Alistair Lennox's thesis reports on the reactivity of organotrifluoroborates, which are becoming increasingly important reagents in synthesis. The thesis is divided into three sections. The first section describes a method for preparing organotrifluoroborates. The second section reports on a mechanistic investigation into the main application of RBF<sub>3</sub>K reagents as coupling partners in Suzuki-Miyaura coupling, phenomena identified as arising from organotrifluoroborate hydrolysis and fluoride release. The final section reports on a detailed investigation into the hydrolysis mechanism, a prerequisite for their Suzuki-Miyaura coupling, and how it may be predicted and controlled. This research has uncovered many interesting and useful details and shows how problems associated with Suzuki-Miyaura coupling can best be addressed. There has already been wide industrial uptake of the new procedures and insights. The broad nature and clear and succinct style will make the thesis a valuable resource for anyone working in synthesis, organometallic chemistry, or in homogeneous catalysis. Advances in Lipid Research, Volume 3 presents the analysis of human serum lipoproteins and emphasizes the possibilities inherent in the application of computer methods to such analyses. This book discusses the effects of various drugs on the other important component of the serum lipids, the phospholipids. Organized into six chapters, this volume begins with an overview of the possibility of a dehydrogenation toward the methyl group. This text then presents a detailed discussion of lipoprotein structure, metabolism, and catabolism. Other chapters consider some potentially significant revisions in lipoprotein procedure, including additions to the technology of lipoprotein analysis. This book discusses as well the chemistry and metabolism of plasma lipoprotein as related to physiological and disease states. The final chapter deals with the advances in methods of purification and studies of the properties and mode of action of lipases. This book is a valuable resource for organic chemists, neurochemists, and biochemists.
