A New York Review Books Original Hav is like no place on earth. Rumored to be the site of Troy, captured during the crusades and recaptured by Saladin, visited by Tolstoy, Hitler, Grace Kelly, and Princess Diana, this Mediterranean city-state is home to several architectural marvels and an annual rooftop race that is a feat of athleticism and insanity. As Jan Morris guides us through the corridors and quarters of Hav, we hear the mingling of Italian, Russian, and Arabic in its markets, delight in its famous snow raspberries, and meet the denizens of its casinos and cafés. When Morris published *Last Letters from Hav* in 1985, it was short-listed for the Booker Prize. Here it is joined by *Hav of the Myrmidons*, a sequel that brings the story up-to-date. Twenty-first-century Hav is nearly unrecognizable. Sanitized and monetized, it is ruled by a group of fanatics who have rewritten its history to reflect their own blinkered view of the past. Morris's only novel is dazzlingly sui-generis, part erudite travel memoir, part speculative fiction, part cautionary political tale. It transports the reader to an extraordinary place that never was, but could well be.

From the author of the New York Times bestseller *Letters of Note* comes a collection of 75 of history's most interesting, profound, and sometimes unknown speeches from a range of scintillating personalities such as Frederick Douglass, Justin Trudeau, Albert Einstein, Meghan Markle, Barbara Jordan, and Ursula K. Le Guin. This thoughtfully curated and richly illustrated collection celebrates oratory old and new, highlighting speeches we know and admire, while also shining a light on profound drafts that were never delivered or have until now been forgotten. From George Bernard Shaw's warm and rousing toast to Albert Einstein in 1930 and the commencement address affectionately given to graduates at Long Island University by Kermit the Frog, to the chilling public announcement (that was thankfully never made) by President Richard Nixon should Neil Armstrong and Buzz Aldrin become stranded on the moon, *Speeches of Note* honors the words and ideas of some of history's most provocative and inspiring personages.

The Law on Obligations and Contracts Walker Large Print

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Brian and his friends are not part of the cool crowd. They're the misfits and the troublemakers—the ones who jump their high school's fence to skip class regularly. So when a deadly virus breaks out, they're the only ones with a chance of surviving. The virus turns Brian's classmates and teachers into bloodthirsty attackers who don't die easily. The whole school goes on lockdown, but Brian and his best friend, Chad, are safe (and stuck) in the theater department—far from Brian's sister, Kenzie, and his ex-girlfriend with a panic attack problem, Laura. Brian and Chad, along with some of the theater kids Brian had never given the time of day before, decide to find the girls and bring them to the safety of the theater. But it won't be easy, and it will test everything they thought they knew about themselves and their classmates. Books like this contain what may be called the raw material of the art, the processes which the magician can employ at will in building up his larger experiments in magic, each of which should be a complete play in itself. Then, when the student has found out how tricks can be done, he would do well to turn his attention to *Our Magic*, by Mr. Maskelyne and his associate, Mr. David Devant. And from this logical treatise he can learn how experiments in magic ought to be composed. It is from this admirable discussion of the basic principles of modern magic that more than one of the points made in this paper have been borrowed.

Mr. Devant calls attention to the fact that new tricks are common, new manipulative devices, new examples of dexterity and new applications of science, whereas new plots, new ideas for effective presentation, are rare. He describes a series of experiments of his own, some of which utilize again but in a novel manner devices long familiar, while others are new both in idea and in many of the subsidiary methods of execution. One of the most hackneyed and yet one of the most effective illusions in the repertory of the conjurer is that known as the Rising Cards. The performer brings forward a pack of cards, several of which are drawn by members of the audience and returned to the pack, whereupon at the command of the magician they rise out of the pack one after the other in the order in which they were drawn. In the oldest form in which this illusion is described in the books on the art, the pack is placed in a case supported by a rod standing on a base, and the secret of the trick lies on this rod and its base. The rod is really a hollow tube and the base is really an empty box. The tube is filled with sand, on the top of which rests a leaden weight, to which is attached a thread so arranged over and under certain cards as to cause the chosen cards to rise when it descends down the tube; and in putting the cards into the case the conjurer released a valve at the bottom of the tube, so that the sand might escape into the box, whereby the weight was lowered, the thread then doing its allotted work, and the cards ascending into view, no matter how far distant the performer might then be standing. It seems likely that the invention of this primitive apparatus may have been due to the fact that some eighteenth century conjurer happened to observe the sand running out of an hour-glass and set about to find some means whereby this escape of sand could be utilized in his art. The hollow rod, the escaping sand, and the descending weight have long since been discarded; but the illusion of the Rising Cards survives and is now performed in an unending variety of ways. The pack may be held in the hand of the performer, without the use of any case, or it may be placed in a glass goblet, or it may be tied together with a ribbon and thus suspended from cords that swing to and from almost over the heads of the spectators; and however they may be isolated the chosen cards rise obediently when they are bidden. The original effect subsists, even though the devices differ.... *The Bookman: A Review of Books and Life*, Volume 40
