Master's Thesis from the year 2011 in the subject Tourism - Miscellaneous, grade: 9,7 (of 10) - distinction, Bournemouth University (School of Tourism), course: European Tourism Management, language: English, abstract: In recent years, smartphone applications have appeared as a new tool helping travellers create experiences. Taking into consideration the potential impact of the smartphones and mobile applications, it is important to analyse the usage of smartphone applications in tourism. This dissertation analyses the already existing mobile

applications on the tourism market, clarifies which type of consumers uses these applications during their travel process and predicts some future trends for these new mobile services. There are several different user groups who use smartphones in a variety of different ways, from business users to media junkies. The literature review shows that the main customers are young men, who use these applications especially to plan their travel during the information phase. But smartphone applications can not only support tourists' information processing activities such as connection and navigation in the tourism consumption stage, but also the activities in the pre-consumption and post-consumption stages. A survey in Madrid (Spain) and Nuremberg (Germany) was conducted for this dissertation showing the main differences and similarities in using smartphone applications for tourism activities. The usage of smartphones in Germany is still more frequent than in Spain and the main used device is the iPhone from Apple. Furthermore, German as well as Spanish travellers focus their usage mainly on the information stage than on the booking process, as the majority of mobile applications are purely informative such as maps or tourist travel guides. The usage is also still challenged by expensive roaming charges and poor Internet connectivity. For a successful usage tourism companies should therefore focus on aspects like secure and e XDA Developers' Android Hacker's Toolkit "O'Reilly Media, Inc." Normal 0 false false false

Books like this contain what may be called the raw material of the art, the processes which the magician can employ at will in building up his larger experiments in magic, each of which should be a complete play in itself. Then, when the student has found out how tricks can be done, he would do well to turn his attention to Our Magic, by Mr. Maskelyne and his associate, Mr. David Devant. And from this logical treatise he can learn how experiments in magic ought to be

composed. It is from this admirable discussion of the basic principles of modern magic that more than one of the points made in this paper have been borrowed. Mr. Devant calls attention to the fact that new tricks are common, new manipulative devices, new examples of dexterity and new applications of science, whereas new plots, new ideas for effective presentation, are rare. He describes a series of experiments of his own, some of which utilize again but in a novel manner devices long familiar, while others are new both in idea and in many of the subsidiary methods of execution. One of the most hackneyed and yet one of the most effective illusions in the repertory of the conjurer is that known as the Rising Cards. The performer brings forward a pack of cards, several of which are drawn by members of the audience and returned to the pack, whereupon at the command of the magician they rise out of the pack one after the other in the order in which they were drawn. In the oldest form in which this illusion is described in the books on the art, the pack is placed in

a case supported by a rod standing on a base, and the secret of the trick lies on this rod and its base. The rod is really a hollow tube and the base is really an empty box. The tube is filled with sand, on the top of which rests a leaden weight, to which is attached a thread so arranged over and under certain cards as to cause the chosen cards to rise when it descends down the tube; and in putting the cards into the case the conjurer released a valve at the bottom of the tube, so that the sand might escape into the box, whereby the weight was lowered, the thread then doing its allotted work, and the cards ascending into view, no matter how far distant the performer might then be standing. It seems likely that the invention of this primitive apparatus may have been due to the fact that some eighteenth century conjurer happened to observe the sand running out of an hour-glass and set about to find some means whereby this escape of sand could be utilized in his art. The hollow rod, the escaping sand, and the descending weight have long since been discarded; but the illusion of the Rising Cards survives

and is now performed in an unending variety of ways. The pack may be held in the hand of the performer, without the use of any case, or it may be placed in a glass goblet, or it may be tied together with a ribbon and thus suspended from cords that swing to and from almost over the heads of the spectators; and however they may be isolated the chosen cards rise obediently when they are bidden. The original effect subsists, even though the devices differ....

This publication identifies the role of digital infrastructure in achieving the Sustainable Development Goals (SDGs)--including education, employment, agricultural sustainability,

food security, and spatial inequality--in 12 countries in Latin America and the Caribbean. It identifies a gap between the outcomes achieved for each SDG in the countries studied and those achieved in OECD countries. Moreover, the region still has a long way to go to achieve the SDG targets set in the 2030 Agenda for Sustainable Development. The authors explain how investment in digital infrastructure can help close the gaps between the region and these two benchmarks (OECD countries and SDG targets). They also quantify the investment in telecom in the region between 2008 and 2017 and estimate what amount is still needed to help close these gaps.

Kingdom of Nokia tells a fascinating story of corporatism in Finland. How did the mobile phone giant Nokia make the Finnish elite willing to serve the interests of the company? Nokia became a global player in mobile communications in the 1990s, and helped establish Anglo-Saxon capitalism in Finland. Through its success and strong lobbying, the company managed to capture the attention of Finnish politicians, civil servants, and journalists nationwide. With concrete detailed examples, Kingdom of Nokia illustrates how Nokia organised lavishing trips to journalists and paid direct campaign

funding to politicians to establish its role at the core of Finnish decision-making. As a result, the company influenced important political decisions such as joining the European Union and adopting the euro, and further, Nokia even drafted its own law to serve its special interests. All this in a country considered one of the least corrupt in the world.

A practical guide to Dr. John Dee's angelic magic • Contains instructions for performing Enochian magic meditations • Examines John Dee's original diaries from the British Library Enochian magic is a powerful, ancient system for opening portals to heavenly realms and enabling the ascent to God. The basis for many of the modern systems of magic, including the Golden Dawn, Enochian magic is named after the biblical prophet Enoch, who received the same knowledge and wisdom that was later conveyed to the astrologer to the

court of Queen Elizabeth I, Dr. John Dee, by angels in the 16th century. In *The Lost Art of Enochian Magic* John DeSalvo traces the history of magic--from the earliest civilizations of the Akadians and Egyptians through the Greco-Roman period and up to the present time--to reveal how magic has penetrated and influenced our religious beliefs and practices today. Through his unprecedented investigation into the angelic magic of Dr. John Dee, during which time he deciphered Dee's original phonetic notations in the margins of Dee's 16th-century diaries, DeSalvo learned to properly reproduce the "Enochian calls," which act like mantras in opening higher realms and invoking angels, key to this type of magical practice. DeSalvo shows how to use Enochian magic for personal spiritual development and also as protection from negative energies.
