This unique book delves into the mysteries of human fetal growth and maturation. Growing knowledge in genetics indicates that factors that impact on/influence fetal growth and maturation may have a role in determining a person's health and disease in later years. Placental, maternal, environmental, nutrient as well as fetal genome factors each play a role in producing a healthy, unhealthy or abnormal baby. A study of fetal growth and maturation is therefore basic to the understanding of why fetal growth problems occur, what implications these can have for adult disease, and how clinical intervention can help to reverse growth problems. The present study will be comprehensive and will be a major contribution to the fields of gynecology, genetics, obstetrics, biochemistry, molecular biology and clinical medicine. It will include cutting edge research in the field as well as explorations on clinical interventions in fetal growth, which will not only add to existing knowledge but also prompt future research. The two Editors are distinguished in their fields and both have extensive clinical and research experience. They felt that they could use their expertise to create a book that will help students, practitioners, researchers and others to understand the subject of gestation, growth and maturation and its implications from a multi-dimensional point of view, which will help them develop their own expertise in a cutting-edge and developing field. They have brought together her medical scientists, clinical practitioners, embryologists, endocrinologists, immunologists, gynecologists, obstetricians, reproductive and molecular biologists, geneticists and many others to create a state-of-the-art book on a subject with increasing demand for further knowledge. It aims to integrate different disciplines to give a holistic view of human fetal growth maturation.

This volume describes culture media and solutions used in human ART; how they have been developed for in vitro human pre-implantation embryo development, the function and importance of the various components in media and solutions and how they interact, and how the systems in which these are used can influence outcomes. Chapters discuss inorganic solutes, energy substrates, amino acids, macromolecules, cytokines, growth factors, buffers, pH, osmolality, and the interaction of these parameters. The role of incubators and other physical factors are reviewed, along with the relevance and prospects of emerging technologies: morphokinetic analysis using time-lapse imaging and dynamic fluid incubation systems. Results of prospective randomized trials are emphasized to ascertain the added value of these techniques for selecting viable embryos. This comprehensive guide will be invaluable for embryologists, physicians and all personnel involved in the fluid products used in human ART seeking to optimize their successful use of these components.

Transsphenoidal Surgery, by Drs. Laws and Lanzino, captures all of today's clinical knowledge on the multidisciplinary management of pituitary tumors, with a focus on surgical techniques. Acclaimed international experts bring you detailed guidance on natural history, radiologic and clinical aspects, surgical indications, and resection techniques. What's more, case presentations and clinical photographs help you reduce the risk of error and advance your own surgical skills. At expertconsult.com, you'll have online access to the full text plus streaming videos of key procedures to help you provide the best possible outcomes for every patient. Access the fully searchable text online at expertconsult.com and view hours of videos in which experts demonstrate how to perform key procedures. Refine your skills through discussions of intraoperative imaging, new techniques in transsphenoidal surgery, new microsurgical procedures, radiosurgical techniques, and more. Get balanced and comprehensive perspectives on pituitary surgery from well-recognized international, multidisciplinary contributors. Make better-informed decisions with case presentations, drawn from Dr. Laws's 40 plus years as a leader in pituitary surgery, that include a summary of the clinical history, preoperative radiographs, and postoperative clinical information and radiographs. Tap into exceptional visual guidance and reduce the risk of error through abundant clinical photographs, line drawings, and procedural videos. Find the information you need quickly via a consistent chapter-to-chapter organization. Reduce the risk of error by watching the experts

