What could be worse than being stuck in an office all day? Meetings, deadlines... colleagues. Surely no torture can crush the spirit so completely as prolonged exposure to these people. You've faked phone calls to avoid them. You've hidden in toilet cubicles until they've gone away. At last there's an effective way to fight back. Pains in the Office will help you identify, shun and plan your revenge on the 50 worst types of people you meet at work. Your job may be awful, you may hate your colleagues with a passion, but here at least is a happy place to retreat into. This is your comfort blanket, hidey-hole and fire escape all rolled into one. Pains in the Office is guaranteed to become as indispensable to the office worker as cigarette breaks and free stationery. It's the perfect antidote to nightmarish co-workers everywhere!

Listen then, and I'll tell you again of the Battle of the Rock. But none of your usual wriggling, or I'll stop before I've begun . . . Halli loves the old stories from when the valley was a wild and dangerous place - when the twelve legendary heroes stood together to defeat the ancient enemy, the bloodthirsty Trows. Halli longs for adventure but these days the most dangerous thing in the valley is boredom. He tries to liven things up by playing practical jokes. But when one of his jokes goes too far, he reawakens an old blood feud and finds himself on a hero's quest after all. Along the way he meets a ruthless thief, a murderous rival, and a girl who may just be as fearless as he is . . . Jonathan Stroud has created an epic saga with a funny, unique spin, and an unforgettable anti-hero.

The Navy has numerous bases located in seismically active regions throughout the world. Safe and effective structural design of waterfront facilities requires calculating the expected site specific ground motion and determining the response of these complex structures to the induced loading. The Navy's problem is further complicated by the presence of soft saturated marginal soils which can significantly amplify the levels of seismic shaking and liquefy as evidenced in the 1939 Loma Prieta earthquake. Liquefaction is a major factor at the waterfront and most of the damage the Navy has sustained from earthquakes can be attributed to it. The presence of unconsolidated loose cohesionless soils and the high water table makes waterfront sites especially vulnerable. This report establishes liquefaction criteria suited for the design of new facilities and upgrade of existing facilities. The criteria developed herein presents reasonable performance standards balancing performance and damage minimization against the cost of implementation.
