Materials Handling News MARGE BOOKS

Este manual se dirige a los profesionales relacionados con la utilización de las carretillas elevadoras. Tanto a las personas que las manejan, como a las que intervienen en su comercialización, a los que forman sobre su uso y a las que se ocupan de prevenir sus riesgos. Pero, especialmente, está pensado para quienes han de tomar decisiones sobre la adquisición y la gestión de estas máquinas, los responsables de logística de las organizaciones. Desde su primera edición en 1990, al compás de los continuos avances tecnológicos, esta sexta edición sigue siendo un título de consulta obligada, un compendio que permite considerarlo una obra absoluta, donde se reúne todo el conocimiento relativo a las carretillas elevadoras. El autor aborda todos los aspectos sobre las carretillas: ergonomía, seguridad, morfología, sistemas de elevación, implementos, accionamientos, motores, aplicaciones, mantenimiento y reparación, así como las diferentes tipologías de las máquinas y la necesaria formación para un manejo seguro. Todo ello con profusión de información técnica, cuadros, tablas, planos y despieces, fotografías y descripciones, con lógica argumental y profundidad didáctica. Vicenç Ripoll posee una amplia experiencia en marketing industrial, en formación ocupacional, en prevención de riesgos laborales y en el flujo físico de materiales con equipos autopropulsados.

Moody's Industrial Manual

This book, first published in 1987, is about the classic free will problem, construed in terms of the implications of moral responsibility. The principal thesis is that the core issue is metaphysical: can scientific laws postulate objectively necessary connections between an action and its causal antecedents? The author concludes they cannot, and that, therefore, free will and determinism can be reconciled.