The first edition of Color Atlas of Fetal and Neonatal Histology was an important step in updating the histology texts available to practicing pathologists and pathology trainees who perform fetal autopsy and/or participate in research involving fetal tissues. It was a well-received volume that filled a major gap in pathology references related to normal histology and provided a comprehensive, state-of-the-art review of fetal and neonatal histology. While the basics of fetal histology have changed little in the intervening years since publication of the first edition, this successor edition provides new insights and a fresh perspective. This book contains six new chapters including: blood vessels and lymphatics, external genitalia, eye, ear, skin, and maceration changes. Many existing chapters have also been expanded to address a greater breadth of fetal and neonatal histology such as postnatal testis development and the cardiac conduction system. The "Special Considerations" sections were also expanded in many chapters to address particularly problematic issues within individual organ systems. The book reviews the histology of the major organ systems in the fetus and neonate and provides detailed images, up-to-date references, and practical guidelines for identifying tissues across all gestational ages of development. The second edition of Color Atlas of Fetal and Neonatal Histology serves as the ultimate go-to resource for pathologists and researchers dealing with, and interested in, fetal and neonatal histology. It provides a comprehensive summary of the current status of the field with excellent and extensive illustrative examples that help guide the clinical study of fetal and neonatal histology and stimulate investigative efforts with fetal tissue.

Fetal and Neonatal Pathology presents in one volume an account of the pathological findings encountered when examining fetuses from the second and third trimester of pregnancy as well as in neonatal death. It provides essential clinical and physiological information and discusses the pathogenesis of pathological findings as a guide to the formulation of the appropriate method of investigation. The book is divided into two parts. The first deals with examination of the products of conception after termination of pregnancy for fetal anomaly. The range of pathological abnormality is described and its relevance discussed. Attention is drawn to the differences in pathological findings in specific conditions between the second and third trimester. The second part of the book is system orientated and describes and illustrates those pathological problems which are likely to be encountered in the fetus and neonate. Each chapter is introduced by a concise account of the development of that system. Where relevant there is also discussion of changes at birth as well as changes in normal function that may occur during the neonatal period. Fetal and Neonatal Pathology is primarily written for the morbid anatomist and histopathologist. It also provides a valuable source of reference for obstetricians, neonatologists and paediatricians. Its value as a working tool of reference is enhanced by effective cross-referencing between sections by both chapter and page number. 1 [National Library of Medicine Current Catalog](#) Bantam

Introduction: In pregnancies of obese women, increased expression of nutrient transport proteins in the placenta via unknown mechanisms may be leading to fetal overgrowth. Objective and Hypotheses: The purpose of this research was to determine the effect of obesity, a high-fat diet, and adiponectin infusion on placental mTOR, STAT3, and AMP-K signaling and fetal growth. The following hypotheses were tested: (1) Placental mTOR and STAT3 signaling pathways are activated and AMP-K signaling is depressed in response to obesity and consumption of a high fat diet, thereby up-regulating placental nutrient transporters; (2) Adiponectin infusion activates placental AMP-K and inhibits mTOR signaling pathways and decreases fetal growth. Subjects and Animals Human: placental samples from obese (N=6) and lean (N=9) women who delivered at term, previously collected from a Swedish population and an American population, were used for analysis. Mice (C57/BL6) obtained from Jackson laboratory, were kept on standard lab chow or one of four diets (control, high-fat, high-sugar, high-fat/high-sugar) for 8 weeks prior to mating and throughout pregnancy, and studied close to term. Methods: The activity of three key signaling pathways was determined by measuring expression of phosphorylated S6K (an indicator of mTOR activity), AMP-K, and STAT3 using western blot in placental homogenates of human and murine samples. Serum levels of adiponectin and leptin were measured in mouse maternal samples. Fetal growth at embryonic day 18.5 was recorded for all mouse samples. Results: In the Swedish cohort, a significant decrease in phosphorylated AMP-K expression (-30%, p

This sixth edition provides an overview of fetal and neonatal pathology through a system-based approach. This book contains new chapters on immunology, with a continued focus on molecular aspects of pathology in the perinatal setting. The general principles of perinatal pathology and their clinical situations are also discussed, along with specific pathological entities and their organ systems. Keeling's Fetal and Neonatal Pathology, sixth edition aims to help the reader treat common problems through anatomical pathology findings and is relevant to practicing and trainee pathologists, obstetricians, maternal and fetal medicine specialists, neonatologists, and pediatricians.

