This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been commonly referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and O (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Intelligent Coatings for Corrosion Control covers the most current and comprehensive information on the emerging field of intelligent coatings. The book begins with a fundamental discussion of corrosion and corrosion protection through coatings, setting the stage for deeper discussion of the various types of smart coatings currently in use and in development, outlining their methods of synthesis and characterization, and their applications in a variety of corrosion settings. Further chapters provide insight into the ongoing research, current trends, and technical challenges in this rapidly progressing field. Reviews fundamentals of corrosion and coatings for corrosion control before delving into a discussion of intelligent coatings—useful for researchers and grad students new to the subject. Covers the most current developments in intelligent coatings for corrosion control as presented by top researchers in the field. Includes many examples of current and potential applications of smart coatings to a variety of corrosion problems.

Daniel O'Connell Butterworth-Heinemann

In *Tom Kundig: Works*, the celebrated Seattle-based architect presents nineteen new projects, from Hawaii to New York City. Kundig's award-winning houses, known for their rugged yet elegant and welcoming style, are showcased in lush photography with drawings and sketches, and appear alongside his commercial work—from multistory complexes to the Tacoma Art Museum to a line of hardware (handles, door pulls, hinges, and more). In firsthand accounts, Kundig describes the projects and his design process with many personal anecdotes, making *Tom Kundig: Works* as much memoir as monograph. The book also includes an introduction by design editor Pilar Viladas and in-depth conversations with Kundig's frequent collaborators—"gizmodomist" Phil Turner and contractor Jim Dow (Schuchart/ Dow)—and clients (Bigwood Residence and Studhorse).

The Vintage Mencken Cengage Learning

Complex Organismal Functions: Integration and Evolution in Vertebrates D. B. Wake G. Roth Editors The complexity of forms and functions of organisms studied in an evolutionary context prompts a fundamental question of modern biology: how did complex functional systems, apparently stabilized by high degrees of integration, evolve to their present diversity? This and related questions were discussed by 48 distinguished scientists from many fields of vertebrate biology, including functional and comparative morphologists, neurobiologists, reproductive biologists and endocrinologists, developmental biologists, ecologists, ethologists, population geneticists, and theorists, at a Dahlem Workshop. This volume is a report of that meeting. The major areas of discussion were: evolutionary diversification of feeding mechanisms; evolution of locomotor systems; trends in reproductive biology, especially the repeated evolution of vertebrate viviparity; and alternative and complementary concepts of the production of evolutionary novelties and patterns. These topics reflect the excitement and dynamism of current debate in evolutionary biology and constitute a cohesive point of departure for further research.

Opportunities and optimism in Aging. Issues in Aging, 3rd edition takes an optimistic view of aging and human potential in later life. This book presents the most up-to-date facts on aging today, the issues raised by these facts, and the societal and individual responses that will create a successful old age for us all. Mark Novak presents the full picture of aging—exhibiting both the problems and the opportunities that accompany older age. The text illustrates how generations are dependent on one another and how social conditions affect both the individual and social institutions. **Learning Goals** -Upon completing this book, readers will be able to: -Understand how large-scale social issues--social attitudes, the study of aging, and demographic issues--affect individuals and social institutions -Identify the political responses to aging and how individuals can create a better old age for themselves and the people they know -Separate the myths from the realities of aging -Recognize the human side of aging -Trace the transformation of pension plans, health, and opportunities for

personal expression and social engagement to the new ecology of aging today

Differentiated book- It has a historical context with research of the time-This book contains a historical context, where past events or the study and narration of these events are examined. The historical context refers to the circumstances and incidents surrounding an event. This context is formed by everything that, in some way, influences the event when it happens. A fact is always tied to its time: that is, to its time. Therefore, when analyzing events that took place tens, hundreds or thousands of years ago, it is essential to know the historical context to understand them. Otherwise, we would be analyzing and judging what happened in a totally different era with a current perspective. *How the Other Half Lives: Studies Between New York's Neighborhood Houses* (Original title in English *How the Other Half Lives: Studies Among the Tenements of New York*) was one of the pioneering works of photojournalism by Jacob Riis in 1888. The Originally illustrated with halftones and engravings based on his photographs, the book denounces the living conditions in the working-class neighborhoods of New York City in the 1980s; it was a model of the way in which journalism and, in particular, photo journalism, could echo marginal situations that occurred in the middle and upper classes of a society.

The Psalms, ESV (Press-Grain Paperback) Createspace Indie Pub Platform

'This book, informed by exceptionally wide inquiry into current history teaching practices in the English-speaking world, is a real achievement. The authors convey current context and challenges with great insight, and they move through possibilities in sequencing, content, skills and assessment, without strident comment, extending our knowledge of options and pitfalls in the process' - Peter N. Stearns, Provost, George Mason University 'Comprehensive, persuasive, and at all times accessible in style and argument, this text both encourages and empowers university historians to review and enhance their teaching practices. All key facets of programme development are explored with reference to an extensive and well-chosen range of international examples. The chapter on the historian's skills and qualities of mind is one of several that I will be referring to frequently' - Jeanine Graham, Senior Lecturer, History, University of Waikato '... the varied findings make fascinating reading ... this book should be required reading for everyone involved in teaching history: there is plenty here for us all to learn from' - ESCalate 'In providing such a clear, informative and thoughtful exploration of the current state of history in higher education, and in helping to raise the quality of critical debate about its future, this book contributes greatly to the growing scholarship of teaching and learning in the discipline. It should also become a vital resource for all historians who wish to honour the old dictum that, in teaching as in research, the one duty we owe history is to rewrite it' - Professor Paul Hyland, Director of History in the Subject Centre for History, Classics and Archaeology '[E]xtremely useful... provides a thought-provoking and useful discussion concerning the task of actually teaching history at university level... This timely book needs to be read widely, and the many issues it raises should command our closest attention' - Higher Education Review Over the last 10 years or so, history as an academic discipline has become steeped in controversy and introspection. Additional areas of interest have opened up, fresh perspectives and approaches have been offered, and new teaching and learning strategies have been advocated. There has been an increasing emphasis on producing well-qualified graduates equipped with the skills, knowledge and attitudes to cope with the changing demands of the world of work. This book suggests how these issues may be managed. The authors identify and discuss the underlying principles, and consider ways in which they can be applied at module and programme levels. The *Teaching & Learning in the Humanities* series, edited by Ellie Chambers and Jan Parker, is for beginning and experienced lecturers. It deals with all aspects of

teaching individual arts and humanities subjects in higher education. Experienced teachers offer authoritative suggestions on how to become critically reflective about discipline-specific practices.
