Josh Dorfman ' s perspective is a leading voice for anyone involved in new consumer-based environmentalism. † ?—Tom Arnold, TerraPass We can ' t all camp out in old-growth forests, lying down in front of the bulldozers. And it ' s not only that we ' re too busy: Some of us just don ' t want our fabulous threads to get caked with mud. But that doesn ' t

mean we don ' t care passionately about their bathroom fixtures. Covering the environment. Luckily, the days when becoming environmentally aware entailed eating bread that tasted like dirt, wearing clothes that looked like frayed burlap sacks, and spending summer vacations assailing whaling ships with Greenpeace are passing away. It is now perfectly possible (and increasingly easy) to be well fed, well coiffed, well dressed, and well traveled while remaining deeply committed to an ecologically sustainable lifestyle. In The Lazy Environmentalist, Josh Dorfman—host of the Sirius Satellite Radio program of the same name—provides comprehensive guidance to fashion-forward consumers who are as concerned about the long-term health of our planet as they are about the design of topics that range from clothing to electronic gadgetry, home decor to recreation, and gardening to financial investment, Dorfman lets us know which trends to watch and which eco-conscious products—cars, toothbrushes, cell phones, pet accessories—to buy. Green, it turns out, can be an extremely stylish color. Every day most of us have to choose between products that either look the same or do the same thing. So why not buy the product that causes the least harm to the planet? The Lazy Environmentalist is a useful guide toward making the right decisions." - Yvon Chouinard, founder and owner, Patagonia, Inc. "Everything you always wanted to know about greener living but were afraid to spend the rest of

your life researching. Here's a great start." - Chris Paine, writer and director, *Who Killed the Electric Car?*  
"Instead of thinking about it ... DO IT. Buy this amazing book and get the scoop on products and ways to take care of this great planet. Become part of the movement that is loving the earth the way it truly deserves to be cared for! †? -Mariel Hemingway, actress and author of *Healthy Living from the Inside Out*

Technology-based firms continue to compete primarily on innovation, and one continuously required to present new solutions to an exacting market. As technological complexity and specialization intensifies, firms increasingly need to integrate and co-ordinate knowledge by means of project groups, diversified organizations, inter-organizational partnerships, and strategic alliances. Innovation processes have progressively become interdisciplinary, collaborative, inter-organizational, and international, and a firm's ability to synthesize knowledge across disciplines, organizations, and geographical locations has a major influence on its viability and success. This book demonstrates how knowledge integration is crucial in facilitating

innovation within modern firms. This book provides original, detailed empirical studies of prerequisites, mechanisms, and outcomes of knowledge integration processes on several organizational levels, from key individuals, projects, and internal organizations, to collaboration between firms. It stresses the need to understand knowledge integration as a multi-level phenomenon, which requires a broad repertoire of organizational and technical means. It further clarifies the need for strong internal capabilities for exploiting external knowledge, reveals how costs of knowledge integration affect outcomes and strategic decisions, and discusses the managerial implications of fostering knowledge integration, providing practical guidance and support for managers of knowledge integration in high technology enterprises.

Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other

assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

This book addresses the intersection of entrepreneurship, innovation and sustainability (EIS), presenting high-quality research illuminating the relationship between the three fields. The EIS nexus is particularly relevant from a European point of view given the focus of the European Commission on corporate social responsibility (CSR) and sustainability, as well as their prominent role within the European Union in general. Also, the rapid economic growth witnessed especially in the BRIC countries in recent years requires that firms reconcile sustainability aspects with profitability and innovation, and entrepreneurs are seen as key diffusers of these aims. Sustainability requires both radical and incremental innovation at many different levels (technology, product, process, system). In many cases, such innovations come from small

and medium-sized enterprises and so the role of the entrepreneur is key to their success. The book is split into six sections. The first section examines the nexus in detail focusing on system-oriented connectivity between sustainability, innovation and entrepreneurship. The second section looks at how to nurture corporate entrepreneurship for sustainability; and the third considers "mature" industries such as automotives, chemicals and electronics and how sustainability aspects can be integrated into innovation process and strategy. The fourth section examines the nexus through the lens of developing countries in Africa. Sustainable entrepreneurship is identified as a hugely beneficial way to foster development. The fifth section of the book concentrates on SMEs; and finally the EIS nexus is approached from a network perspective and focuses on inter-organisational partnerships, which are often an important facilitator or spark for EIS initiatives. This book will prove to be essential for researchers in the EIS nexus and be of invaluable help to practitioners, governments and inter-governmental bodies attempting to encourage sustainable entrepreneurship and innovation.

The environmental movement and the rising

awareness of global warming have spiked an interest in green living. It's not just recycling now. People want to know what they can do to live sustainable lives. What changes do they need to make as consumers and citizens? What are the relative impacts of the changes-that is, which will have the greater impact? They've made up their minds that green living is their goal, so they're not asking for a sermon. They just want simple, how-to facts.

Global warming is the greatest environmental threat facing humanity. From killer heat waves and increasingly violent weather to the spread of pests and vector-borne diseases, global warming has many effects on our lives. While some are positive, most are negative. People fear potentially catastrophic consequences but there is a disturbing lack of understanding about global warming and what can be done about it. In *Global Warming* Chris Spence breaks through the jargon, offering readers both a clear description of the problem and a practical guide to solutions, from decreasing reliance on automobiles to increased recycling to political activism. It offers hope that each of us can be doing something to solve the problem and encourages us to act--not only for ourselves, but for our children and grandchildren.
