The first graduate text to address health literacy in the aging population Low health literacy is a critical issue among adults, with over one third found to have difficulty understanding such basic information as that found on prescription bottles. This is the first graduate textbook to address key health literacy issues as they affect the health and wellbeing of the aging population. Embracing a topic spanning numerous disciplines, it features a dynamic, multicontextual systems approach and includes contributions from renowned scholars and practitioners in gerontology, public health, social work, nursing, and other

related fields. The text emphasizes increasing health literacy among older adults through the use of technological tools and features, the most current research, and evidence-based programs and practices. The book provides expansive coverage of the intersection of technology and health literacy, highlighting innovative approaches and discussing how to use technology with resource-limited groups. The text gives special consideration to rural, impoverished, culturally diverse, and low-literacy elders and presents gold standard intervention programs and models. Also covered are the policy implications of programs focusing on increasing health literacy and future directions for meeting the Healthy People 2020 initiative. Case studies, review questions, learning objectives, and supplemental PowerPoint presentations will reinforce learning. Key Features: Provides a one-of-a-kind, multidisciplinary survey of the key health literacy issues of older adults Focuses on increasing health literacy across the disciplines Addresses a priority area of Healthy People 2020 Incorporates research and practice from gerontology, psychology, public health, social work, sociology, medicine, and nursing Includes case studies, review questions, learning objectives, and PowerPoint slides for assisting instructors

E-Commerce Strategy: Text and Cases provides the fundamental literature required for graduate students and

practitioners to understand electronic commerce. Each chapter provides clearly designed learning objectives and review questions to highlight the major topics and goals. This book covers many of the new innovations and technologies that have been established for e-commerce site development. Unlike similar books, topics such as e-channel adoption, factors affecting e-commerce adoption, and strategy design are reviewed in greater depth. Additionally, the book examines areas not normally covered like open source, online research, and peer-to-peer systems. E-Commerce Strategy: Text and Cases is divided into two parts. Part 1 examines the evolution of e-commerce, analyzes different sectors such as B2B and m-Commerce, and explores the challenges they face. Case studies of well known companies reinforce the concepts learned to demonstrate both successes and failures in the field. Part 2 deals with developing strategies in e-Commerce and looks at future trends including Web 2.0. Overall, the useful guidelines provided should prove valuable to students and researchers in the field.

The third edition of this textbook comprehensively discusses global supply chain and operations management (SCOM), combining value creation networks and interacting processes. It focuses on operational roles within networks and presents the quantitative and organizational methods needed to plan and control the material, information, and financial flows in supply chains. Each chapter begins with an introductory case study, while numerous examples from various industries and services help to illustrate the key concepts. The book explains how to design operations and supply networks and how to incorporate suppliers and customers. It examines how to balance supply and demand, a core aspect of tactical planning, before turning to the allocation of resources to meet customer needs. In addition, the book presents state-of-the-art research reflecting the lessons learned from the COVID-19 pandemic, and emerging, fast-paced developments in the digitalization of supply chain and operations management. Providing readers with a working knowledge of global supply chain and operations management, with a focus on bridging the gap between theory and practice, this textbook can be used in core, specialized, and advanced classes alike. It is intended for a broad range of students and professionals in supply chain and operations management.

The two-stroke engine is widely used in both motorcycle racing

and kart racing, and in very large numbers in model car, boat and aircraft competition. The mechanical simplicity of the two-stroke engine gives it tremendous appeal, and makes it a tempting target for tuning operations, but the key to successful design, development and modification is knowledge of the engine's operating principles. This in-depth technical study of two-stroke theory and practice is intended to help would-be engine tuners to better understand the engine and the processes taking place within it, and thereby to obtain improved performance.

This book presents innovative intelligent techniques, with an emphasis on their biomedical applications. Although many medical doctors are willing to share their knowledge – e.g. by incorporating it in computer-based advisory systems that can benefit other doctors – this knowledge is often expressed using imprecise (fuzzy) words from natural language such as “small,” which are difficult for computers to process. Accordingly, we need fuzzy techniques to handle such words. It is also desirable to extract general recommendations from the records of medical doctors' decisions – by using machine learning techniques such as neural networks. The book describes state-of-the-art fuzzy, neural, and other techniques, especially those that are now being used, or potentially could be used, in biomedical applications. Accordingly, it will benefit all researchers and students interested in the latest developments, as well as practitioners who want to learn about new techniques.
