Ferrari Fever is a fascinating and nostalgic look back at the classic car collecting scene in the 60's and 70's, an era when some of the rarest and most interesting Italian automobiles could still be found hidden or languishing in barns, junkyards or by the side of the road...almost lost in time. Paul Schouwenburg's story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents' succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars -from the early 60s onwards, he begins to uncover several rare Alfas, from 1900CSS Zagato to Tipo 33/2, in addition

to a host of very special Ferraris, including a 250GTO, 340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn't exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box, Paul's passion and incredible drive make for exciting reading. Indeed this is a unique take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn't even give away his 250 GTO at the time!

Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and

structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Pucker or Puckering is the most used (abused?) term in the garment manufacturing industry. Pick up any quality controllers report, and the first thing that will strike your eye will be "...Puckering in armhole, ...Puckering in neckline binding, ...control Puckering in bottom hem..." the list is endless. Buying office quality controllers are as enamoured of this term as much as manufacturers abhor it. What is it that makes it so distasteful? Why does it occur? How can it be controlled? While there are numerous leaflets, documents and articles available on pucker, we have found that the majority of them lay great stress on "inherent pucker" (only material parameters). In this booklet have tried to include process parameters as well as sewing of lightweight fabrics. All said and done, the problem is so intricately interdependent that exhaustive compilation is well nigh impossible. We are sure this booklet will help manufacturers to understand the rationale behind this publication and we will consider our effort successful if enthusiastic readers regularly inform us about newer methods to tackle the problem.

Radio Frequency and Microwave Electronics Illustrated Gun Digest

In the early 1980s, two water-supply systems on the Marine Corps Base Camp Lejeune in North Carolina were found to be contaminated with the industrial solvents trichloroethylene (TCE) and perchloroethylene (PCE). The water systems were supplied by the Tarawa Terrace and Hadnot Point watertreatment plants, which served enlisted-family housing, barracks for unmarried service personnel, base administrative offices, schools, and recreational areas. The Hadnot Point water system also served

the base hospital and an industrial area and supplied water to housing on the Holcomb Boulevard water system (full-time until 1972 and periodically thereafter). This book examines what is known about the contamination of the water supplies at Camp Lejeune and whether the contamination can be linked to any adverse health outcomes in former residents and workers at the base.

Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications-in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, *Radio Frequency and Microwave Electronics Illustrated* is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and

effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion. Applications include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators. The book is intended to provide a workable knowledge and intuitive understanding of RF and microwave electronic circuit design. Radio Frequency and Microwave Electronics Illustrated includes a comprehensive glossary, plus appendices covering key symbols, physical constants, mathematical identities/formulas, classical laws of electricity and magnetism, Computer-Aided-Design (CAD) examples and more. About the Web Site The accompanying web site has an "E-Book" containing actual design examples and methodology from the text, in Microsoft Excel environment, where files can easily be manipulated with fresh data for a new design.

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. "All good marketing is local. Global companies know this and are going "glocal." There is also a trend towards the Internet of Everything, which revolutionizes the whole marketing discipline. Svend Hollensen has captured all the latest trends very well with the new cases in his seventh edition of *Global Marketing*." Philip Kotler, S. C. Johnson & Son Distinguished Professor of International Marketing, Kellogg School of Management, Northwestern University In this era of increased globalisation, if there is one textbook that today's students and tomorrow's marketers need to read, it is Svend Hollensen's world renowned text. For over fifteen years "Global Marketing" has been the definitive, truly international guide to marketing. During that time, borders have become ever more transient and this book more central to the work of marketers all around the world. Now into its seventh edition, "Global Marketing" continues to be the most up-to-date and thorough text of its kind, with cutting-edge case studies and a focus on the impact of new technologies and perspectives on international marketing. This seventh edition expands on a number of new topics,

including: shared economy solutions, social media, e-services and smartwatch app marketing, as well as many more. It is ideal for undergraduate and postgraduate students studying international marketing, and for any practitioners who want to take their global marketing strategies to the next level. "The world today truly is flat, and a sound global perspective is an absolute must for all students. SvendHollensen'sGlobal Marketingprovides a thorough and comprehensive treatment that delivers on this need." Michael R.
