A home hydroponics system tends to use some non-soil medium to support the roots of the plant. With regards to easy growing, the ideal hydroponic system uses something fairly porous or loose. This enables the gardener to plant seeds directly into the racks rather than attempting to transfer a plant once it has

sprouted.

Hydroponics is a type of horticulture and a subset of hydroculture, which is a method of growing plants, usually crops, without soil, by using mineral nutrient solutions in an aqueous solvent. Terrestrial plants may be grown with only their roots exposed to the nutritious liquid, or, in addition, the roots may be physically supported by an inert medium such as perlite, gravel, or other substrates.

When summer ends, a lot of our gardens close for the winter. But hydroponics keep your garden going year-round. Rather than counting on the soil to provide plants with nutrients, a hydroponic ...

Hydroponics is the science of growing

plants without using soil, by feeding them on mineral nutrient salts dissolved in water. There has been renewed interest in this method following wider installation of living walls, roof gardens and other growing situations where conventional potting media is too heavy, inaccessible or bulky.
