Soccer has turned into a multi-billion-dollar industry. Professionalism and commercialization dominate its global image. Yet the game retains a rebellious side, maybe more so than any other sport co-opted by

---

money makers and corrupt politicians. From its roots in working-class England to political protests by players and fans, and a current radical soccer underground, the notion of football as the "people's game" has been kept alive by numerous individuals, teams, and communities. This book not only traces this history, but also reflects on common criticisms: soccer ferments nationalism, serves right-wing powers, and fosters competitiveness.

Acknowledging these concerns, alternative perspectives on the game are explored, down to practical examples of egalitarian DIY soccer!

Soccer vs. the State serves both as an orientation for the politically conscious football supporter and as an inspiration for those who try to pursue the love of the game away from televisions and big stadiums, bringing it to back alleys and muddy pastures. This second edition

has been expanded to cover events of recent years, including the involvement of soccer fans in the Middle Eastern uprisings of 2011-2013, the FIFA scandal of 2015, and the 2017 strike by the Danish women's team.

From the bestselling author of *The Power of Habit* comes a fascinating new book exploring the science of productivity, and why, in today's world, managing how you think--rather than what you think about--can transform your life. Productivity, recent studies suggest, isn't always about driving ourselves harder, working faster and pushing ourselves toward greater "efficiency." Rather, real productivity relies on managing how we

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety

features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection

Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Caterhams are a new take on the classic Lotus Sevens and are found on racetracks and twisty roads around the world. Caterham Sevens is the story of a former Lotus dealer, Graham Nearn, who saw the potential of a hand-built sportscar which its creator, Lotus founder Colin Chapman, was about to discard. Nearn bought manufacturing rights from Colin Chapman, and

by developing ever more powerful versions for more than 30 years, turned Caterham into one of the world's most prolific and affordable sports-racing cars. Widely recognized as the standard work on the history of Caterham and its cars from the original Lotus Seven of 1957 and its Caterham derivative of 1973 to the latest Cosworth-powered Caterham CSR of 2005. This edition is updated with 64 pages of additional material. 2nd ed.

A fresh historical and theoretical exploration of the much-debated, but still elusive, question of the Korean divide. In contrast to much of the literature on the divide, which deals with state-building on the two sides of the Demilitarized Zone, this book sheds light on the slow, but steady process of

---

homogenization between the two estranged peoples, as accelerated after the end of the Cold War and especially after the inauguration of President Kim Dae-jung in 1998. Providing immense empirical detail as well as theoretical debate on the ideas in policy shaping in South Korea, the book presents a rich 'history of enemies' and covers issues including: an overview of the structural shift and the rise and fall of identity groups in South Korea history of 'enemy-making' and 'peace-building' North Korea's external relations with the US, Japan and Europe Hyundai's groundbreaking, cross-border tourism and other economic cooperation projects the lingering nuclear weapons crises. By focusing on the question of identities, the book presents a new approach on one of the most important legacies of the

Cold War and threat to peace in the contemporary world: the divided Korean peninsula. As such it fills a major gap in the literature, utilizing new theoretical and empirical frameworks to deal with the Korean division and its future implications in East Asia.

The Walking Dead #72 John Wiley & Sons

A joy-inducing illustrated book about New York City in the ingenious style of William Steig's classic CDB! Just as there are few cities as storied and replete with life as New York City, there are few illustrators or writers who have charmed as many generations as William Steig. To Molly Young and Joana Avillez, a connection between the two seemed obvious, and so D C-T! ("The City!") was born. Using a playful phonetic language first invented by Steig in his now classic 1968 book CDB!--but which in today's world of text message and internet shorthand feels uncannily contemporary--Young and Avillez tell a

---

different story on each page of this collection of illustrations stuffed to brim with humor and cleverness: • "S L-I-F!" (It's alive!) A boy shouts gleefully at a pile of rubbish seething with rats • "I M B-Z" (I'm busy) Declares the phone-wielding businesswoman to the would-be mugger • "R U I?" (Are you high?) Asks the clerk at a bodega to the blissed out shopper Brought to life in Avillez's distinctively ebullient and droll style are precocious pets and pet-owners, iconic architecture, and startlingly intrepid anthropomorphic rats. At once recognizable, and imagined like never before, are the surprising, intoxicating, and not-always-entirely-welcome sights, sounds, and smells of New York City. Full of wit, romance, and sheer delight, D C-T! is both an affectionate portrait of the visual cornucopia that is New York City and a gracious love letter to the great William Steig, sure to enchant readers young and old alike just as his work has for half a century.

