In 2007, Apple released the iPhone. With this release came tools as revolutionary as the internet was to businesses and individuals back in the mid- and late-nineties: Apps. Much like websites drove (and still drive) business, so too do apps drive sales, efficiencies and communication between people. But also like web design and development, in its early years and iterations, guidelines and best practices for apps are few and far between. Designing Apps for Success provides web/app designers and developers with consistent app design practices that result in timely, appropriate, and efficiently capable apps. This book covers application lifecycle management that designers and developers use when creating apps for themselves or the entities that hired them. From the early discussions with a company as to how to what kind of app they want, to storyboarding, to developing cross platform, to troubleshooting, to publishing, Designing Apps for Success gives a taut, concise, and pragmatic roadmap from the beginning of the process all the way to the end. Developers and designers will learn not only best practices on how to design an app but how to streamline the process while not losing any quality on the end result. Other topics in this book include: Case studies that best showcase the development process at work (or not at work). Global examples of apps developed all over the world. Future proofing your apps Post-publishing: Promoting and marketing your apps and keeping it relevant. Consistent app design practices for consistently successful results.

How can great companies do everything right - identify real customer needs, deliver excellent innovations, beat their competitors to market - and still fail? The sad truth is that many companies fail because they focus too intensely on their own innovations, and then neglect the innovation ecosystems on which their success depends. In our increasingly interdependent world, winning requires more than just delivering on your own promises. It means ensuring that a host of partners -some visible, some hidden- deliver on their promises, too. In The Wide Lens, innovation expert Ron Adner draws on over a decade of research and field testing to take you on far ranging journeys from Kenya to California, from transport to telecommunications, to reveal the hidden structure of success in a world of interdependence. A riveting study that offers a new perspective on triumphs like Amazon's e-book strategy and Apple's path to market dominance; monumental failures like Michelin with run-flat tires and Pfizer with inhalable insulin; and still unresolved issues like electric cars and electronic health records, The Wide Lens offers a powerful new set of frameworks and tools that will multiply your odds of innovation success. The Wide Lens will change the way you see, the way you think - and the way you win.

The First International ICST Conference on Communications Infrastructure, Systems and Applications in Europe (EuropeComm 2009) was held August 11–13, 2009, in London. EuropeComm 2009 brought together decision makers from the EU commission, top researchers and industry executives to discuss the directions of communications research and development in Europe. The event also attracted academia and industry representatives, as well as government officials to discuss the current developments and future trends in technology, applications and services in the communications field. Organizing this conference was motivated by the fact that the development and deployment of future services will require a common global-scale infrastructure, and therefore it is important that designers and stakeholders from all the systems stacks come together to discuss these developments. Rapidly decreasing costs of computational power, storage capacity, and communication bandwidth have led to the development of a multitude of applications carrying an increasingly huge amount of traffic on the global networking infrastructure. What we have seen is an evolution: an infrastructure looking for networked applications has evolved into an infrastructure struggling to meet the social, technological and business challenges posed by the plethora of bandwidth-hungry emerging applications.
