-based genetics and cell biology, transforming the field into developmental biology, which replaced embryology in Biology departments in many universities. Major contributions in this young century in the fields of molecular biology, biochemistry and genomics were integrated with both embryology and developmental biology to provide an understanding of the molecular portrait of a “ development cell. ” That new integrated approach is known as stem-cell biology; it is an

---

understanding of the embryology and development together at the molecular level using engineering, imaging and cell culture principles, and it is at the heart of this seminal book. *Stem Cells and Regenerative Medicine: From Molecular Embryology to Tissue Engineering* is completely devoted to the basic developmental, cellular and molecular biological aspects of stem cells as well as their clinical applications in tissue engineering and regenerative medicine. It focuses on the basic biology of embryonic and cancer cells plus their key involvement in self-renewal, muscle repair, epigenetic processes, and therapeutic applications. In addition, it covers other key relevant topics such as nuclear

reprogramming induced pluripotency and stem cell culture techniques using novel biomaterials. A thorough introduction to stem-cell biology, this reference is aimed at graduate students, post-docs, and professors as well as executives and scientists in biotech and pharmaceutical companies. This book focuses on the transcriptional and post-transcriptional gene regulations and presents a detailed portrait of many novel aspects related to highlighting the importance

of key TFs in some vital biological processes, the role of certain TFs to control some infectious diseases, the role of non-coding RNAs in controlling mRNA expression, the involvement of these non-coding RNAs in diseases, and the interplay between TFs and microRNAs as key players for gene expression regulation giving a complete picture of how genes are regulated at the cellular level. The editor embarked upon this writing project entitled "Transcriptional and Post-transcriptional Regulation" to make pertinent contributions accessible to the scientific community. Combining Paid Work and Family Care

## BoD – Books on Demand

As populations age around the world, increasing efforts are required from both families and governments to secure care and support for older and disabled people. At the same time both women and men are expected to increase and lengthen their participation in paid work, which makes combining caring and working a burning issue for social and employment policy and economic sustainability. International discussion about the reconciliation of work and care has previously focused mostly on childcare. Combining paid work and family care widens the debate, bringing into discussion the experiences of those providing support to their partners, older relatives and disabled or seriously ill children. The book analyses the situations of these working carers in Nordic, liberal

and East Asian welfare systems.

Highlighting what can be learned from individual experiences, the book analyses the changing welfare and labour market policies which shape the lives of working carers in Finland, Sweden, Australia, England, Japan and Taiwan.

At the core of this book lies the question how to approach medicines, risks and communication as a researcher - or anybody planning and evaluating a communication intervention, or wanting to understand communication events in private and the media. With a view to tackle current shortcomings of communication systems and processes for improved implementation, patient satisfaction and health outcomes, a multilayered approach is presented. This

---

combines multiple data types and methods to obtain a wider and deeper understanding of the major parties and their interactions, as well as the healthcare, social and political contexts of information flows, how they interfere and which impact they have. Illustrated with real life experiences of safety concerns with medicines, worldwide active experts discuss the methods and contributions their disciplines can offer. With considerations on terminologies, tabulated overviews on communication types and outcomes, a patient-centred vision and plain language for non-medical readers, the book creates a platform for multidisciplinary collaborations amongst researchers as well as practitioners from communications, healthcare, the social sciences and pharmacovigilance. Importantly, it advocates for an active role of patients and highlights the achievements and aspirations of patient organisations. Finally, the book suggests establishing an inclusive discipline of humanities and epidemiology of medicinal product risk communication to realise full research potential. The authors are driven by the curiosity for communication as the most human behaviour, and as good health is amongst the basic human needs, medicinal product risk communication is an exciting research field of high global relevance.

From 1 October 2013, RIDDOR 2013 comes into force, which introduces significant changes to the existing reporting requirements. The main changes are to simplify the reporting requirements in the following areas: the classification of major injuries to workers is being replaced with a shorter list of 'specified injuries'; the previous list of 47 types of industrial disease is being replaced with eight categories of reportable work-related illness; fewer types of dangerous occurrence require reporting. This

leaflet aims to help employers and others with reporting duties under RIDDOR, to comply with RIDDOR and to understand reporting requirements.
