"A book that will delight students... Key Texts in Human Geography is a primer of 26 interpretive essays designed to open up the subject's landmark monographs of the past 50 years to critical interpretation... The essays are uniformly excellent and the enthusiasm of the authors for the project shines through... It will find itself at the top of a thousand module handouts." - THE Textbook Guide "Will surely become a ' key text ' itself. Read any chapter and you will want to compare it with another. Before you realize, an afternoon is gone and then you are tracking down

the originals." - Professor James Sidaway, University of Plymouth 'An essential synopsis of essential readings that every human geographer must read. It is highly recommended for those just embarking on their careers as well as those who need a reminder of how and why geography moved from the margins of social thought to its very core.' - Barney Warf, Florida State University Undergraduate geography students are often directed to 'key' texts in the literature but find them difficult to read because of their language and argument. As a result, they fail to get to grips with the subject matter and gravitate towards course textbooks instead. Key Texts in Human Geography serves as a primer and companion to the key texts in human geography published over the past 40 years. It is not a reader, but a volume of 26 interpretive essays highlighting: the significance of the text how the book should be read reactions and controversies surrounding the book the book's long-term legacy. It is an essential reference guide for all students of human geography and provides an invaluable interpretive tool in answering questions about human geography and what constitutes geographical knowledge.

Horizons in Human Geography Simon and Schuster
The application of probability and statistics to an ever-widening number of life-decisions serves to reproduce, reinforce, and widen disparities in the quality of life that different groups of people can enjoy. As a critical technology assessment, the ways in which bad luck early in life increase the probability that hardship and loss will accumulate across the life course are illustrated. Analysis shows the ways in which individual decisions, informed by statistical models, shape the opportunities people face in

both market and non-market environments. Ultimately, this book challenges the actuarial logic and instrumental rationalism that drives public policy and emphasizes the role that the mass media play in justifying its expanded use. Although its arguments and examples take as their primary emphasis the ways in which these decision systems affect the life chances of African-Americans, the findings are also applicable to a broad range of groups burdened by discrimination.

Bestselling author and eminent foreign policy scholar Zbigniew Brzezinski's
classic book on American's strategic mission in the modern world. In *The
Grand Chessboard*, renowned geostrategist Zbigniew Brzezinski delivers a
brutally honest and provocative vision for American preeminence in the

twenty-first century. The task facing the United States, he argues, is to become the sole political arbiter in Eurasian lands and to prevent the emergence of any rival power threatening our material and diplomatic interests. The Eurasian landmass, home to the greatest part of the globe's population, natural resources, and economic activity, is the "grand chessboard" on which America's supremacy will be ratified and challenged in the years to come. In this landmark work of public policy and political science, Brzezinski outlines a groundbreaking and powerful blueprint for America's vital interests in the modern world. In this revised edition, Brzezinski addresses recent global developments including the war in Ukraine, the re-emergence of Russia, and the rise of China.

From Africa to Asia and Latin America, the era of climate wars has begun. Extreme weather is breeding banditry, humanitarian crisis, and state failure. In *Tropic of Chaos*, investigative journalist Christian Parenti travels along the front lines of this gathering catastrophe--the belt of economically and politically battered postcolonial nations and war zones girding the planet's midlatitudes. Here he finds failed states amid climatic disasters. But he also reveals the unsettling presence of Western military forces and explains how they see an opportunity in the crisis to prepare for open-ended global counterinsurgency. Parenti argues that this incipient "climate fascism"--a political hardening of wealthy states-- is bound to fail. The struggling states of the developing world cannot be allowed to collapse, as they will take other nations down as well. Instead, we must work to meet the challenge of climate-driven violence with a very different set of sustainable economic and development policies.

Romantic Geography SAGE

This book cogently examines how human geography has developed from a field with limited self-awareness regarding method and theory to the vibrant study of society and space that it is today. Kevin R. Cox provides an interpretive, critical perspective on Anglo-American geographic thought in the 20th and 21st centuries. He probes the impact of the spatial-quantitative revolution and geography's engagement with other social sciences, particularly in social theory. Key concepts and theories in the field are explained and illustrated with instructive research examples. Cox explores both how new approaches to human geography get constructed and what each school of thought has contributed to understanding the world in which we live.

Place Taylor & Francis

This is one of the few systematic texts on the human geography of western Europe. Its topic-by-topic approach allows a proper examination of the processes which have created spatial variations in human activity. However, whilst the first edition of this book examined the forces creating and remaking the human landscape of western Europe during the post-war era of almost continuous economic growth, the second edition has been set within a more pessimistic environment of stagnation and decline. The oil crisis of 1973-4 was an important turning point in the human geography of western Europe and the late 1970s and 1980s have been characterized by a reversal of many of the processes which were so important in the 1960s. This book, therefore, describes such processes as counter-urbanization, return migration, de-industrialization, the urban-rural manufacturing shift, increasing

unemployment and regional differences, and planning orthodoxies for decline rather than growth. At the same time it retains the elements which made the first edition so successful, such as discussion of the complex and diverse nature of western Europe, with its regional disparities, core-periphery relationships, temporal changes, and varied government policies.

Geopolitics, Geography and Strategy Simon and Schuster

The guiding principle of peacebuilding over the past quarter century has been "liberal peace": the promotion of democracy, capitalism, and respect for human rights in an effort to prevent a reoccurrence of the nationalism, fascism, and economic collapse that led to World War II. This tactic has been relatively successful in reducing war between countries, but it has failed to produce lasting peace at the local level. The goals of peacebuilding have changed over time and place, but have always been built around intervention, with the goal of creating "progress" in post-conflict countries. As Oliver P. Richmond argues in this book, the concept of peace connects the imperial era with the liberal era, and now, neoliberal eras of states and markets, and perhaps with the developing era of technology and mobility. But recent studies have shown that only a minority of modern peace agreements survive for more than a few years. All of this begs the question of the legitimacy and effectiveness of the liberal peace agenda, particularly for scholars looking at the historical development, justifications, and tools for intervention. This book examines the development of the "grand design" and various subsequent attempts to develop a peaceful international order, and its implications for the current international peace architecture. Richmond examines six main theoretical-historical stages in this process, which have produced a substantial, though fragile, international peace architecture, always entangled with, and hindered by, what might be described as a counter-peace framework. He contends that post-WWII liberal peace, which has aimed to balance liberty with regulation through law, democracy, human rights, and freetrade, has recently given way to a retrogressive, technologically driven neoliberal peace, which is more oriented

towards free trade, counter-terrorism and insurgency, surveillance, and state security. The Grand Design provides a sweeping look at the troubled history of peacebuilding in order to consider what the next-stage, "post-liberal peace," might look like.
