Manual handling is a major cause of injury and ill health in the workplace. To implement the European Directive on the manual handling of loads (90/269/EEC), the Manual Handling Operations Regulations 1992 (MHOR) were introduced from 1 January 1993. A first evaluation study of the impact of the Regulations in 1996 found employers had accepted the need to control risks associated with manual handling and they found the ergonomic approach adopted by the Regulations to be an appropriate means of doing this.

Mirroring a worldwide phenomenon in industrialized nations, the U.S. is experiencing a change in its demographic structure known as population aging. Concern about the aging population tends to focus on the adequacy of Medicare and Social Security, retirement of older Americans, and the need to identify policies, programs, and strategies that address the health and safety needs of older workers. Older workers differ from their younger counterparts in a variety of physical, psychological, and social factors. Evaluating the extent, causes, and effects of these factors and improving the research and data systems necessary to address the health and safety needs of older workers may significantly impact both their ability to remain in

the workforce and their well being in retirement. Health and Safety Needs of Older Workers provides an image of what is currently known about the health and safety needs of older workers and the research needed to encourage social policies that guarantee older workers a meaningful share of the nation's work opportunities.

Health and Safety at Work For Dummies

An informal analysis of Health and Safety Executive (HSE) national injury statistics appeared to indicate that some foods sector industries which handled heavy loads (eg. brewing/malting) had a higher manual handling injury rate than others (eg. dairies and soft drinks). System Concepts was commissioned by HSE in May 2001 to try to verify this finding and to try to determine a statistical association between loads lifted (eg. light and heavy sacks) and manual handling injury/absence from injury, based on data from a number of food/drink company sites. It was envisaged that any information arising from such a project could be used to help encourage food and drinks companies to reduce the weight of the heavier loads used in the sector.