The electric vehicle offers many promises-increasing U.S. energy security by reducing petroleum dependence, contributing to climate-change initiatives by decreasing greenhouse gas (GHG) emissions, stimulating long-term economic growth through the development of new technologies and industries, and improving public health by improving local air quality. There are, however, substantial technical, social, and economic barriers to widespread adoption of electric vehicles, including vehicle cost, small driving range, long charging times, and the need for a charging infrastructure. In addition, people are unfamiliar with electric vehicles, are uncertain about their costs and benefits, and have diverse needs that current electric vehicles might not meet. Although a person

---

might derive some personal benefits from ownership, the costs of achieving the social benefits, such as reduced GHG emissions, are borne largely by the people who purchase the vehicles. Given the recognized barriers to electric-vehicle adoption, Congress asked the Department of Energy (DOE) to commission a study by the National Academies to address market barriers that are slowing the purchase of electric vehicles and hindering the deployment of supporting infrastructure. As a result of the request, the National Research Council (NRC)-a part of the National Academies-appointed the Committee on Overcoming Barriers to Electric-Vehicle Deployment. This committee documented their findings in two reports-a short interim report focused on near-term options, and a

final comprehensive report. Overcoming Barriers to Electric-Vehicle Deployment fulfills the request for the short interim report that addresses specifically the following issues: infrastructure needs for electric vehicles, barriers to deploying the infrastructure, and possible roles of the federal government in overcoming the barriers. This report also includes an initial discussion of the pros and cons of the possible roles. This interim report does not address the committee's full statement of task and does not offer any recommendations because the committee is still in its early stages of data-gathering. The committee will continue to gather and review information and conduct analyses through late spring 2014 and will issue its final report in late summer 2014. Overcoming Barriers to Electric-

---

Vehicle Deployment focuses on the light-duty vehicle sector in the United States and restricts its discussion of electric vehicles to plug-in electric vehicles (PEVs), which include battery electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs). The common feature of these vehicles is that their batteries are charged by being plugged into the electric grid. BEVs differ from PHEVs because they operate solely on electricity stored in a battery (that is, there is no other power source); PHEVs have internal combustion engines that can supplement the electric power train. Although this report considers PEVs generally, the committee recognizes that there are fundamental differences between PHEVs and BEVs.

someone who is much more than just the guy who sings for Iron Maiden. " —Loudwire A long-awaited memoir from the larger-than-life, multifaceted lead vocalist of Iron Maiden, one of the most successful, influential and enduring rock bands ever. Pioneers of Britain's nascent Rock & Metal scene back in the late 1970s, Iron Maiden smashed its way to the top, thanks in no small part to the high-octane performances, operatic singing style, and stage presence of its second, but twice-longest-serving, lead singer, Bruce Dickinson. As Iron Maiden's front man—first from 1981 to 1993, and then from 1999 to the present—Dickinson has been, and remains, a man of legend. But OTT front man is just one of the many hats Bruce wears. In addition to being one of the world's most storied and well-respected singers and songwriters, he is an airline captain, aviation entrepreneur, motivational

---

speaker, beer brewer, novelist, radio presenter, and features information on the strengths and film scriptwriter. He has also competed as a world-class level fencer. Often credited as a genuine polymath Bruce, in his own words (and handwritten script in the first instance!), sets forth many personal observations guaranteed to inspire curious souls and hard-core fans alike. Dickinson turns his unbridled creativity, passion, and anarchic humour to reveal some fascinating stories from his life, including his thirty years with Maiden, his solo career, his childhood within the eccentric British school system, his early bands, fatherhood and family, and his recent battle with cancer. Bold, honest, intelligent and very funny, his memoir is an up-close look inside the life, heart, and mind of one of the most unique and interesting men in the world; a true icon of rock.

This study attempts to fill the gap between the patterns of state-business relation and the structure of conglomerate organizational forms. Taking the South Korean chaebol and the Japanese keiretsu as example cases, the author argues that the Mafioso state in each country was responsible for the rise of these two different conglomerate organizations. In South Korea, the Mafioso state was hostile to big business (top-down manifesto state), forcing the chaebol owners to contribute illegal extracts from normal business activities.

---

The big business owners in return tried to cope with state hostility through diversification and size expansion (in other words, the chaebol). In Japan, the Mafioso state was not hostile to big business because both of them wanted to fend off external economic and political hostilities, mostly from the US (defeated manifesto state). Keiretsu managers voluntarily paid illegal extracts from normal business activities to the state, which in return protected such informal inter-firm alliances. The result was the keiretsu with diffused ownership and high levels of diversification.
