Physiology is the study of how all the different organs, muscles, bones, and every other part of the human anatomy work together to sustain life and health. These are wide ranging and deep subjects, and there's no way a test with only 30 questions can come close to covering everything you'll need to know, but you'll still need to prep and review for this exam thoroughly.

Whereas anatomy is about structure, physiology is about function. Human physiology is the scientific study of the chemistry and physics of the structures of the body and the ways in which they work together to support the functions of life. Much of the study of physiology centers on the body's tendency toward homeostasis.
