Trees are among the
longest-living organisms.
They are sensitive to

extreme climatic events and document the effects of environmental changes in form of structural modifications of their tissues. These modifications represent an integrated signal of complex biological responses enforced by the environment. For example, temporal change in stem increment integrates multiple information of tree performance, and wood anatomical traits may be altered by climatic extremes or	environmental stress. Recent developments in preparative tools and computational image analysis enable to quantify changes in wood anatomical features, like vessel density or vessel size. Thus, impacts on their functioning can be related to climatic forcing factors. Similarly, new developments in monitoring (cambial) phenology and mechanistic modelling are enlightening the interrelationships between environmental	factors, wood formation and tree performance and mortality. Quantitative wood anatomy is a reliable indicator of drought occurrence during the growing season, and therefore has been studied intensively in recent years. The variability in wood anatomy not only alters the biological and hydraulic functioning of a tree, but may also influence the technological properties of wood, with substantial impacts in forestry. On a

larger scale, alterations of genetic variation and sapwood and phloem area heritability of adaptive and their ratios to other traits might define the functional traits provide ability to adapt to climate measures to detect change. Is there a relation changes in a tree ' s life between genetic functions, and increasing variability and resilience risk of drought-induced to climate change? Is it mortality with possible possible to link genetic impacts on hydrological expression and climate processes and species change to obtain deeper composition of plant knowledge of functional communities. Genetic genetics? To derive variability within and precise estimates of across populations is genetic determinism it is assumed to be crucial for important to define species survival in an adaptive traits in wood unpredictable future properties and on a whole world. The magnitude of tree scale. Understanding the mechanisms ruling these processes is fundamental to assess the impact of extreme climate events on forest ecosystems, and to provide realistic scenarios of tree responses to changing climates. Wood is also a major carbon sink with a long-term residence, impacting the global carbon cycle. How well do we understand the link between wood growth dynamics, wood carbon allocation and the global carbon cycle? Papers

contribution to this Research Topic will cover a wide range of ecosystems. However, special relevance will be given to Mediterranean-type areas. These involve coastal regions of four continents, making Mediterranean-type ecosystems extremely interesting for investigating the potential impacts of global change on growth and for studying responses of woody plants under extreme environmental conditions. For example,

the ongoing trend towards warmer temperatures and reduced precipitation can increase the susceptibility to fire and pests. The EU-funded COST Action STREeSS (Studying Tree Responses to extreme Events: a SynthesiS) addresses such crucial tree biological and forest ecological issues by providing a collection of important methodological and scientific insights, about the current state of knowledge, and by opinions for future research needs.

Sand Dunes of the Northern Hemisphere: Distribution, Formation, Migration and Management Follett
The authors present an introduction to the use of scientific methods in the study of the behavior of individual subjects across a wide range of settings. This straightforward and practical text offers in-depth coverage of every aspect of the research process - including science and the analysis of behavior, designing

experiments, data collection, and graphic analysis of data - and provides practical suggestions for averting problems at each stage. Chapters include methods for presenting data at conferences and in journal articles.

ESRI, Inc. When it comes to handguns, few can match Elmer Keith's depth of experience and knowledge. Informed by a long life of shooting, hunting, and experimenting with gun and bullet design, Sixguns is the definitive work on the history,

design, and use of revolvers. Inside you'll find: Detailed photographs and descriptions of old and rare guns and ammunition Advice and information about long range shooting, game shooting, and double action shooting Lessons on trick shooting, quick draws, and hip shooting Chapters on bullets, cartridge selection, and cartridge reloading Guides for revolver repairs as well as general care and cleaning and much more... A truly one-of-a-kind book from a bonafide legend of the American west, Elmer Keith's Sixguns is the leading gun resource available. This book is required reading for target shooters, hunters,

sportsmen, and anyone who loves a good handgun. Sixguns Springer Nature Volume 2 of the book 'Sand Dunes of the Northern Hemisphere' is sub-titled Characteristics, Dynamics and Provenance of Sand Dunes in the Northern Hemisphere. It brings together a vast body of information and insight into sand dune and desert systems from North Asia, Central Asia, North Africa and the Middle East. Chapters from the Russian Federation include studies on dune systems within the permafrost zone and there is a case study from temperate

