She's the one woman I'd give anything to forget--and now I'm stuck living with her. I'm making a fresh start in Lake Tahoe, until my stubborn sister decides to move Mira into our cabin. I'll be damned if I move out on Mira's account. Nothing has changed in the years since I last saw Mira. Her tempting body and smart mouth taunt me daily. The only hope I have at keeping my sanity is the knowledge that Mira is hiding something. Sooner or later I'll discover her secret, and knowing her, it'll be damning. But first, I have to ignore the urge to kiss and touch and make Mira mine again. --EXCERPT-- I grab her waist, guiding her back against the shelves. She kisses my cheekbone, nibbles my earlobe. "We

can't do this here." That nibble shoots straight to my groin. "I beg to differ. I think we can manage." Once the walls come down, emotions run hot. "Manufacturing Processes and Equipment" by George Tlusty describes and explains existing production processes and machinery. More importantly, it uses the powerful analytical tools of machine science (heat transfer, vibrations, control theory) and applies them to the solution of manufacturing problems. There is more emphasis on the analytical development and application of engineering theory to manufacturing problems and students are encouraged to generate their own computer solutions to gain

understanding. Unique features Integrates analytical tools from other machine science subjects (e.g., heat transfer, vibrations, control theory) and applies them to manufacturing processes Includes chapters on machine tools and other production equipment, discussing the aspects of performance and design drives, structures, and controls Emphasizes understanding of production machinery, its improvement and automation, so students are able to specify, select, install, and use new equipment Presents analytical development and necessary derivations in some detail and encourages students to develop their own computer programs to solve problems

This innovative and user-friendly book uses a design thinking approach to examine transformative learning and liminality in physical education. Covering theory and practice, it introduces the important idea of ‘ threshold concepts ’ for physical education, helping physical educators to introduce those concepts into curriculum, pedagogy and assessment. The book invites us to reflect on what is learned in, through and about physical education - to identify its core threshold concepts. Once identified, the book explains how the learning of threshold concepts can be planned using principles of pedagogical translation for all four learning domains (cognitive, psychomotor, affective and social). The book is

arranged into three key sections which walk the reader through the underpinning concepts, use movement case studies to explore and generate threshold concepts in physical education using design thinking approach and, finally, provide a guiding Praxis Matrix for PE Threshold Concepts that can be used for physical educators across a range of school and physical activity learning contexts. Outlining fundamental theory and useful, practical teaching and coaching advice, this book is invaluable reading for all PE teacher educators, coach educators, and any advanced student, coach or teacher looking to enrich their knowledge and professional practice.

Strategies for Growth
in SMEs explores for

the first time the role of information and information systems (IS) concepts in small and medium-sized enterprises (SMEs). Most IS research focuses on large firms, yet the majority of firms in most economies are SMEs. The book considers the applicability of IS theory and practice to SMEs and develops new theories that are relevant to these firms. Composed of 6 sections, it covers, amongst other things; the nature of SMEs, the background to IS, and SMEs' use of IS, issues of IS strategy and planning in SMEs, the way that firms can transform through use of IS, evaluation, IS

flexibility, business process re-engineering, resource-based strategy and knowledge management, the appropriateness of existing theories and the development of new models to address SME-specific issues. The final section of the book reviews the learning in the previous chapters and poses future agendas for research. Written by two of the leading figures in the field, this book will be essential reading for researchers in IS and SMEs, students on entrepreneurship or IS courses, and others that focus on SMEs. * A unique text relating IS theory to SMEs * Benefit from the authors' years of experience in the field * Familiarise yourself with this growth area for research and courses