Fetal and Neonatal Physiology, edited by Drs. Polin, Fox, and Abman, focuses on physiologic developments of the fetus and newborn and their impact on the clinical practice of neonatology. A must for practice, this 4th edition brings you the latest information on genetic therapy, intrauterine infections, brain protection and neuroimaging, and much more. Gain a comprehensive, state-of-the-art understanding of normal and abnormal physiology, and its relationship to disease in the fetus and newborn premature infant, from Dr. Richard Polin and other acknowledged worldwide leaders in the field. Understand the implications of fetal and neonatal physiology through chapters devoted to clinical correlation. Apply the latest insights on genetic therapy, intrauterine infections, brain protection and neuroimaging, and much more. Effectively manage the consequences of intrauterine infections with three new chapters covering intrauterine infection and preterm birth, intrauterine infection and brain injury, and intrauterine infection and chronic lung disease.

This book provides an overview of fetal psychobiological research, focusing on brain and behavior, genetic and epigenetic factors affecting both short and long-term development, and technological breakthroughs in the field. These focal points intersect throughout the chapters, as in the challenges of evaluating the fetal central nervous system, the myriad impacts of maternal stressors and resiliencies, and the salience of animal studies. It also discusses specific monitoring and assessment methods, including cardiocography, biomagnetometry, 4D ultrasound, in utero MRI, and the KANET test. Spanning assessment, identification, and pre- and postnatal intervention, the book weighs the merits of standardized evaluations and argues for more integrative research in the future. Included in the coverage: Effects on the fetus of maternal anxiety, depression, and stress during pregnancy. Clinical and experimental research in human fetuses and animal models. Observational research including the use of behaviors in developing tests to assess fetal health. Fetal auditory processing and implications for language development. Fetal effects of prenatal exposure to selective SRI antidepressant exposure. Structural and functional imaging of the prenatal brain. The effects of alcohol exposure on fetal development. Fetal Development: Research on Brain and Behavior, Environmental Influences, and Emerging Technologies is an essential resource for researchers, clinicians and related professionals, as well as students in a wide range of fields such as developmental psychology, pediatric and obstetrical medicine, neuroscience, nursing, social work, and early childhood education. For the two-semester A&P laboratory course. Fully engage students in their A&P Lab experience Human Anatomy & Physiology Laboratory Manual: Making Connections distinguishes itself from other A&P lab manuals by focusing on and addressing the most common teaching challenges in the lab--getting students to engage in the lab, to prepare for the lab, and to apply concepts in the lab. Catharine Whiting's active learning approach incorporates a rich variety of hands-on activities and guided questions to get students engaged and asking questions. The 2nd Edition provides new features, such as "What You Need to Know Before You Start this Unit" at the beginning of each Unit and new Pre-Lab Video Coaching Activities to help students learn what they need to review before lab. Developed as the companion to Erin Amerman's Human Anatomy & Physiology, 2nd Edition, Whiting's lab manual reflects the same superb art program and terminology found in the Amerman textbook. Human Anatomy & Physiology Laboratory Manual: Making Connections, 2nd Edition is available in three versions for your students: Main, Cat and Fetal Pig. The Cat and Fetal Pig versions are identical to the Main version except that they include seven additional cat dissection and nine additional fetal pig dissection exercises, respectively, at the back of the lab manual. Also available with Mastering A&P Mastering(tm) is the teaching and learning platform that empowers you to reach every student. By combining trusted author content with digital tools developed to engage students and emulate the office-hour experience, Mastering personalizes learning and improves results for each student. Mastering A&P assignments support interactive features in the lab manual and include new Pre-Lab Video coaching activities, new Cat Dissection Video and Fetal Pig Dissection Video coaching activities, new fully mobile PAL 3.1 plus PAL 3.1 Customizable Flashcards, Learning Catalytics (tm) , A&P Flix 3D muscle animations, a variety of Art Labeling Questions, Clinical Application Questions, and more. Note: You are purchasing a standalone product; Mastering A&P does not come packaged with this content. Proper nutrition is the single most important component of preventative health care. Heart disease, diabetes, and other ailments are all linked to dietary habits. Accurate nutritional assessment can be a matter of life or death. Laboratory Tests for the Assessment of Nutritional Status explores the expanded number of nutrients that can now be evaluated. The author makes a compelling case for the practice and advancement of this critical health care tool. Nutritional assessment identifies undernutrition, overnutrition, specific nutrition deficiencies, and imbalances. Diligent assessment determines the appropriate nutrition intervention and monitors its effects. This book is a total revision of the 1974 version of the same title co-authored by Sauberlich. Since then, remarkable progress has been made on the methodologies applicable to nutrition status assessment and to the expanded number of nutrients that can be evaluated, especially trace elements. The introduction of high-performance liquid chromatography, amperometric detectors, and other technologies has advanced nutritional assessment by leaps and bounds. Today, nutritionists can gauge the value of microminerals, trace elements, and ultratrace elements. Sauberlich's revision updates the reader to the latest and most important trends in nutrition. These laboratory methods for the assessment of nutritional status are vital for identifying individuals as well as populations with nutritional risks.