<p>zone dune system in coastal Japan. Volume 2: Characteristics, Dynamics and Provenance of Sand Dunes in the Northern Hemisphere of 16 chapters in three Parts, focusses on Saharan Africa, Egypt, and Middle East and gives attention to sand mobility and encroachment with case studies from a number of countries where these matters are of concern. We also include chapters on the remote dunes in the permafrost zone and in the hyper-arid deserts of Iran. Case studies are used to highlight the characteristics of dunes and their interaction with humans in</p>	<p>several widely divergent settings. Volume 2 concludes with some musing on the value of study of the past as key to the future and speculates on what the future might hold in the light of a warmer and drier Earth and a rise in sea level that threaten large tracts of low-lying land with marine incursions and destruction from storm surge. PART 4 Sand Mobility and Encroachment The seven chapters in this Part examine the real-world impact of sand encroachment and dune migration on people and their economic activities and the health, welfare and financial</p>	<p>implications related to destruction of infrastructure, including human habitations. PART 5 Sand Dune Landscapes Distribution, Formation and Management Seven Case studies from several geographic regions in Africa, the Middle East, north-east Asia are presented here to demonstrate the underlying mechanisms in dune formation and the diverse approaches to their management. Human impacts such as sand mining, tourism development, combine with natural forces like climate variability to challenge the realization of an optimum</p>

management strategy. PART 6
Concluding Thoughts: Coping
with an Unknown Future from
a Little-known Past The two
chapters in Part 6 have special
roles. We are privileged to
publish new research findings
that are summarized here in
Chapter 38 from extensive and
detailed work conducted in the
Kyzyl Kum, and Karakum sand
seas of Central Asia. There is a
strong belief that further study
of the little-known past such as
revealed in this study could
unlock clues as to what a future
Earth might look like. This
leads on to speculation in
Chapter 39 about the

implications of what we already
know about global change (not
only climate change) and the
impact of the Anthropocene on
the dune systems, both inland
and coastal. Sea level rise,
marine incursions and an
increase in extreme weather
events will affect dune systems
and sand seas on the Northern
Hemisphere (and beyond).

Materials from renewable

resources have attracted increasing attention in recent decades as a result of environmental concerns and due to the depletion of petroleum resources. Polymeric materials from renewable sources have a long history. They were used in ancient times and later accompanied the development of man and civilization. Currently, they are widespread in many areas of life and used, for example, in packaging and in the automotive, construction and pharmaceutical industries. The aim of this Special Issue is to highlight the progress in the

manufacturing, characterization, and applications of environmentally friendly polymeric blends from renewable resources. The following aspects were investigated: (i) synthesis of composites based on natural fillers; (ii) chemical modification of polymers or fillers in order to improve interfacial interactions; (iii) potential applications of the biobased materials. My Québec Springer Science & Business Media The American Deer Hunter is the result of a great amount of experience in hunting with an extraordinary degree of

success. The content represents the determination to set down the hard facts and the effective equipment and means for stalking and shooting the white-tail and his cousins. The book is highly original in its presentation. It is in no sense a rehash of previous discussions or formulae. The author deals at all times with actual problems of locating, maneuvering, and shooting and with the guns employed. The discussions are based on circumstances of reality in the relationships of deer, environment, hunter and gun, not on preconceived or

synthetic situations. Here are interesting and important data on deer habits and on speeds and gaits. Here also is an extensive treatment of selection and care of weapons for deer hunting; the killing and dressing of game; and even on clothing for the deer hunter. All told, it has a wealth of material useful to both the veteran hunter and the novice.

This book constitutes the refereed proceedings of the 17th IFIP WG 2.13

International Conference on Open Source Systems, OSS

2021, held virtually in May 2021. The 4 full papers and 3 short papers presented were carefully reviewed and selected from 23 submissions.

The papers cover a wide range of topics in the field of free/libre open source software (FLOSS) and discuss theories, practices, experiences, and tools on development and applications of OSS systems, with a specific focus on two aspects:(a) the development of open source systems and the underlying technical, social, and economic issue,

(b) the adoption of OSS solutions and the implications of such adoption both in the public and in the private sector.
