Antistatic sprays
from several
different
manufacturers are
examined. The
sprays are
examined for
contamination
potential (i.e.,
outgassing and
nonvolatile residue),
corrosiveness on an
aluminum mirror
surface, and
electrostatic
effectiveness. In
addition, the
chemical
composition of the
antistatic sprays is

determined by
infrared
spectrophotometry,
mass spectrometry,
and ultraviolet
spectrophotometry.
The results show
that 12 of the 17
antistatic sprays
examined have a
low contamination
potential. Of these
sprays, 7 are also
noncorrosive to an
aluminum surface.
And of these, only 2
demonstrate good
electrostatic

respect to reducing

sprays did not show
a fast voltage

however. The results
indicate that
antistatic sprays can
be used on a limited
basis where

contamination

corrosiveness, and

critical. Each
application is
different and proper

BUILDING? The next Bill Gates will not build an operating system. The next Larry Page or Sergey Brin won't make a search engine. If you are copying these guys, you aren't learning from them. It's easier to copy a model than to make something new: doing what we already know how to do takes the world from 1 to n, adding more of something familiar. Every new creation goes from 0 to 1. This book is about how to get there. ' Peter Thiel has built multiple breakthrough companies, and Zero to One shows how. ' **ELON MUSK**, CEO of SpaceX and Tesla ' This book delivers completely new and refreshing ideas on how to create value in the world. ' **MARK**

ZUCKERBERG, CEO of Facebook ' When a risk taker writes a book, read it. In the case of Peter Thiel, read it twice. Or, to be safe, three times. This is a classic. ' **NASSIM NICHOLAS TALEB**, author of The Black Swan **Extreme Toyota Springer** This book combines comprehensive multi-angle discussions on fully connected and automated vehicle highway implementation. It covers the current progress of the works towards autonomous vehicle highway development, which

encompasses the discussion on the technical, social, and policy as well as security aspects of Connected and Autonomous Vehicles (CAV) topics. This, in return, will be beneficial to a vast amount of readers who are interested in the topics of CAV, Automated Highway and Smart City, among many others. Topics include, but are not limited to, Autonomous Vehicle in the Smart City, Automated Highway, Smart-Cities Transportation, Mobility as a

Service, Intelligent Transportation Systems, Data Management of Connected and Autonomous Vehicle, Autonomous Trucks, and Autonomous Freight Transportation. Brings together contributions discussing the latest research in full automated highway implementation; Discusses topics such as autonomous vehicles, intelligent transportation systems, and smart highways; Features contributions from researchers,

academics, and professionals from a broad perspective. Brave New Car Schiffer Publishing Revolutionary information and communication technologies are contributing to dramatic changes in the competitiveness of global and local markets and in the way people conduct their business and everyday lives. The potential benefits and risks these changes present for developing countries and the economies in transition are enormous. This comprehensive, authoritative reference book examines the ways in which these powerful technologies are being harnessed to

development goals, helping to reduce the risk of exclusion and create new opportunities for developing countries. The report emphasizes the urgency of developing new social and technological infrastructures to help ensure that new technologies are used effectively. It also offers guidelines and practical steps that can be taken by stakeholders to shape their future innovative knowledge societies. SERI Quarterly Penguin Conquer the most essential adaptation to the knowledge economy The Fearless Organization: Creating Psychological Safety in the Workplace for Learning,

Innovation, and Growth offers practical guidance for teams and organizations who are serious about success in the modern economy. With so much riding on innovation, creativity, and spark, it is essential to attract and retain quality talent—but what good does this talent do if no one is able to speak their mind? The traditional culture of “fitting in” and “going along” spells doom in the knowledge economy. Success requires a continuous influx of new ideas, new challenges, and critical thought, and the interpersonal climate must not suppress, silence, ridicule or intimidate. Not every idea is good, and yes there are stupid questions, and yes dissent can slow things down, but talking through these things is an essential part of the creative process. People must be allowed to voice half-finished thoughts, ask questions from left field, and brainstorm out loud; it creates a culture in which a minor flub or momentary lapse is no big deal, and where actual mistakes are owned and corrected, and where the next left-field idea could be the next big thing. This book explores this culture of psychological safety, and provides a blueprint for bringing it to life. The road is sometimes bumpy, but succinct and informative scenario-based explanations provide a clear path forward to constant learning and healthy innovation. Explore the link between psychological safety and high performance. Create a culture where it’s “safe” to express ideas, ask questions, and admit mistakes. Nurture the level of engagement and candor required in today’s knowledge economy. Follow a step-by-step framework for establishing

psychological safety in your team or organization Shed the “ yes-men ” approach and step into real performance. Fertilize creativity, clarify goals, achieve accountability, redefine leadership, and much more. The Fearless Organization helps you bring about this most critical transformation. The White Coat Investor Independently Published As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the

confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz -- rich cars, poor quality. There's only one Saturn you should buy. Toyota -- enough apologies: "when you mess up, 'fess up."
