Measurement, Instrumentation, and Sensors Handbook

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the

end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

Alasdair Gray is Scotland's best known polymath. Born in 1934 in Glasgow, he graduated in design and mural art from the Glasgow School of Art in 1957. After

decades of surviving by painting and writing TV and radio plays, his first novel, the loosely autobiographical, blackly fantastic Lanark, opened up new imaginative territory for such varied writers as Jonathan Coe, A.L. Kennedy, James Kelman, Janice Galloway and Irvine Welsh. It led Anthony Burgess to call him 'the most important Scottish writer since Sir Walter Scott'. His other published books include 1982 Janine, Poor Things (winner of the Whitbread Award), The Book of Prefaces, The Ends of our Tethers and Old Men in Love. In this book, with reproductions of his murals, portraits, landscapes and illustrations, Gray tells of his failures and successes which have led his pictures to be accepted by a new generation of visual artists. Water-soluble Resins Oxbow Books Bryce Canyon, Carlsbad Caverns, the Grand Canyon, and Mesa Verde are among the 100 destinations covered in this book, which combines the functions of a sightseeing guide and a camp directory. Maps are provided for each destination along with descriptions of tourist attractions and listings for more than 500 campgrounds. Native American sites and desert habitats are also of interest

in this region, making it a great vacation destination for families with children—and perfect for those people who want to escape to a warm climate during the winter.

The Politics of Dental Care in Canada
SAGE Publications

Living for the City is a social history of the Central African Copperbelt, considered as a single region encompassing the neighbouring mining regions of Zambia and the Democratic Republic of Congo. The Haut Katanga and Zambian Copperbelt mine towns have been understood as the vanguard of urban 'modernity' in Africa. Observers found in these towns new African communities that were experiencing what they wrongly understood as a transition from rural 'traditional' society – stable, superstitious and agricultural – to an urban existence characterised by industrial work discipline, the money economy and conspicuous consumption, Christianity, and nuclear families headed by male breadwinners supported by domesticated housewives. Miles Larmer challenges this representation of Copperbelt society, presenting an original analysis which integrates the region's social history with the production of knowledge about it, shaped by both

changing political and intellectual contexts and by Copperbelt communities themselves.

Musculoskeletal Essentials SLACK Incorporated

"Contrary to what some people think, an education and background in chemistry prepares you for much more than just a laboratory career. The broad science education, logical and analytical thinking, research methods, and other professional skills are of value to a wide variety of employers, and are essential for a plethora of positions. In addition, those who are interested in chemistry tend to have some similar personality characteristics, which lead to success in certain types of positions. Realizing these two things opens up a world of possibilities for the professional chemist, and allows the selection of a career path that truly is the best fit for your own personal skills, abilities, and interests." "Each chapter in this book provides background information on a nontraditional field and a variety of positions within that field, including typical tasks, education or training requirements, and personal characteristics that contribute to a successful career. Each chapter also contains detailed profiles of several chemists who have achieved success and

personal satisfaction in various types of positions in that field. These interesting and varied career histories explain how these chemists got where they are, details what motivates them, and gives advice for others considering the same path, in both the short and long term." "Specific career fields profiled include communication, chemical information, patents, sales and marketing, business development, regulatory affairs, public policy, safety, human resources, and computers, among others. Along the way you will learn how to seek out and evaluate new career options, so even if none of the careers profiled is right for you, you can continue the exploration on your own until you find the one that is." --Back cover.

An introduction to applied probability; Assessing significance in a fourfold table; Determining sample sizes needed to detect a difference between two proportions; How to randomize; Sampling method; The analysis of data from

matched samples; The comparison of proportions from several independent samples; Combining evidence from fourfold tables; The effects of misclassification errors; The control of misclassification error; The measurement of interrater agreement; The standardization of rates.

Mood Mapping Pan Macmillan

This book highlights state-of-the-art research on big data and the Internet of Things (IoT), along with related areas to ensure efficient and Internet-compatible IoT systems. It not only discusses big data security and privacy challenges, but also energy-efficient approaches to improving virtual machine placement in cloud computing environments. Big data and the Internet of Things (IoT) are ultimately two sides of the same coin, yet extracting, analyzing and managing IoT data poses a serious challenge. Accordingly, proper analytics infrastructures/platforms should be used to analyze IoT data. Information technology (IT) allows