New developments in reproductive technology have made headlines since the birth of the world's first in vitro fertilization baby in 1978. But is embryo experimentation ethically acceptable? What is the moral status of the early human embryo? And how should a democratic society deal with so controversial an issue, where conflicting views are based on differing religious and philosophical positions? These controversial questions are the subject of this book, which, as a current compendium of ideas and arguments on the subject, makes an original contribution of major importance to this debate. Peter Singer is the author of many books, including Practical Ethics (CUP, 1979), Marx (Hill & Wang, 1980), and Should the Baby Live? (co-authored with Helga Kuhse, Oxford U.P., 1986).

Biology of Aging, Second Edition presents the biological principles that have led to a new understanding of the causes of aging and describes how these basic principles help one to understand the human experience of biological aging, longevity, and age-related disease. Intended for undergraduate biology students, it describes how the rate of biological aging is measured; explores the mechanisms underlying cellular aging; discusses the genetic pathways that affect longevity in various organisms; outlines the normal age-related changes and the functional decline that occurs in physiological systems over the lifespan; and considers the implications of modulating the rate of aging and longevity. The book also includes end-of-chapter discussion questions to help students assess their knowledge of the material. Roger McDonald received his Ph.D. from the University of Southern California and is Professor Emeritus in the Department of Nutrition at the University of California, Davis. Dr. McDonald's research focused on mechanisms of cellular aging and the interaction between nutrition and aging. His research addressed two key topics in the field: the relationship between dietary restriction and lifespan, and the effect of aging on circadian rhythms and hypothalamic regulation. You can contact Dr. McDonald at rbmcdonald@ucdavis.edu. Related Titles Ahmad, S. I., ed. Aging: Exploring a Complex Phenomenon (ISBN 978-1-1381-9697-1) Moody, H. R. & J. Sasser. The miracle of life—for a new generation. The completely revised fifth edition of the beloved classic offers an astonishing glimpse of the world within the womb alongside authoritative advice for expectant parents. Deep inside a woman's body, a miracle occurs. An egg and sperm meet and a new human being is created. Through the unique photographs of Lennart Nilsson, we see the fascinating process of fertilization unfold and watch as an embryo develops from a tiny cluster of cells into a fetus, growing and maturing day by day until the time comes to meet the world outside the womb. The book also describes pregnancy from a parent's perspective, diving into maternity care, health during pregnancy, prenatal testing, and labor and delivery. First published nearly fifty years ago, A Child Is Born broke astonishing new ground, bringing the magic of pregnancy and birth to life. This is the fifth edition of the beloved international classic, which teams Nilsson's classic medical photographs with new documentary photographs by Linda Forsell and a revised text by professor Lars Hamberger and midwife Gudrun Abascal.
