GM LS-Series Engines Cengage Learning

Ford FE engines, which were manufactured from the late 1950s all the way through the mid-1970s, were designated as the large-displacement engines in the Ford lineup. FE means Ford Edsel, and reflects an era when Ford sought to promote the Edsel name. The design of these engines was implemented to increase displacement over its predecessor, the Y-Block engines of the previous decade. Early models were fairly modest in displacement, as were most big-blocks of the era, but they grew quickly to fill the needs of rapidly changing chassis requirements and consumer demand for larger vehicles. As it grew, the FE engine performed admirably as a heavy passenger car and light truck engine. It also became quite accomplished in performance circles, winning the 24 Hours of Le Mans, as well as powering Ford's muscle car and drag racing programs in the mid- to late 1960s. In this book, you will learn everything you need to know to rebuild one of these legendary engines. CarTech's unique Workbench series format

takes you step-by-step through the entire rebuilding process. Covered are engine identification and selection, disassembly, cleaning, parts analysis and assessment, machine shop processes, replacement parts selection, re-assembly and start-up/break-in techniques. Along the way you find helpful tips on performance upgrades, trouble spots to look for, special tools required, and professional builder's tips. FE master, owner of Survival Motorsports, and veteran author Barry Rabortnick shares all of his tricks and secrets on building a durable and reliable FE engine. Whether you are simply rebuilding an old truck for reliable service use, restoring a 100-point show car, or building the foundation for a high-performance street and strip machine, this book will be an irreplaceable resource for all your future FE engine projects.

If Amazon can't win in China, can anyone? When Amazon CEO Jeff Bezos visited China in 2007, he expected that one day soon China would be a double-digit percentage of Amazon's sales. Yet, by 2019, Amazon, the most powerful and successful ecommerce company in the world, had quit China. In *Winning in China: 8 Stories of Success and Failure in the World's Largest Economy*, Wharton experts Lele Sang and Karl Ulrich explore the success and failure of several well-known companies, including Hyundai, LinkedIn, Sequoia Capital, and InMobi, as more and more businesses look to reap profits from the demand of 1.4 billion people. Sang, Global Fellow at the Wharton School of the University of Pennsylvania, and Ulrich, Vice Dean of Entrepreneurship and Innovation at the Wharton School, answer four critical questions: Which factors explain the success (or failure) of foreign companies entering China? What challenges and pitfalls can a company entering China expect to encounter? How can a prospective entrant realistically assess its chances? Which managerial decisions are critical, and which approaches are most effective? Sang and Ulrich answer these questions by examining the stories of eight well-known and respected companies that have entered China. They study: How Norwegian Cruise Line's entry into China displays how cultural differences can boost or sink different companies; How Intel, one of the oldest, most respected firms in Silicon Valley, thrived in a country that seems to favor agile upstarts; How Zegna, the Italian luxury brand, has emerged as another surprising success story and how it plans to navigate new headwinds from the COVID-19 pandemic. Through these engaging and illuminating stories, Sang and Ulrich offer a framework and path for organizations looking for a way to successfully enter the world's largest economy. History can be a teacher, and China, a country with 3,500 years of written history, has much to teach.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

A closer look at Toyota's quality and lean manufacturing problems—and the powerful lessons and warnings they represent. To see why this is a concern, consider the primary objective of the Toyota system/lean/JIT...