people to upload, retrieve, store and collect information, which ultimately forms big data. The use of big data analytics has grown tremendously in just the past few years. At the same time, the IoT has entered the public consciousness, sparking people's imaginations as to what a fully connected world can offer. Further, the book discusses the analysis of real-time big data to derive actionable intelligence in enterprise applications in several domains, such as in industry and agriculture. It explores possible automated solutions in daily life, including structures for smart cities and automated home systems based on IoT technology, as well as health care systems that manage large amounts of data (big data) to improve clinical decisions. The book addresses the security and privacy of the IoT and big data technologies, while also revealing the impact of IoT technologies on several scenarios in smart cities design. Intended as a

comprehensive introduction, it offers in-depth analysis and provides scientists, engineers and professionals the latest techniques, frameworks and strategies used in IoT and big data technologies. Lithuanian Horses Canadian Scholars' Press Human bones form the most direct link to understanding how people lived in the past, who they were and where they came from. The interpretative value of human skeletal remains (within their burial context) in terms of past social identity and organisation is awesome, but was, for many years, underexploited by archaeologists. The nineteen papers in this edited volume are an attempt to redress this by marrying the cultural aspects of burial with the anthropology of the deceased. Monacello Motorbooks Rhyming text and labeled illustrations reveal how such northern creatures as white-tailed deer, beavers, red squirrels, and pileated woodpeckers spend the cold winter nights.

Mobile Technologies and Applications for the Internet of Things Humana Press
A buoyant, bittersweet and often plaintively gorgeous travel memoir by Raney, writer and founder of the famous Nickelodeon Theatre in Santa Cruz, California. Raney's debut book follows the arc of a year-long expedition around the world, launched in 1967, at the height of "the summer of love in a summer of death". In San Francisco, where the author lived with his wife JoAnne, hippies and beatniks flooded the streets, and new reports arrived every day from the bloody conflict in Vietnam. The couple decided to decamp for Europe, where the dollar was strong and the possibilities seemed endless. Along for the ride is Tarzan, a fiery dachshund, and a baby boy named Eric Xerxes Raney, known as Zerky. For a while, this quirky little family made its way across the Continent, camping in open fields, cavorting on

beaches and scrambling through the Swiss Alps. The narrative is built on letters Raney wrote to Zerky who would presumably be too young to remember the breadth of these adventures -- and diary entries by JoAnne, a fastidious chronicler of the far-flung. "That there might be a world beyond Europe, a world you could drive to, was something that never occurred to us until six months later", the author remembers, near the beginning of the book. Soon enough, the Raney's caterwauled through Turkey, Pakistan, India and Iran -- a journey that would prove difficult, if not impossible, to duplicate in these pitched political times. In Kabul, Afghanistan, they vividly pick their "way through random passageways and alleyways that were left between buildings at the time of their construction". In Eastern Turkey, they face down a gaggle of armed and angry soldiers. The adventure quotient here is high, but the main ballast of the book is

emotional. Shortly after returning from the expedition, JoAnne, pregnant with her second child, died of an aneurism, and within a year, Zerky was killed while playing near his family's home. The book remains as a testament to the power of the human spirit -- to wander, endure and remember. A chronicle of travels through a bygone world.

Internet of Things and Big Data Analytics Toward Next-Generation Intelligence Sigma Press
When the strange looking Neapolitan foundling known as Monacello takes to the streets, he is hated and feared as a bringer of bad luck, and sought out as a source of good luck, as he searches for his mother and befriends a homeless girl.

Living for the City Prologika Press
Filling a gap in the health policy literature, author and dental public health specialist Dr. Carlos Quiñonez explores the complexities surrounding Canada's dental care system and policies, including how they came to be, their consequences, and what they

mean for oral health and access to dental care. The Politics of Dental Care in Canada seeks to answer a long standing policy question in Canadian health care: Why is dental care excluded from Canada's national system of health insurance, Medicare? The text presents a history of dentistry in Canada from the late 19th century onward, outlining how dentistry traversed a developing Canadian welfare state. Dr. Quiñonez explores factors that led to dentistry's separation from larger movements in health care policy, including moral questions on individual versus social responsibility over health, scientific advances in the field, and prevailing economic uncertainty. Opening with a series introduction by Dr. Dennis Raphael, this vital text offers an extensive overview on how the politics of dental care contributes to inequalities and inequities in oral health. From discussing scientific and public health advances in dentistry to looking at the general nature of oral health care in Canada from an international perspective, this text serves as an important addition to the

field of health policy and a foundational resource for courses in dentistry, health studies, and comparative health policy. FEATURES - Comprehensively discusses the current state of Canadian dental care policy, the history and factors that led to the policy, and the resulting outcomes and inequalities - Presents the latest available information on the epidemiology of oral diseases and conditions; the connection between oral health and systemic health; and the organization, financing, and delivery of oral health care in Canada and internationally
