Over the last 15 years, privacy actions have been recognised at common law or in equity across common law jurisdictions, and statutory privacy protections have proliferated. Apex courts are now being called upon to articulate the law governing remedies, including in high-profile litigation concerning phone hacking, covert filming and release of personal information. Yet despite the practical significance of the courts' approach to damages, injunctions and other remedies for breach of privacy, very little has been written on the topic. This book comprehensively analyses these developments from a comparative perspective and provides solutions to issues which are coming to light as higher courts forge this remedial jurisprudence and practitioners look for guidance. Significantly, the essays are important not only for what they say about remedies, but also for the attention they give to the nature of the new privacy actions, providing deep insights into substantive law. The book includes contributions by academics, practitioners and judges from Australia, Canada, England, New Zealand and the United States, who are expert in the legal disciplines implicated by privacy remedies, including torts, equity, public law and conflict of laws. By bringing together this range of perspectives, the book offers authoritative insights into this cutting-edge topic. It will be essential reading for all those seeking to understand and resolve the

new issues associated with privacy remedies.

In chassis development, the three aspects of safety, vehicle dynamics and ride comfort are at the top of the list of challenges to be faced. Addressing this triad of challenges becomes even more complex when the chassis is required to interact with assistance systems and other systems for fully automated driving. What is more, new demands are created by the introduction of modern electric and electronic architectures. All these requirements must be met by the chassis, together with its subsystems, the steering, brakes, tires and wheels. In the music industry, the days of deals in smoke-filled back rooms are all but over. Artist development happens on the streets, not at major labels. And the old-school "professional" managers are stepping down, one by one, to cozy retirements funded by decades of commissions from successful clients. With fewer and fewer "lifers" available to take on new clients, what's an emerging artist to do? Likewise, how does an aspiring artist manager get a start without the connections and influence required of their predecessors? Music business manager and consultant Joe Taylor Jr. set out to answer these questions for a member of his staff. The result? Over 160 pages of nuts-and-bolts advice for the novice music manager, or for any musician looking to boost their success team by adding homegrown management to the mix.
