Timothy Bloxam Morton is a professor and Rita Shea Guffey Chair in English at Rice University. A member of the object-oriented philosophy movement, Morton's work explores the intersection of object-oriented thought and ecological studies. Morton's use of the term 'hyperobjects' was inspired by Björk's 1996 single 'Hyperballad' although the term 'Hyperobjects' has also been used in computer science since 1967. Morton uses the term to explain objects so massively distributed in time and space as

Hyperobjects: Philosophy and Ecology after the End of the ... In The Ecological Thought I coined the term hyperobjects to refer to things that are massively distributed in time and space relative to humans. <sup>1</sup> A hyperobject could be a black hole. A hyperobject could be the Lago Agrio oil field in Ecuador, or the Florida Everglades. A hyperobject could be the biosphere, or the Solar System.

HYPEROBJECTS - University of Warwick

Moving fluidly between philosophy, science, literature, visual and conceptual art, and popular culture, the book argues that hyperobjects show that the end of the world has already occurred in the sense that concepts such as world, nature, and even environment are no longer a meaningful horizon against which human events take place.

"Weakness" is a term that Tim Morton uses in his most recent book Hyperobjects: Philosophy and Ecology After the End of the World.

"Weakness" is the fact that for humans, or any other observing subject, the appearance of something can never capture the entirety of that object.

Insisting that we have to reinvent how we think to even begin to comprehend the world we now live in, Hyperobjects takes the first steps, outlining a genuinely postmodern ecological approach to thought and action.
